Bummer. Perhaps your reciever isn't as sensitive as my buddies. Or maybe your antenna isn't as hot, I don't know. It wasn't just one isolated incident. There are many. I could ask him to record a few more in a day or two, then I could post them if you like. They don't seem hard to record.

I realize that they aren't concrete proof of anything. Still, I think most people hear them and see the point I was trying to make.

Actually, as an amateur radio operater and professional police dispatcher, I think it is kind of need. Don't know what I'd do with one besides encase it in plastic and set it on my desk. I'm too much of a cheapskate to order one, though.

I can visualize a lot of wanna-be radio cops flashing it at illegal CB operators, though.

Tom

Excellent page, Tim! Thanks! I especially like the intro:

"... The 6LQ6 was not designed for linear amplifier service and, of
course, it was no match for popular high-priced power tubes, such as
the 3-500Z. The application of sweep tubes in amateur radio linear
amplifiers was clearly an engineering compromise dictated by economy."

>between the grid and plate, with the consequence that the grid to plate
>capacitance is reduced.... combined with Grid Shielding between the
>cathode and the plate which make your much touted neutralization
>unnecessary.

The reason that no neutralization is needed for a grounded-grid
amplifier is because the output is in phase with the input, which

means that you don't get regenerative feedback. It has nothing to do with grid shielding. Your lack of theory is showing, Skippy.

In a common-cathode amplifier, however, the screen and supressor do shield the grid from the plate, and Cgp for a pentode is much lower than for a triode. But in the class of pentodes, the Cgp of a sweep tube is characteristically high (as I pointed out earlier), which is why it requires much more neutralization than an RF pentode.

>Triode connected tetrodes (grounded grid) show a degree of improvement
>in distortion figures as opposed to grid driven service.

Yes they do, primarily because of the very low impedance required for the input, and the fact that the input power is carried through as a portion of the output power. Not because of grid shielding (LOL!). But then again, the grid-current distortion is much greater from a sweep tube than from an RF power tube because sweep tubes aren't designed for smooth transition into grid-current conduction -- and configuring a sweep tube as a grounded-grid triode doesn't change that fact.

>What might be called more passive gain operation of the screen and
>supressor grids in an AB2 amplifier, does not deny their actual operating
>
>shielding function and reduced Cgp in the grounded grid circuit.

"Passive gain operation"? Where do you come up with this shit, Skippy?

>> even though it's clearly designed as a triode. Or maybe you can

>> manuals (and ALC circuits to the radios) for their sweep-tube radios
>
>Pretty sly... but not sly enough. You jump around a lot and omit very
>significant details...
>
>First off, the topic was classic grounded grid rf amplifiers, in specific
>
>AB2 operation.

WRONG! The topic was the comparison of sweep tubes to properly designed RF power tubes in RF power amplifiers. You accuse ME of being sly when it is YOU that is trying to change the subject?

> Now you want to jump over to a Swan Radio... tis not
>the same Grounded grid animal Frankie... Oh, but you failed to mention
>
>that.

No, I didn't fail to mention that. But I'll say it again just in case you didn't understand it the first time: Swan radios used sweep tubes in common-cathode configuration, not grounded-grid as they did in their amplifiers. I exampled both their radios and amplifiers for comparison purposes. You mean to tell me that you were so confused as to the conversation that you couldn't figure that out?

>Homey ain't playing your smoke screen game.

The smoke screen is coming from your camp, Skippy: You keep trying to narrow the topic down to grounded-grid amplifiers only. Doesn't really matter tho, since your theory on grounded-grid amplifiers sucks just the same.

>In short, all mfgrs used what they thought the most practical part and
>circuit
>trade offs... which probably included many short cuts... You claim to be
>a big time
>broadcaster type... ever seen a station take shortcuts..?

The tradeoff was based on cost, and that's all. The buyer sacrificed linearity and spectral purity in order to get a cheap amp.

>The Swan Radios are not grounded grid circuits... as we have been taking
>here. But you want to interchange sidebar off topic circuits.... Nope,
>"wouldn't be prudent at this conjecture.."

That has been the discussion all along, why change now?

>ALC is bad news for most all radios... dated technology that really
>didn't
>/ doesn't work well for the most part. Another topic thread please...

Whoa! The basic ALC circuit works just fine for what it was intended, it works within it's limitations, and is VERY MUCH used even today! It's FAR from being "dated technology"! And it's used in both grounded-grid AND common-cathode amplifiers! You are WAY off base here, Skippy!

>> (that is, explain why they needed to do that if sweep tubes are so
>> adept at RF amplification?). And you have yet to find a TV that uses a
>> 6146 as a sweep tube, or a currently produced RF amplifier that's
>> legal for use between 24 and 35 MHz.
>
>Because they work pretty well in the intended application... what part
>of denial do you live in..?

No denial here: the intended application is an inexpensive amp with the trade-off of spectral purity and linearity.

> I probably won't find a TV set with a 6146
>on
>board... but you boat doesn't float unless you go back to that repost
>over and over.... like I should reprint your multiple "grid tied to the
>plate"
>posts over and over. Hey, what text I reposted would probably work....
>what you directly posted would fail every time... big time tube failures
>cost money.

The difference, Skippy, is that I admitted my mistake, which you have failed to do until now.

>So I made a few inquiries... turns out I can't find very many current
>FCC certified Amp mfgrs and no current certified amplifier builders
>for 24-35 Mhz applications. Not a cost effective place to be these
>days... HF & VHF Amplifier production in general is down...

Let's see, you are claiming that there are no legal amps for 24 to 35
MHz because amp production is down? How about because the amps are
illegal? Doesn't that strike you as a better reason why they aren't
being manufactured? Duh...!

>But pre ban amplifiers are still legal and available on the
>used market. There is no significant circuit difference from the
>mentioned
>35-54Mhz TPL amplifiers I provided Ebay Auction examples of; and
>their pre ban cousins. Nothing wrong with a legal used pre ban
>amplifier.

Provided it is type-accepted/certificated for use on the service, and
that such authorization is still valid. But note the difference here,
Skippy: the prohibited frequencies are 24 to 35 MHz, and the amps you
mentioned are 35 to 54 MHz. Don't you see something wrong with that?
Or did you really think that I wouldn't check?

>> So come on, Skippy, you aren't just full of bullshit, are you? Or
>> maybe you are ready to admit that you really don't know shit about the
>> amps that are so deserving of your approbation. Well, I don't think

>> your obvious bias in favor of poor RF engineering!
>
>Wow Frankie' you sure hit the low bar language toilet... a clear sign
>that you are on shaky ground...

Hmmm... despite my ability to back up my arguments with facts and
valid theory while you can't, just because I used the word "shit" a
few times means that -I- am on "shaky ground"? ROTFLMFAO!!! (guess
what the "F" stands for?)

> One might conclude that all the
>mfgrs who made sweep tube amplifiers, the many handbook projects
>and similar practical easy to construct rf AB2 g-g circuits contradict
>you. Of course, you are right, they are all wrong...

Your implication is that I am saying that these circuits don't work, when in fact they do. What I am saying is that sweep tubes don't work nearly as well as do properly designed RF power tubes, which is why the VAST and OVERWHELMING MAJORITY of manufactured RF amplifiers (both external and integrated) and radio handbook projects that use tubes use the latter!

>> BTW, you STILL haven't answered the question, "Do you have a financial
>> interest in the popularity of sweep-tube amplifiers"? So will that be
>> a 'yes', a 'no', or a 'no comment'? I'm betting the latter.
>
>Your news reading program a bit whacked Frankie..? I answered
>quite some time ago. Now explain to us why a yes or no answer would
>make any difference...

Simplification in the face of obfuscation. So what's the answer? And you STILL haven't described your "classic" and "properly designed" sweep tube amp. Well?

One thing I find interesting about this newsgroup is how contemptuous the CBer's treat anyone who suggests that some CBer's operate illegally on 10 meters. I can understand the resentment toward Aaron Voobner & perhaps a few others who are obnoxious, but it seems that most of the CBer's here get quite defensive.

Now I don't have anything against someone who wants to run a little power, nor do I care about anyone who wants to operate on "extra channels" provided they stay out of the ham bands. I also understand that many hams tend to look down upon CBer's like parents do children. But my attitude has always been live and let live. However, when someone points out that this or that is illegal, they get jumped on.

Just my observations.

Tom

> and no one cares if they talk there or not.

Well they'd probably say anything to make a sale. But it's my guess that the trucker would have to know a little about "extra channels" or 10 meters to pay $200-$300 for an "export radio" as opposed to a little over $100 for a good quality legal CB. At any rate, the responsibility for operating legally should be up to the individual operating the radio. I'm sure if a trucker buys an "export CB" or 10 meter radio, or has a legal CB modified for "extra channels," it's not his intention to operate legally.

> it really is up to hams like Jerry to

The way you worded this implies that you are not licensed. Do you have a ham license?

Whoah there Tom, it's true I don't give "respect" to illegal CBers.
But why do you find it obnoxious? It might be obnoxious if I was
trying to stop them from posting their opinions. But I don't. In fact,
anyone is free to post anything they want in defense and support of
illegal CB. You can even give the illegals some "extra" respect to
make up for my lack of it. You might even get a few recruits for the
Pirate Radio world in the bargain. It's a win-win situation :)

The way I worded it implies only this: I think Jerry has every right
to get the word out re 10 meter intrusion. So does anyone else who is
concerned with CB. Seems to me that agreement or disagreement with my
statement about Jerry is the appropriate issue here, not if I have a
license or not. Or are you just being...."obnoxious"?

Ham Radio is some weird cult. And, it's a boring cult. If you don't conform to the Ham conventions, you are not a "true" Ham.

Operating on 11m is highly discouraged. Ham vendors will offer a range of crystals with a continuous range of frequencies, but with the 11m band missing.

Hams are a pretty pathetic group as a whole. Hams need to feel superior so they can claim they are better than CBers. Some claim Morse Code makes them superior, so they will not be CBers. This does not make sense to me.

Many get their thrills from contesting. Contesting is making as many contacts as possible within a given time period. Hams call "CQ CQ" and wait for a response. After the contact is made, call signs are exchanged, the contact is logged into a spreadsheet, and the Ham looks for more contacts. It gets boring after five minutes. Many Hams get some kind of thrill from contesting. Ham Radio should be more interesting.

If you ask ANY question in a supermarket, you would get the same reaction. It has nothing to do with CB. People are there to buy food, not for CB.

>Why have you chosen CB as your hobby?

What makes CB so special that its a hobby? Isn't it just operating a radio. Is FRS (Family Radio Service) or walkie talkies essentially the same thing? You don't call these hobbies.

Automechanic or sports qualify as hobbies. How is CB a hobby?

And how is it different/better/worse than Ham Radio?

Oh dear... he keeps changing that, too.

> etc. Stick them in to separate folders,
> > including the DELETE folder. You never even see the junk show up,

As long as all the junk always has the same e-mail addy, nicname,
subject, or body text.
Oh yes, very useful... just like a chocolate teapot.

But then George knows that, which is why he changes his nic and
e-mail in his headers.

> > You can create just about any message rule you
> > want.

Any? Look more closely, the list of possibilities is not that large...
1. Specified newsgroup... great for deleting a whole newsgroup
or crossposted messages, not a person.
2. From line... George keeps changing this.
3. Subject line. Again, not for blocking a person... just deleting
certain subjects, like "FA", "OT" or "porn".
4. Specified account. This refers to YOUR accounts, so can mark
or delete your own messages.
5. Age of message. Once again, not for people, this is to mark or
delete old outdated messages.
6. Number of lines... To delete large messages, not people.
7. All messages... not much of a "filter"... huh.

It should also be noted that these rules are applied AFTER downloading the message, so your system is still kept busy downloading rubbish that you will not read, then deleting it. Therefore, the file size rule is rather pointless.
As you will notice, I am using OE6, older versions may be more limited.

The only real "blocking" works by e-mail address, which he keeps changing.

Unless you can state a "rule" that would have blocked every one of georges posts this year, then I suggest that you are talking from the incorrect orifice.

BTW: You are still blocked, and now Georges latest "nic" is too.

Brainbuster.

> would benefit to some extent; the user obtains a greater knowledge and
> understanding of their hobby, interference into the ham bands is reduced,
> and potential health and safety problems are reduced.

I see two main problems...

1. Enforcement.
To make this work, licensing would have to become a requirement
once more. Without a licence system, there is no way to know who
has passed and no reason for anyone to bother.

2. CB is Non-technical.
CB is not meant to be a technical interest. It is there for "citizens",
not engineers, technicians, etc. If people want to take a test, they
will become Amateurs. To put examinations in place would just
make CB like another Amateur service.

In the end, it will still not stop the illegal use, people know that they
should only use the allocated frequencies and power levels. So, it would be
a pointless task with high costs.

Regards,

Peter.

Hello Ryno:

Avanti 170 5/8 GP, PDL-II, Moonraker 4 & 6 Hub's are are available at Coppers I think.

But be advised the Moonraker 6 has two different ID sizes, 1 5/8" and 1 3/4"
Inside Diameter.

I have my machinist working a new set of hubs from billet aluminum, we'll see what they cost to make in quantities. Probably pretty expensive.

Bad choice; auto mechanic is a money-making vocation, not a hobby
unless you're a teenager as a rule.

or sports qualify as hobbies.

Maybe school sports or "professional" wrestling. Try telling that to a
NFL quarterback or linebacker!

How is CB a hobby?
>
> And how is it different/better/worse than Ham Radio?

That's obvious: No license is required for CB. Better/worse is just an
opinion.

Once again Aanal Aaron does his famous patented "chicken side-step"
when asked a question. Har de har.

So from your statement above, you agree that YOU have NO "right to get
the word out re 10 meter intrusion" since you have no license to
operate there, yes?

So what is this Steve Parks call? I never heard of him, QRZ database shows no hits for a Steve Parks. I have never lived in Ohio. Thought you said I lived in Mo. You are so far off base it is pathetic. My call is a 5 land call if you think that will help you any.

From: n2uhcNOSPAM@yahoo.com >(Tom Sevart) <
>One thing I find interesting about this< >newsgroup is how contemptuous
the CBer's< >treat anyone who suggests that some CBer's< >operate
illegally on 10 meters.<

Care to be more specific? Painting with a wide brush right off the bat
is never a good thing and it merely lends a false credibility to your
claims, albeit very temporary.
Since it hasn't happened, my hazard guess is you are too biased to form
an objective opinion,,,,,I base this on your "hunting activities" as a
(cough) *registered monitor*. Why would rude behavior interesting?
According to the hammies preaching legalities, cbers imitate
hammies.....clean your own back yard, it's much stinkier than cb, and
before you disagree, do the math of hammies vs. estimated cbers, then
take into consideration cb is jammed into 40 channels while soma hammies
have what have self-described their freqs. as "endless" and
"limitless"...as if it was the be-all.

>I can understand the resentment toward< >Aaron Voobner<

Ahhh....so you are an educated hammie. Excellent. Perhaps you can be
educated on what takes place in here, not what meets the eye.

>& perhaps a few others who are obnoxious,< >but it seems that most of
the CBer's here get< >quite defensive.<

That is usually a normal, basic human reaction when
attacked.....really.

>Now I don't have anything against someone< >who wants to run a little
power,<

Now, before we proceed, you must be made aware that several hammies have
claimed this very thing, while their practices and past posts were
completely contradictory to what they now suggest and as such, needed
shown their own posts, as they claim they don't exist. You can see
plenty of this from hammies (mostly nocodes and Arron's posse that
pledged to hassle the group), but there is an upperclassmen or 2 that
thought they were untouchable and thought they would join the cber
harassment campaign,,,they were spanked as well.

>nor do I care about anyone who wants to< >operate on "extra channels"
provided they<
>stay out of the ham bands. <

Some hammies don't have this wisdom. We have a plethora of nocodes, such
as Lelnad KCLDO and Dogie Adair N8WWM that wet themselves regularly over

this noncb problem of intruders on 10 meter. Pretty funny when they can't even upgrade in order to use these frequencies. Their agenda is highlighted by the fact that they don't care about protecting hammie radio or cleaning it up....theirs is only to try (and fail) at harassing cbers.

>also understand that many hams tend >
>to look down upon CBer's like parents do< >children. But my attitude has always been >liveand let live.<

Ha! I have used those EXACT words before and several hammies took issue with it.
Glad to see an upperclassmen showing some sense and setting an example for the juvenile-type nocodes to follow..

>However, when someone points out that this<
>or that is illegal, they get jumped on.<

Only when it is intentionally redundant.

>Just my observations.

Stick around. Your observations will be honed like never before.

No work required. I'm always upfront about the truth. Maybe that's what
keeps you lapping at my heels so forcefully.

> First time
> he admitted to being a federal criminal after attempting the martyr
> role........

Martyr role? To the best of my knowlege, I'm still alive and firing on
all 8 cylinders.

> His intellect is also waning badly. There is NO difference as far as the
> FCC is concerned.

You might want to explain that to the FCC agent, who once commented to
me that my solution to the problem of a malicious sociopathic CBer, was,
in his words, "clever". You see, once you fall under the auspices of
part 15, you are no longer "jamming", you are "conducting on air
propagation experiments, and morse code practice", much like kiddie
walkie talkies.

> jamming is jamming and it makes you a federal criminal

Removing a much greater disruptive force from the local community was
worth it, especially since the FCC didn't seem concerned enough to
respond to numerous complaints.

> (according to your own words) anti-social, and your mind is full of
> criminal intent and contempt.

Not at all. The logic is that the needs of the many, outweigh the needs of the few (or the one). Eliminating a sociopathic Cber, who contributed nothing to the local area, but hate and discontent, by utilizing low power signals, which took away his ability to wage verbal war on other law abiding Cbers, was something that resulted in a positive improvement for the community. One person suffered so that the majority could be free to converse freely. A good trade in my book.

> The hypocrisy shines in this statement as
> you choose what rules are ok to disregard for yourself while accusing
> others doing the same thing of being a federal criminal.

Eliminating a troublemaker is the same thing as blatently disregarding the rules with regard to high power and illegal frequency operation (and then flaunting it like a badge of honor)? I think not.

Once again, you try, but as usual, you fall far short of your goal of maligning me. If you were a person of decent moral character, you might have a chance. But you, a person, guilty of violating federal rules, and someone who demonstrates frequent examples of anti-social behavior, including a lack of respect for other's rights, is in no position to judge the actions of others.

Dave
"Sandbagger"

No. As stated, it is all return fire.
If the hypocrites crying the most about "netcops" would obey rules themselves, there would be no need of them to worry about "netcops".
George wrote:

>Can't the same then be said for the Hams and other Cbers who are against illegal CBing and breaking FCC rules. If they kept their noses clean perhap you wouldn't have to hear aaron preach , or jerry tell how many times he called riley this week. 10-4?
<<

Not at all. Comparing the two is null and void. Jerry may be a bit enthused about popping cbers, at least he is honest in his motives.

>funny thing is twisty you have tried,<

Wrong. Once again, as is with reality in the media, the burden of proof is on the claimant, (the newspaper, broadcaster, reporter, writer, etc.) which in this case, happens to be you.

>Twisty Oh it is true, remember the one when you emailed @home and said something about a copyright on your Sporadic Waves ?article?
<<

No, I don't.
Which addy are you claiming I emailed? If you lost an ISP for screwing
around, it is possible your claim is true.....if you did not lose an ISP...again, show me the money, 'cause it doesn't exist......

>No twisty didn't lose any Isp's went from @home to comcast, when @home went belly up.
No I didn't say I lost an Isp, I said you were also one who has sent letters to peoples ISP's, hence when you sent one to @home.
<<

And again I say, if you didn't lose an ISP, then it wasn't I that complained. Perhaps it was the publisher....the copyright belongs to him and messing with a copyright intentionally is a violation and will result in a monetary fine.

>Does that jog the ole mammory <

No....again....show me da' money.
one thing
that remains constant among your crowd......many bum claims that you guys throw out there hoping one will somehow stick.

>Twisty, I am part of no crowd, I run alone my >fly fishing friend, so
>please don't throw around accusations which >you cannot prove,

Now you are beginning to sound like the Hypocrite Hall. You need shown where you defend the same malcontents repeatedly? There are many examples. While you may not feel this constitutes proof, it speaks plenty. Trying to distance yourself from these lowlives is not done by running to their defense when they are caught with their hand in the cookie jar
and attempting to redirect the subject, as you have so often done, but your attempt at placing distance between yourself and these blights to hammie radio is noted.

>now what i told you in this thread is absolutly true you know it and i know it. I have never turned anyone in to the FCC, or anyone else for that matter. I may not like what the keyclowns are doing to the Band and the intruding on 10 meters and make it know in this NG.
<<

Then by that admittance, your defense of their actions and sins can be seen in your running to their aid, desperately attempting a redirect, usually to the poster that just solidly placedthem in the correct light they belong.

>But, I can assure you letter will be sent to local leo's, and the FCC re: certain
individuals and how they are bleeding over, running hi power, bothering the neighbors etc.
<<

Hahhahahhaahhahaha.....get over yourself, junior. You must be really pissed to be sending
what some stranger said on usenet (hahhaahahahahahahha) to the FCC...hahahahahhahaahahhahahah!
I have no clue what you are referring to, but
do you honestly think you are first do send one of my posts to Riley? Hahhahhahaahahh! Better yet, your mistake that I somehow would give a damn is quite refreshing....Dave Hall subscribes to this sorry train-of-thought.
I don't even know what "letter" you are referring to. I wrote no one a letter from this group. Mail away.

>Ya know what It might not do a damn thing<

You are correct, not only will it not do a damn thing, it CAN'T do a damn thing for several examples.............

>but ya know what what if it
>does.

haHAHHAHAAHHAH! always holding on to that "what IF" scenario.

>The way i figure it <

...has usually been wrong.

>one good shake deserves another. whadda >ya think! hell it might get my rocks off, just like >when these bozos complain to Isp's lol. Ok Ill >be back i gotta type some letters.
>-G-

Make sure you mention 27.555.
Just tell them to tune in to 555....no need for anything else...but knock yourself out.

>Landwhale has tried, Moped has tried to terminate my ISP, and what keeps happening Nothing they laugh at the complaints, they are frivolous complaints as i said twisty I have never sent anyone e mail or had any contact with anyone other than thru this NG. So what is
there excuse?
<<

Asking me makes as much sense as asking Lelnad why he claimed he had me tossed from webtv. I knew if I remained quiet long enough he would babble on and make such statements for us to reflect upon and enjoy.......you can see "arron" practicing this patented "twist" move as we speak, only not from voobner@yahoo,,,that ones really gone...oh, and the ones sharkie had yanked for harassment. It's real simple..debate intelligently or not at all...or at least hold your temper. Ever mindful of the irony of the question that continues to haunt several angry hammies, it must be posed again....AND AGAIN.....
WHY IS THE ART OF COMMUNICATION LOST ON SOME OF THOSE WHO ARE SUPPOSEDLY LICENSED FOR IT?

First off Dick, it's go fuck, not PHUQQ, FUCK yourself.
Second, I'm no hillbilly but if you really want to find out come down to Springfield MO anytime and find out for yourself, pusswad.
Third, my coax is more than connected. Ask stations across the US.
Lastly, no freebanders waste their time above 27.800 (give or take .100) cause it's a lot of Mexicans/Spanish speaking stations above there. You are talking about a rare, select group of truckers, that are using the 28 MHz spectrum for truck to truck comm. That's it butthead. No freebanders. Just your paranoid, delusional, warped exaggeration to get attention to your bullshit crybaby, squeaky wheel rants.
So Dick, shut the fuck (not PHUQQ) up.
Alan at least makes a concerted effort to discuss it. You on the otherhand are blatantly interested only in provocation not the issue.
Drop dead, Dick(head).
>From: "Richard Cranus" >richardcranus@hotmail.com
>Oh go phuqq yourself you stupid hillbilly >your coax isn't plugged in then >people all across the country have heard >people at different times on 28 085 >truckers or freebanders you call it.

From: vshah101@aol.com (Vshah101)
I agree but you know even if no unliscenced operaters ever went up to 10 meters, there would be something else to bitch about, like freebanding, non-linear amps, overmodulation, etc. There will always be hams that piss on this newsgroup, don't worry about it though, in the long run it has a negative effect on thier own hobby.
==========
Enlightened hammies realize this. It is the reason the likes of Lelnad C. Scott KC8LDO and Dogie Adair N8WWM were shunned by other hammies.
==========

Ham Radio is some weird cult. And, it's a boring cult. If you don't conform to the Ham conventions, you are not a "true" Ham.
==========
This HAS been shown valid to some extent, evidenced by the socialistic nature of some hammies.
==========
Operating on 11m is highly discouraged. Ham vendors will offer a range of crystals with a continuous range of frequencies, but with the 11m band missing.
Hams are a pretty pathetic group as a whole. Hams need to feel superior so they can claim they are better than CBers. Some claim Morse Code makes them superior, so they will not be CBers. This does not make sense to me.
Many get their thrills from contesting. Contesting is making as many contacts as possible within a given time period. Hams call "CQ CQ" and wait for a response. After the contact is made, call signs are exchanged, the contact is logged into a spreadsheet, and the Ham looks for more contacts. It gets boring after five minutes. Many Hams get some kind of thrill from contesting. Ham Radio should be more interesting.
==========
Repeater work is boring. Long distance low power with no assistance other than your rig and antenna is my poison.

I know, but fun to jerk his chain and see him get his shorts in a
wad. Mopie likes to post to the auto racing groups, and Steve
Parks is a racer, I doubt that Mopie is Steve Parks only maybe in
his fantasies.
He still won't post an address, but wants me to post my call which
will give him and anyone else access to mine. Nice try though.

Twistedhed wrote:
Where did this come from? My server must be dropping posts again. For the record, there is a difference between jamming a repeater, which serves the needs of many users, and plugging the ears of an overly obnoxious CBer, who's inability to operate properly, is a detriment to the rest of the community. In the former case, the jamming is creating the interference. In the latter case, the jamming solves it. Call it vigilante justice if you will, but since the FCC saw fit to abandon the CB band, many of us had to resort to tricks like this to keep the animals at bay.
At least planting a low power jammer, did not require property trespass, or destruction of property (like many who brag about tearing down antennas). Furthermore, running at a power level of less than 100 mW, makes the device fall under part 15 rules, like a kiddie walkie talkie.
Dave
"Sandbagger"
==========
Nice work in eliciting the truth from the "hypocrite" Hall.

>No work required. I'm always upfront about
> the truth.

If that's true, you won't mind answering what you refused to answer in email. Not so long ago you made a claim that you have only changed the way you access this group once before, only your posts and headers show otherwise....your latest is with the "slurp" feed and is quite a recent addition. Is this another of those times where you can't possibly be asked to remember such things or another of those times where you are caught not telling the truth?

>Maybe that's what keeps you lapping at my >heels so forcefully.

Rare is the person that sees my posts as forceful. Add more yin and lose the yang.

First time
he admitted to being a federal criminal after attempting the martyr role.....

>Martyr role? To the best of my knowlege, I'm still alive and firing on all 8 cylinders.<<

Figure of speech. Firing on all 8? Nah,,,merely another incident where you fail to see yourself as others do. Your lies precede your reputation.

Your intellect is also waning badly, Dave. There is NO difference as far as the FCC is concerned.

>You might want to explain that to the FCC agent, who once commented to me that my solution to the problem of a malicious sociopathic CBer, was, in his words, "clever".
<<

Ok, I accept your offer.. Name him or provide me with his name and number.
Jerry0, being a by-the-book type guy, I am certain would be interested in one of Riley's own guys condoning (according to your implication) breaking the very law he is sworn to upheld. How do I get in touch with him and what is his official title and rank?

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:20287-3DC28F39-11@storefull-

>Twisty Oh it is true, remember the one when you emailed @home and said
something about a copyright on your Sporadic Waves ?article?
<<

No, I don't.
Which addy are you claiming I emailed? If you lost an ISP for
screwing
around, it is possible your claim is true.....if you did not lose an
ISP...again, show me the money, 'cause it doesn't exist......

>And again I say, if you didn't lose an ISP, then it wasn't I that
>complained. Perhaps it was the publisher....the copyright belongs to him
>and messing with a copyright intentionally is a violation and will
>result in a monetary fine.

No twisty they sent me the email of the complaint guess who sent it *you*
you had who complained that by me reposting your sporadic waves article it
was against copyright laws. In fact twist ill dig up the post to this NG
where I first asked you about it, the fact remains the "complaint" by you
went unfounded as you see that article was already posted to this NG and I
just reposted it, didn't cost me a dime.

Now you are beginning to sound like the Hypocrite Hall. You need shown
where you defend the same malcontents repeatedly? There are many
examples. While you may not feel this constitutes proof, it speaks
plenty. Trying to distance yourself from these lowlives is not done by
running to their defense when they are caught with their hand in the
cookie jar
and attempting to redirect the subject, as you have so often done, but
your attempt at placing distance between yourself and these blights to
hammie radio is noted.

>now what i told you in this thread is absolutly true you know it and i
know it. I have never turned anyone in to the FCC, or anyone else for
that matter. I may not like what the keyclowns are doing to the Band and
the intruding on 10 meters and make it know in this NG.
<<

>Then by that admittance, your defense of their actions and sins can be
>seen in your running to their aid, desperately attempting a redirect,
>usually to the poster that just solidly placedthem in the correct light
>they belong.

Twisty, I run to who evers aid I think is correct, If you posted something that I agree with I will certainly back you, regardless of what ever has happened in the past, not because you chose to stand with one side or another. It is called not being a hypocrite, others in this group should learn that words meaning.

>But, I can assure you letter will be sent to local leo's, and the FCC re: certain
individuals and how they are bleeding over, running hi power, bothering the neighbors etc.
<<

Hahhahahhaahhahaha.....get over yourself, junior. You must be really pissed to be sending
what some stranger said on usenet (hahhaahahahahahahha) to the FCC...hahahahahhahaahahhahahah!
I have no clue what you are referring to, but
do you honestly think you are first do send one of my posts to Riley?

Twist, I guess some of the others who cry to Isp's are really pissed to send what some stranger said to their ISP in an effort to silence what they have to say, btw I never mentioned sending anything to the FCC about you don't start twisting things unless you are one of the culprits.

>I don't even know what "letter" you are referring to. I wrote no one a
>letter from this group. Mail away.

Twist you most certainly know the *complaint* you sent to @home regarding my posting of your sporadic waves article. I will show you by your own admission.

HahahahHHAH! always holding on to that "what IF" scenario.

yes just like the guys who cry to Isp's, who say " what if they cancell his account , "Oh won't I be so lucky!"

>The way i figure it <

...has usually been wrong.

>one good shake deserves another. whadda >ya think! hell it might get my rocks off, just like >when these bozos complain to Isp's lol. Ok Ill >be back i gotta type some letters.
>-G-

Make sure you mention 27.555.
Just tell them to tune in to 555....no need for anything else...but knock yourself out.

>Landwhale has tried, Moped has tried to terminate my ISP, and what keeps happening Nothing they laugh at the complaints, they are frivolous complaints as i said twisty I have never sent anyone e mail or had any contact with anyone other than thru this NG. So what is
there excuse?
<<

Asking me makes as much sense as asking Lelnad why he claimed he had me tossed from webtv. I knew if I remained quiet long enough he would babble on and make such statements for us to reflect upon and enjoy.....you can see "arron" practicing this patented "twist" move as we speak, only not from voobner@yahoo,,,that ones really gone...oh, and the ones sharkie had yanked for harassment. It's real simple..debate intelligently or not at all...or at least hold your temper. Ever mindful of the irony of the question that continues to haunt several angry hammies, it must be posed again....AND AGAIN.....
WHY IS THE ART OF COMMUNICATION LOST ON SOME OF THOSE WHO ARE SUPPOSEDLY LICENSED FOR IT?

>the guys from this Ng don't tools crying to >Google? Crying to other
Isp's ? hey shouldn't >these net cops get a life?

We have one. It is when cretins such as discussed impinge on our lives
with actual actions, not mere words and violate rules, when the
complaints are filed. It is the preferred method according to all domain
rules. SInce it is the correct thing to do, taking issue with the rules
and correct chain-of-command procedures when filing complaints, makes
you a sociopath, according to the Hypocrite "Dave" Hall.

>claims, albeit very temporary.

Well I meant to use a generalization, but I probably should have qualified it with "not all posters here act this way." Basically what I meant is that some posters seem to take offense at hams who want to get illegal operators out of the 10 meter band. It seems like a rule should apply: If you're not doing it, don't worry about it. But some people here have gone so far as to claim that all the illegal operations on 10 meters are made up by hams.

>Since it hasn't happened, my hazard guess is you are too biased to form
>an objective opinion,,,,,I base this on your "hunting activities" as a
>(cough) *registered monitor*.

No, I'm keeping an open mind here. The "registered monitor" thing is only a "callsign" used to send reception reports to shortwave stations. I don't pursue any "hunting activities" of any sort, unless it's hunting for stations to listen to.

>clean your own back yard

I believe this is what it being attempted to accomplish.

>That is usually a normal, basic human reaction when
>attacked.....really.

I understand that. But as I stated above, don't take offense at those of us who'd like to clean up 10 meters if you're not operating there illegally.

>>Now I don't have anything against someone< >who wants to run a little
>power,<
>
>Now, before we proceed, you must be made aware that several hammies have
>claimed this very thing, while their practices and past posts were
>completely contradictory to what they now suggest

I used to have a bunch of CB friends back around 10 years ago. I was a licensed ham then, and operated CB on the side. Most, if not all of them, operated radios that would be considered illegal, using more power than legal and unauthorized frequencies. They often brought them (linear amplifiers too) to me to work on. I even hooked up a linear amplifier in my brother-in-law's semi. I didn't operate illegally, but I didn't care if someone else did. I think you'll find I'm not as anal retentive as some

other people here. I only care if they operate in the ham bands.

>>However, when someone points out that this<
>>or that is illegal, they get jumped on.<
>
>Only when it is intentionally redundant.

Once again, I understand this. But sometimes it seems like someone can just make a solitary mention of this or that illegal practice and get flamed.

IF you don't think quite a few members of Congress think protection of radio spectrum is impor-
tant, then you ought go to google.com and type in Greg Walden (R-Oregon). Then look on his page to see how many MCs have signed onto the Amateur Spectrum Protection bill and the Exemption from private neighborhood covenants bill. Quite a number think this is important enough to co-sponsor or vote for in order to allow Amateur Radio to fulfill its traditional emergency role.
Amateurs are striking while the iron is hot! While there are plenty of sponsors for bills favorable to
Amateur Radio, it is a good time to FULLY protect the spectrum from unlicensed operators.

Riley is not elected; he is a career FCC employee. Your predictions of a
wholesale change
in Presidents and Congressional makeup are a mite premature. George Bush has
the highest
popularity rating of any recent President at mid-term.

Tim,
You're right, it's coming, but I don't know about shortly. I am studying for my ticket. I do want HF priviledges though, so I am also in the process of learning code. CW sounds kinda fun, to me. I love the idea that many people think it's hard. That motivates me.

I'm in the process of studying for a couple of other networking certs, so my ham studies are slowed quite a bit.

> Yea.....reading between the lines it is easy to see he has tipped
> his hand several times. Alan's name is as valid as "Aaron's".

Twist,
I hope you're not suggesting that my name isn't Alan Strawinski. It really is. I chose to use my real name so that people would not scoff at me for hiding behind an alias. I'm thinking that hasn't worked too well.

I know that everybody here wants to know who's in which camp. I definetly lean towards the pro-legal side of things, but that's just who I am. I've always been that way. It doesn't mean I hate people who aren't. I've discovered neat and fun things about many people here:

Tim appears to be having "More fun than a human being should be allowed to have", as Rush puts it. That's great. It's great to see someone who enjoys life and having fun. Our idea of fun probably differs (Im a computer geek, remember <g>) but I enjoyed seeing some of the pictures he had up on his website - he appears to be living it up on a regular basis. Cool.

Know what I think makes Mopar the coolest? He's got a Roadrunner! I am insanely jealous. I want a '69 so bad I can taste it. It's kind of a dream car to me. He's one lucky SOB to have one. Shoot, we could probably hang out all day and just talk about his car. I'd say the hell with CB, Ham and legal discussions, this dude owns a kick ass car!

Landshark lives near me, and we need to hook up one of these days. Why? He's into motorcycles! He's got a kick ass Buell that he's done some work to, and I've got a neato custom with a Buell motor. Plus he has a great sense of humor. I love every one of those funny emails he sends me. I

think we'd have alot of fun if we met up. Hey, maybe when my bike gets fixed, we can go on a run sometime.

I could go on, but my post is long enough. Take it easy, guys.

> in one of Riley's own guys condoning (according to your implication)
> breaking the very law he is sworn to upheld. How do I get in touch with
> him and what is his official title and rank?

Well, it was over 20 years ago, so I doubt if he's still with the FCC.
But his name was Ennis Coleman. I don't have a number. Like I said, it
was over 20 years ago. even if you managed to find him, I doubt if he'd
remember a casual conversation that happened that long ago.
And again, no law was brokem as the jammer was a low power part 15
device, which was being used to test local propagation conditions. A
perfectly legitimate use. It's a shame that we were so close to that
poor CBer (snicker!). Believe me, I know what you're trying to do, but
if you knew this guy, you wouldn't be defending him or berating the
actions that our local group did to get rid of him. I made the device,
and another guy planted it. It lasted for almost a week before we had to
change batteries. In about a month, the grade "A" A-hole was gone. I
guess it never occured to him to use his mobile. Good thing too, or we
would have had to risk attaching another device to his car.

Dave

>

Oh, crap I thought you did. I wonder who I was thinking of?

Still, no matter. your '66 is a sweet ride. You sold a Charger?!!! What
year was it? I love sublime green. Everybody always seems to go for some
variation on either red, blue, black or white when they paint a car.

I had a '65 Galaxy (428 donated from another junk yard beauty), but it
was a bit too much of a project for me. It was one of my first cars. When
I was younger, I didn't have the space or the money to restore it. Then I
had the money, but no space to work on it. Then I got the space and lost
the extra money as a result. Then I got the money, but lost the time.
Heh, story of my life. So I sold it. I've always secretly been a Mopar
guy, and felt like I was settling for the Ford. Don't get me wrong, it
was a fantastic car. But I've had my sights set on a '69 RoadRunner for a
while now. I still don't have the time to do a full on restoration, so I
think I'll buy one that's basically done. I won't have the satisfaction
of saying "I did that", but I will have the satisfaction of driving it :)

I might even look into a Sattelite, and drop a 440 in. It's basically the
same damn car, and a WHOLE lot cheaper :)

You're right, often I'm not tactful in response to the tactless. If tact (and the lack of it) is a concern for you, perhaps you ought to start reading the posts of those blatently disregarding the rules with regard to high power and illegal frequency operation and then flaunting it like a badge of honor.

Well I'm just saying that when you call people federal criminals to their face (relatively speaking), you're sure not to win them over to your way of thinking. I'm just saying there's better ways to get your point across than the way you've been doing it.

Tom

Hey, good for you. I hope you find that the license tests aren't really
that hard for anyone who has a basic understanding of how radio works. And
you'll find that CW really isn't that hard, either. Learning the characters
is easy. Building up speed is hard. But with practice you'll find yourself
getting faster.

Ok, I accept your offer.. Name him or provide me with his name and number.
Jerry0, being a by-the-book type guy, I am certain would be interested in one of Riley's own guys condoning (according to your implication) breaking the very law he is sworn to upheld. How do I get in touch with him and what is his official title and rank?
==========
>Well, it was over 20 years ago, so I doubt if >he's still with the FCC. >But his name was Ennis Coleman. I don't have >a number. Like I said, it was over 20 years >ago. even if you managed to find him, I doubt >if he'd remember a casual conversation that >happened that long ago. <<

Well, so much for that suggestion.

>And again, no law was brokem as the jammer >was a low power part 15 >device, which was being used to test local >propagation conditions. <<

It was an intent to jam, which you clearly stated. That is in violation of FCC rules and regs.
Part 15 makes no allowances for interference intended for a cber.

>A perfectly legitimate use. It's a shame that we >were so close to that >poor CBer (snicker!). <<

Poor cber? Appears you were/are one of those "poor cbers"...even as far as being a dealer/repair shop that has provided illegal services in srtcit violation of FCC rules. See, besides trying to take your advice concerning asking the FCC agent, I was also taking your advice as to not believe everything I was sent....so I admit, that claim had me curious, so I went and looked for myself. Are you still in business?

>Believe me, I know what you're trying to do,<

You do? I thought I was trying to take you up on your offer of asking him, but several reasons why that would not be possible and the fact that he couldn't lend credibility by verifying your story came up when I actually tried to do what you suggested.

>but if you knew this guy, you wouldn't be >defending him or berating >the actions that our local group did to get rid of >him.<<

Hey, the law is the law, remember? You are a sociopath (your words) if you deviate or make allowances, such as selectively ignoring laws certain laws, like dx or going above the posted limit in the desert. What's good for the goose.....

>I made the device, and another guy planted >it.

So it was also a conspiracy to break the law.

> lasted for almost a
>week before we had to change batteries. In >about a month, the grade
"A" A-hole was >gone.<<

Remote car control, huh? Those aren't hard to make,,,,all you gotta do
is
buy one and, well, I have a friend in Texas that perfected this a long,
long time ago.

>I guess it never occured to him to use his >mobile. Good thing too, or
>we would have had to risk attaching another >device to his car. Dave
>"Sandbagger"<<

"Another" device? To his CAR? You broke several laws, dintcha?
In all seriousness.....I must admit you certainly have a knack for
arguing both sides of the coin.

But somehow you miss how "contemptuous" the alleged hambos are toward
CBers? If Aanal Aaron and Georgie-girl Busch and JJ and Frank weren't
so "contemptuous", maybe the others wouldn't be in return. Ya think?

> Now I don't have anything against someone who wants to run a little power,

I can respect you (and Jerry Oxendine) for stating your opinions. I
even agree with you. However, I cannot respect Aanal Aaron (who isn't
even an amateur), Georgie-girl Busch (who is supposed to be an Extra
class), Frankie (who is supposed to be a broadcast engineer but
doesn't seem to have a ham license), or some of the others because all
they do is troll and deliberately stir up trouble. Whether they're
right or wrong they lack tact and maturity, cannot conduct a
reasonable discussion, and resort to low-life smearing and bovine
excrement posts. Georgie-girl (WA3MOJ) cannot have a civil discourse
with anybody and has stated that he doesn't want to see CBers
"elmered" into amateur radio, contrary to the ARRL position. I guess
he thinks he's more important that amateur radio itself, huh?

Just my observations.

>Isp's ? hey shouldn't these net cops get a life?

We have one. It is when cretins such as discussed impinge on our lives
with actual actions, not mere words and violate rules,

>So does Jerry, Aaron, JJ, etc <

I don't place Jerry in that category. Jerry at least appears honest in
his motives, even if one (like myself at times) disagrees with his
motives.
Jerry has also never attacked on a personal note. He and I disagree on
several key issues, heatedly at times, but neither of us have called
each other names or made stupid cracks or remarks about our personal
lives outside our views of radio. He may seem radical to some of the
hard core cbers, but as you well know, many law-abiding cbers are viewed
the same way by some hammies, and several half-a-hammies.

>It is when Cb creetins with actions like >amplifier use?,

Excellent point.
What constitutes too much wattage? Is it not possible to achieve
broadcast quality and cleanliness on the cb channels or on the freeband
with less wattage, or the same wattage as some hammies achieve?

>with actions like freebanding,

Circular again, not to mention another subject in it's entirety. Very
much a debatable subject..such as you have your reasons and I have my
reasons why the FCC allows 555 to go unscathed.

>with actions like bleedover, with actions like >intereference. No these
are not mere words >and yes they violate rules.

Sure they do...IF and WHEN they occur.......running an amp does not
necessitate causing interference or hammies couldn't run them on 10
meter.

when the complaints are filed. It is the preferred method according to all domain rules. SInce it is the correct thing to do, taking issue with the rules and correct chain-of-command procedures when filing complaints, makes you a sociopath, according to the Hypocrite "Dave" Hall.

>The correct thing to do is also contact the FCC >and let them know as well

About what? Usenet topics? That since we enjoy talking about amps or freebanding that we are all guilty of doing it? C'mon!

Yes, but please note that the subject of federal crime usually comes
up only AFTER someone boasts that, for example, CB rules are
trivial...or the FCC doesn't care... or illegals are not doing
anything wrong, etc. etc. etc. In the context of these discussions,
what's wrong with telling someone the truth? Especially if they come
on like big bad tough outlaws, why be afraid of hurting their
feelings? CB rules have the power of federal law. We can debate the
semantics of this all you want, but the essential truth is that Part
95 rule violations are still federal crimes and they are being
enforced as such. Taking advantage of understaffing and
underenforcement to "get away" with operating illegally and then
thunbing your nose at the FCC is not something I respect. I can think
of no better way to get this point across than to express it DIRECTLY.

Dave, I did the very same thing about 15 years ago, and it worked admirably. Simply removed the single channel transmitter that was crystaled for one of the "A" 27 Mhz channels from a childs remote control, replaced the crystal with one for 27.185, added a 15 foot wire antenna, sealed the thing in epoxy, placed it in a Coke can with paralleled 9 volt batteries, also waterproofed, and planted it in a culvert that was at the end of his driveway. Drove the person nuts, and they thought it was a neighbor that was tired of TV interference. That thing would go almost 2 weeks on one set of batteries. Had lots of fun with that person!

Geez, Georgie-girl, don't you know where to use apostrophies when not to? "rants" is plural and doesn't require an apostrophy. "You're" is a contraction and DOES require one. I sure wish you could spell like an adult; you try to act like one!

And ask your buddy Aanal Aaron why he has to keep changing email accounts, will ya? It has nothing to do with "no luck of course". For that matter, why do YOU keep changing nics? Har de har.

Georgie-girl Busch WA3MOJ; another fine product of publik edjukashun.

: Frankly Frankie' "yeti@cet.com" wrote:
: The problem is your definition of 'sweep tube'. Because
: the sweep tube is typically a power pentode, you seem to classify all power
pentodes
: as 'sweep tubes', which is far from the truth.

At no time did I ever state or imply all power pentodes are sweep tubes. Your
twist of wording doesn't play here. ...where was that posted and when..?
Was not posted by me so don't make stuff up as you go along.

: The TRUTH is that sweep tubes were designed for one purpose only: they
: are optimized for use as horizontal deflection amplifiers at about 16
: kHz, which is a far cry from 27 MEGA-Hertz. This is demonstrated by
: examining the interelectrode capacitances for both types of tubes:

Depending on who's camp an rf person sits... "Sweep Tube" also defines a
Type or style of Beam Power Tube. Most RF and tube people would agree Sweep
"Beam Power Tubes" are constucted with very similar characteristics.

Continue the example through to a very similar tube, designed by GE only for
RF applications, never placed in a horizontal deflection amplifier application.
Said 8950 and similar types M2057 and the Yaesu S2001/6 (the Yaesu part number
might is
probably not exact) tubes meet all the requirements to function as a sweep tube
and along with
the 8950, are pretty much a drop in replacement for sweep tube applications.

In short, they pass the sweep tube label muster test...

Amoung the RF crowd, the 8950 and other above mentioned tube types are
often called sweep tubes because they are more than casually similar.

Simple enough... can you dig it..?

: The input and output capacitances for a 6LF6 are twice that for a 6146,
: and the all-important grid-to-plate capacitance (the main factor that
: determines the maximum usable frequency) is more than TWELVE TIMES
: larger!

Again....
The topic is about RF Amplifiers in the HF and VHF Low frequencies, not
above 54Mhz. Input and output C values are quite usable with practical circuits
at 30Mhz. One also avoids most of the dangerous VHF parasitic problems
often found in poorly built 6146 circuits. A sweep tube homebrew advantage.
The well knownVHF mid band and higher Ft circuit construction and stability
problems of the 6146 are not a dominant concern of the sweep tube amp builder.

But "you knew dat... cause da babies chin, looked jus like the daddies'..." (ms cleo).

: Not only is the sweep tube non-linear at RF frequencies, it is
: also very prone to self-oscillation. They require a significant amount
: of neutralization just to get them to work on RF, linear or not!

You really are a piece of work Frankie...
Take a look at the majority of classic HF 3 to 30Mhz Amateur and CB grounded grid amplifiers.... sweep tube or not and tell us how many are neutralized..? Other than some much debated current circuits from Ameritron, few if any others are using Neutralization in grounded grid circuits. Goes for both Sweep and RF Designed tube g-grid amplifiers.

Remember, we're talking grounded grid rf amplifiers here... always have been until you start to wander... It's been proven many times over the 6LF6 and other sweep tubes work very at 30 Mhz, even higher. We don't need them to sing in the VHF High band... remember the decafe there mr broadcast...

No one claims anything more than Sweep tubes can work pretty darn well in good RF Amplifier circuits.

The 6146 tube is mucho more costly to use and quite overkill for the same circuit requirements... Amp builders simply deal with Input and Output C values as required... not the big deal you sing about.

No tube is a perfect linear device... but g-grid sweep tube amplifiers can easily be made which meet current FCC requirements and work very well for typical medium power Amateur Amplifiers. You appear to be very out of touchwith the real world frankie' boy. The rather rare Dentron GLA-1000C has a type acceptance number. A few were legally listed on Ebay some months back...

>
> The TRUTH is that some tubes are designed for general purpose use,
> while others are designed for very specific applications. RF power
> tubes were designed for RF power applications, and sweep tubes were
> designed for horizontal deflection amplifiers. True, some power
> pentodes will work in applications for which they were not intended,
>

Ah'ha..! there is a light at the end of the tunnel... thank god. You pretty much sum it up my point right here. Light the fireworks...!!!!

> but cannot be used AS IF that was the specific application for which
> they were designed. Sweep tubes and RF power tubes are, by and large,
> NOT interchageable as if they were designed for the same purpose!

No one here is trying to push RF power tubes off the map in lieu of using sweep tubes frankie... They are just an interesting part of current and past rf amplifier history... Up until recent times, sweep tubes were almost entirely off the radar map. But... we can now get them again from European Sources and they're very low in price.

> Now if you are wondering why I am hung up on this insignificant bit of
> information, it's because it's not insignificant at all. The
> difference is the difference between a clean signal and a signal
> loaded with harmonics, between an efficient and an inefficient
> amplifier, and between good and mediocre engineering practices.

Clean and dirty signals happen with all types of types of tubes. Good
engineering practices allow sweep tubes to make great AB2 amplifiers.
The same homework done for classic common cathode circuits gave
them a home in many tube type HF Amateur Tranceivers. The Dentron
GLA-1000c actually had an FCC type acceptance number...

The proof is in the pudding... the pudding can be measured with test
equipment.

>
> You have not mentioned one amplifier that's type-accepted/certificated
> for use between 24 and 35 MHz on the services for which you have a
> license, or for any other service on those freqs.

Motorola TLB6521A 25-30Mhz
Motorola TLB6522A 30-36Mhz
FCC License Designation CC1044 & CC1044C.

Just for giggles, let me throw out a legal "Linear Amplifier" used in a licensed
AM service.

Multitone TA8 : TA14 25-50Mhz

> It's simple logic, Skippy. Your license limits you to the use of
> equipment that's type-accepted/certificated for that service. There is
> no amplifier being manufactured that meets that criteria. Therefore,
> use of an amplifier on those frequencies, even WITH a license, is
> illegal because you would be using equipment that isn't type-accepted
> or certificated.

The key word is current manufacture... plenty of type accepted amplifiers
exist for legal operation... see the motorola unit above. No magic here.

> You can try and twist the rules all you want in order to justify your
> position Skippy, but the fact remains that amps on those freqs is
> illegal. Period.

Your statement should not be all inclusive... used type accepted amplifiers
are an easy find and legal to use.

On a sidebar note...
Out of curiousity, I called the FCC today to inquire if a currently made
type accepted amplifier could be retuned for an adjacent same service
allocation. The example are two nearly exact TPL amplifiers, one pre
78 ban, the other a current 35Mhz low limit certified amplifier. Less the
sticker on labels, one would be hard pressed to find a difference.
-
The unofficial opinion as of this morning is yes... a more formal official
answer is to arrive after some research by an FCC agent. I'll of course

report the official word when I receive it... should prove to be a nice
fly in the soup.

> There is no IB service listed by the FCC, and there are no licenses
> listed for the IB service. If you doubt that, go check the database
> yourself. Here's the link:
>
> http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
>

It's a nice web page... online... but the hard copies in my hands say otherwise...

I have the actual licenses... or unmodified photocopies of the originals...

Allow me to directly quote one...

"Radio Service : IB Industrial Business "

Sorry if actual paperwork doesn't work for you... If an FCC inspection happens
at your medium/low power broadcast station... you aren't going to show him a web
page url, or a print out from a web page url.

"Hard Copy Matters"

> >Where your going with your triode, tetrode and pentode mode questions is not
> >yet clear. If you can try to get past your dumb question line up to some

>
> It's very simple: The term "mu" is used to describe the amplification
> factor of a triode, and can be "high-", "medium-" or "low-mu", which
> are relative comparisons for all triodes. A pentode (or tetrode, beam
> power tube, sweep tube, etc.) can be connected and used as a triode,

Triodes also have transconductance... no big deal as you seemed to
want to make out of it in a previous post...

: in which case it is rated by it's amplification factor, or "mu", just like a
triode.
: The problem here is that you seem to think that a triode-connected pentode is
: somehow NOT working as a triode, and that the term "low-mu" describes
: something other than the amplification factor of a triode. You have yet to
: explain why they do NOT work as triodes, OR how a triode-connected
: pentode DOES work. But let me take a guess:

Part of the homework of building rf amplifiers is knowing High and Low Mu
issues related to rf amplifiers ... Tetrode tubes in some (not all) grounded
grid circuits operate as high mu triodes, bad news to some tube geometries.

In your ideal world of only RF Power tubes, some tetrodes don't play well
in certain grounded grid circuits... they go poof. Same issues can and do
occur with sweep tubes. In this case, ignoring the details will cost money...

: Grounded-grid operation eliminates the need for neutralization, and

Yes... a major advantage. Neutralization is a pain in the pazzoo, most
often easily avoided in grounded grid amplifiers.

: triode operation will linearize the operation of the tube. But this is
: at the sacrifice of efficiency.

No tube is an ideal linear device in operation... and triode operation is
not a restriction for acceptable linear service. Efficiency of a good
grounded grid sweep tube amplifier can be near 60% in clean AB2 linear
operation. Thats great results in the real world.

: The grid of a grounded-grid amplifier conducts for a considerable portion
: of the cycle.

Yep, we call that grid current remember... it should be understood and
kept within the device limits. That's why certain grounded grid circuits
are bad news... especially with specific types of RF designed and Sweep
tubes.

: RF power tubes designed specifically for grounded-grid operation
: have hefty grids that can dissipate that power, but sweep tubes don't.
: Therefore, the sweep tubes that are used as grounded-grid amplifiers must
: keep the grid current to a minimum.

The correct statement should say "keep the grid current within safe limits."

: There are only two ways to do this.

(Readers to this post..., a bit of free advice try to avoid using the
word "only" in your statements.)

: The first is to run the tube Class C (which, of course, is not linear).
: The second is by reducing the power gain of the tube EVEN LOWER than
: the typical gain of a grounded-grid amplifier, resulting in a very inefficient
: amplifier. Is THAT what you mean by "low-mu"?
-
Nope...
Its a starting point statement for anyone building a grounded grid rf amplifier
; to pay attention to the circuit, specifc to using sweep tubes, but not limited
to...
tetrode/pentode combinations as seen/used in some layout schemes. In specific,
some
combinations of grounded grid connections are very bad news for beam power
tubes, both your precious RF designed types and sweep tubes in general.
-

Have a good weekend everyone... back after this commercial break...
cheers

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:11109-3DC31961-121@storefull-

>It is when Cb creetins with actions like >amplifier use?,

Excellent point. What constitutes too much wattage? Is it not possible to achieve
broadcast quality and cleanliness on the cb channels or on the freeband with less wattage, or the same wattage as some hammies achieve?

More than 4 watts is too much. I am sure it is possible to get it but then that would put all of the current amp makers out of business since none of them falls in the broadcast quality and cleanliness.
Why do you always like to compare things to hammies, be a real man and stand on your own merits of Cbing. For christ sakes twist amatuer gear is supposed to meet specifications basment built amps don't.

>>with actions like freebanding,

Circular again, not to mention another subject in it's entirety. Very much a debatable subject..such as you have your reasons and I have my reasons why the FCC allows 555 to go unscathed.

Probably same as most lack of man power

>with actions like bleedover, with actions like >intereference. No these are not mere words >and yes they violate rules.

Sure they do...IF and WHEN they occur.......running an amp does not necessitate causing interference or hammies couldn't run them on 10 meter.

Again the comparision to hams, stand on your own twisty you'll be a better man for it.
Running an amp No it certainly doesn't necessitate interference but it usually is a big help, It doesnt really matter if it is 10 meters or 20 meters, Btw I talk on 10 meters with a 100 watt radio like most hams I talk to they use just the radio and no amp, and most ham amps have
Lc networks in them to lower harmonics, they run class ab1 instead of class c splatter boxes like most all Cb amps who have no filtering. I see very few mobile HF amps in use by hams I also have noticed from experiance less hams run an external amplifier they just aren't really needed.

>The correct thing to do is also contact the FCC and let them know as well.

About what? Usenet topics?

Nah not usenet

>That since we enjoy talking about amps or freebanding that we are all guilty of doing it? C'mon!

That wasn't you we heard talking to 22 steel was it? Talking about amps? Would you like to see some websites where they are sold? Freebanding so those times you said you spoke to others from this Ng must mean you were lieing as usual right toe? Cmon twist If you want to break the Laws stand up like a man, don't just say it is all talk now and don't say well the hammies are doing this or doing that. I really expected more from you twist I guess thats why you have never posted your name in here, you do have something to hide, all that tough talk about how you know what your doing is illegal well thats why don't you show us the real twistedhed, you know the guy who has that loose attitude on life who saysd what he thinks and does what he wants regardless of a few trivial FCC laws.

Yep, Dan; you are correct. We did have a KWM-2 in the 2nd position running into a 30L-1. The Heathkit was the 3rd position and was used for RTTY. The Collins rigs were very nice and would still make a darned good station today. I think (remember, this was 35 years ago!) there was a 250 (possibly 500) Hz filter for CW on the 32 receiver. Sweet.

Nope, look at the thread a little ways up where I tell Aaron that he lacks tact. I understand why he's reviled here. My concern was the way it seems that any ham gets treated here when they state that illegal CBer's are operating on 10 meters. It's almost like telling a Christian that Jesus didn't exist.

And perhaps the reason people resent you here is also because illegal CB operations is all you ever talk about. I've rarely seen a post from you (when you're not participating in arguments) that talks about anything else. I've asked you in the past what kind of radio equipment and antenna you use, yet you fail to answer. That leads me to think that you don't operate CB, I know you're not a ham, yet you are obsessed with illegal CB operators. Perhaps you're not really in person, but you seem to be a very peculiar person.

If I'm wrong about your actual participation in the radio hobby then I'm sorry, but that's the way you've come across.

I have a GE superbase which needs new clock switches. Someone tried to remove the case incorrectly, and mangled the switches underneath. They are the momentary switches on top of the case. Does anyone know if these parts are available through a parts distributor or if they are used on any other radio's. Someone told me that GE used them on certain alarm clocks but I can't seem to find out any information. Any help would be greatly appreciated. If you have a parts radio with these switches intact, I would also be interested. Thank you for
your reply.

116. Get a clue already, Skippy!

Newsgroup: rec.radio.cb
Date: 2002-11-02 08:02:26 UTC
From: yeti@REMOVEcet.com
Message-ID: <3dc385cf.15843500@news.cet.com>
Source record: 142702

Much of your bullshit is snipped because it has already been addressed in my other posts, (the ones where I answer your questions and avoid mine) and I'm tired of repeating myself every time you want to change directions. So...

<snip bullshit>
>Depending on who's camp an rf person sits... "Sweep Tube" also defines a
>Type or style of Beam Power Tube. Most RF and tube people would agree Sweep
>"Beam Power Tubes" are constucted with very similar characteristics.
<snip redundance nonsense>
>Simple enough... can you dig it..?

It doesn't seem to be so simple for you, Skippy. For instance, you certainly are having a hard time distinguishing between the terms 'beam' and 'power' when used with vacuum tubes. Here's a few snippets of your ramblings:

"...a beam power 'sweep' tube actually designed for RF Applications"

"The closest conventional sweep - beam power tube to the 8950 was/is the 6HF5"

"[the 8950] was designed by GE for beam power applications."

"... they are all in a similar class - family style. Beam power tubes, horizontal output tubes, sweep tubes... many can often be made to do similar things."

Now you made the statement that sweep tubes can be used in place of most any other power tube. You defended that statement by saying that most any power tube can be used as a sweep tube. And it's clear that you don't seem to know the differences between 'beam' tubes, sweep tubes, power pentodes, etc. So yes, Skippy, you DID say that any power pentode (or 'beam tube', or whatever term you use from day to day) is a sweep tube. And, of course, you are wrong.

BTW, it's also clear that you do not understand what a 'beam tube' really is. A 'beam tube' is a tetrode where the screen wires are hidden behind the grid wires, and have special plates that direct the electron flow into a 'beam' to the plate. This type of construction lessens the current on the screen and eliminates the supressor grid. But because of the beam-forming plates are tied to the cathode similar to a supressor grid, 'beam tubes' or 'beam tetrodes' are frequently called pentodes anyway.

Now there are plenty of power triodes, but they are NOT beam tubes. There are also plenty of power pentodes and tetrodes that are NOT beam

tubes. And yes, there are sweep tubes are NOT beam tubes. The 'beam'
tube is a sub-class of, not a synonym for, the power tube. Get it
right next time, Skippy.

>: The input and output capacitances for a 6LF6 are twice that for a 6146,
>: and the all-important grid-to-plate capacitance (the main factor that
>: determines the maximum usable frequency) is more than TWELVE TIMES
>: larger!
>
>Again....
>The topic is about RF Amplifiers in the HF and VHF Low frequencies, not
>above 54Mhz. Input and output C values are quite usable with practical circuits
>at 30Mhz. One also avoids most of the dangerous VHF parasitic problems
>often found in poorly built 6146 circuits. A sweep tube homebrew advantage.
>The well knownVHF mid band and higher Ft circuit construction and stability
>problems of the 6146 are not a dominant concern of the sweep tube amp builder.

Now where did I talk about parasitic oscillation? I didn't, Skippy
(and you keep accusing ME of trying to divert attention from the
topic!) I was talking about the high capacitance limiting the
practical frequency range of the tube.

<snip bullshit>
>The 6146 tube is mucho more costly to use and quite overkill for the
>same circuit requirements...

There are a LOT of manufacturers that disagree with you there, Skippy.
How about B&W, Collins, Globe, Gonset, Hallicrafters, Hamarlund,
Henry, Johnson, Kenwood, Millen, Morrow, etc... Are you even
suggesting that all, most, or even ANY of those very sucessful
companies (manufacturers of some of the very best ham radio equipment
ever made) designed their radios for overkill? You think that sweep
tubes are good RF tubes because they were used in a few low-end radios
and amps? Judas Priest...

Skippy, you REALLY need to sit down, shut your trap about what you
THINK you know, crack open your mind (if that's at all possible), and
LEARN the difference between what WORKS, what BARELY works, and what
WORKS WELL! sheesh...

<snip bullshit>
>> You have not mentioned one amplifier that's type-accepted/certificated
>> for use between 24 and 35 MHz on the services for which you have a
>> license, or for any other service on those freqs.
>
>Motorola TLB6521A 25-30Mhz
>Motorola TLB6522A 30-36Mhz
>FCC License Designation CC1044 & CC1044C.

I can't find those devices in the current database. Matter of fact, I
can't even find those model numbers anywhere. Are those authorizations
current? If so, how about a link? And isn't the license designation

prefix "CC" now defunct?

>Just for giggles, let me throw out a legal "Linear Amplifier" used in a licensed
>AM service.
>
>Multitone TA8 : TA14 25-50Mhz

Once again, the authorization is no longer valid.

You seem to be under the impression that once a device receives
type-acceptance/certification that such authorization lasts forever.
It doesn't.

>> It's simple logic, Skippy. Your license limits you to the use of
>> equipment that's type-accepted/certificated for that service. There is
>> no amplifier being manufactured that meets that criteria. Therefore,
>> use of an amplifier on those frequencies, even WITH a license, is
>> illegal because you would be using equipment that isn't type-accepted
>> or certificated.
>
>The key word is current manufacture... plenty of type accepted amplifiers
>exist for legal operation... see the motorola unit above. No magic here.

The authorizations have expired. The only equipment that Motorola has
authorized that runs over the CB are a few HF commercial radios and
cable devices, but no amplifiers. You can check the database yourself
if you don't believe me. Here's the link:

https://gullfoss2.fcc.gov/prod/oet/index.html

Now you can check it yourself whenever you think you have found a
legal amplifier. When you do, let me know.

<snip bullshit>
>"Hard Copy Matters"

I don't have a hard copy, so it doesn't matter at all. If you actually
had an IB license it would be listed with the FCC, but it's not. If
the license is current, then there should be some link you can provide
from the FCC site that confirms your claim about the IB service. Now
put up or shut up.

<snip bullshit>
>: triode operation will linearize the operation of the tube. But this is
>: at the sacrifice of efficiency.
>
>No tube is an ideal linear device in operation... and triode operation is
>not a restriction for acceptable linear service.

Jeez, Skippy, there you go again putting words in my mouth. Where did
I say that triode operation is a restriction? I didn't. Regardless, I
seem to recall that your cure for poor linearity from sweep tube
common-cathode amps was to stick a 10 ohm resistor between the cathode
and ground -- YIKES!!! Ungrounding a power RF tube, now THAT'S "bad

news"!

> Efficiency of a good
>grounded grid sweep tube amplifier can be near 60% in clean AB2 linear
>operation. Thats great results in the real world.

Except that AB2 isn't very clean from a sweep tube.

<snip bullshit>
>Nope...
>Its a starting point statement for anyone building a grounded grid rf amplifier
>; to pay attention to the circuit, specifc to using sweep tubes, but not limited
>to...
>tetrode/pentode combinations as seen/used in some layout schemes. In specific,
>some
>combinations of grounded grid connections are very bad news for beam power
>tubes, both your precious RF designed types and sweep tubes in general.

What "combinations" and "layout schemes" are those, Skippy? And can
your "precious" sweep tubes perform better under those "combinations"
and "layout schemes"? What circuits are "specifc to using sweep
tubes"? Actually, your whole statement doesn't make any sense except
to toss out a couple buzzwords and phrases. And you

---***>>> STILL <<<***---

haven't described your "classic" sweep tube amplifier circuit!

Thanks for your concern, Tom. But as you recall, your entry into this thread started off with an unsolicited potshot at me ("I can understand the resentment toward Aaron Voobner & perhaps a few others who are obnoxious"). Now you're looking to propagate an "ad hom" argument by steering the conversation onto a discussion about Aaron Voobner, his radios, and his antenna systems. And you're even resorting to the lame "you failed to answer such and such" nonsense that fuels so many of the meaningless arguments in here. You started an argument by calling me obnoxious. Now you're criticizing me for participating in arguments. Wierd contradictory behavior? You bet. And I'm not the only one that's noticed it.

It comes to a suprise to me that more SW pirates haven't tried around 26.000 Mhz. I was shocked and suprised to find out a few years ago that it's supposively part of an 11 meter international broadcasting band. Perhaps some cber's who would like to try their own hand at pirating can get a hod of an old 2950 or whatnot do some basic mods to power, plus a nic wiring job to a mi plug, and have some fun. It would be kinda neat to hear that on a weekend night.
Or who knows. Not many people use that "hidden" channel 27.145, so perhaps that could be a fun place for a few cb pirate radio types.....
Just some ideas

Hey there Georgie-girl; all you can do is change nics. All Aanal Aaron
ever does is run away like the whipped puppy he really is. He's got no
proof and has, in fact, been proven wrong about everything he's ever
posted.

You got a better estimate? Didn't think so.

Once again the famous patented "chicken side-step" from Aanal Aaron.
He can't discuss the topic, so he redirects. Bzzzzt! You lose. Again.
As usual. But at least he admits that he's tactless; that's a step in
the right direction.

Perhaps YOU, Aanal Aaron, should stop being so obsessed with "reading
the posts of those blatently disregarding the rules". Read something
you enjoy instead, for a change. Try alt.bitchnmoan; it's just your
speed.

BTW, where's the proof you said you would "Gladly" post? Haven't done
it, won't do it. Can't do it, can you?

You said it was fact Dickhead, now all of a sudden it is an estimate.
You ask me for an estimate, lol I would certainly say 10-15% of the US
population does not own CB like your assumption, that you claimed as fact.
But then again I wouldn't make a claim and call it fact then change it to an
estimate when called on it.

But, Tom: Aanal Aaron, Georgie-girl, and others aren't here to "make
friends and influence people". They're here to troll and start flame
wars. Georgie is allegedly an Extra-class ham, but he won't "elmer"
anyone into amateur radio; he'd rather be a jerk and make sure they
stay CBers (who'd want to bother going through the hassle of getting a
license to talk to someone like him?). That's the point of it all,
Tom.

Which is your exact reason for being in this NG, I have yet to see you make any friends even the keyclowns don't like you. So I'll ask again just why are you here?

>Georgie is allegedly an Extra-class ham, but he won't "elmer" anyone into amateur radio;

That's funny I took a group of 5 cbers to get their licenses about a year and a half ago, just shows what you really know.

> he'd rather be a jerk and make sure they stay CBers (who'd want to bother going through the >hassle of getting a license to talk to someone like him?). That's the point of it all,

The illegal ones who have no regard for law I sure would like for them to be Cbers. The legal ones who want to communicate like human beings they are more than welcome. Not sure what hassle getting a license is it is pretty easy you should try to get one sometime, hell they even give you the correct answers. Have you ever talked to me on the air? Oh that's right you dont' have a license and if you did would we get the same asshole who you are on this NG on the air. Probably somethings never change.

Ya'll will probably get a kick out of this story then...

Circa early 67
Place Bien Hoa RVN, runway area.

A Collins representive was putting on a demonstration of the strength of the equipment.

A C-130 cargo aircraft was to demonstrate the survivability of the equipment when air dropped using the standard out the rear end with parachute trick often used then.

The aircraft would fly at several hunderd miles an hour just above the runway and kick out the pallet loaded with various items...including the KWM2A, 516F-2 consule and the 30L-1 all packed in their individual Samsonite suitcases.

Of course being a military operation there were lots of delays. By the time the aircraft finally showed up for the drop we had been told the equipment was so tough that nothing could hurt it.

The C-130 rolled in... the pallet came out the back..the shutes deployed and the pallet skidded along the runway for several yards...and came to a halt next to a tanker truck full of JP-4.

Over we all went, anxiously opened the first suitcase...the Speaker Consul was perfect...not even a scratch. Impressed we then anxiously opened both the remaining suitcases.

The equipment looked great...except that every tube was either busted or flopping around inside. We looked at the Collins representive....and in true salesman style said " I never said those cheap tubes would make it"..

Marcy marcy me, good buddie. Ya'll gota copy on ... kinda silly, isn't it. Same with painting all the hams with a wide brush. Myself, I never cared for working DX. DX should imply 'long distance' yet it is used to mean 'rare'. One doesn't get meaningful contacts that way, but some folks enjoy collecting wallpaper. So let 'em. Myself, I'm content with 440 FM and have fun with the locals (and not so locals). Same thing could be said of CB. Some folks like shooting skip. I could ask the same question of both groups: "but what do you actually use it for?"

Dan, I got one on a salesman. He was selling some emc receivers (over $60,000). He stated they were so accurate that you could calibrate them on a commercial FM radio station. I simply asked if he would choose the single tone, I'd be happy to choose the deviation; otherwise he could pick the deviation and I'd pick the tone. Then let's see him calibrate it. Ohhhh .. the Bessel function. Ouch. No carrier.

This is actually a pretty interesting question. The answer is
simply...people. Individuals choose what interests them enough to make
a hobby out of it. That may not have been the intentions of the FCC at
the time of the CB's inception, but this is how the chips have fallen.

Normally, I wouldn't either, but you're failing to understand the point. For instance, there were multiple occassions where we wanted to communicate with a large group of family or friends. We only have a few radios but the other folks in the group did have FRS. We were able to communicate with them because of it. Also, if you have a group or induvidual who is unlicensed, then your only alternative is them using FRS. I normally don't think FRS useful, but under these circumstances, it was. Just because the original poster might not want FRS for his application, doesn't mean he won't use the ability to talk to those users who have no other choice.

It is a growing problem. You can find them all up and down the
band when 10 is open.

> I must admit
> that I finally heard some amateur activity at the low end of 10 meters

Right on, that will certainly help discourage use by illegal ops.
Just listen to 10 when there is a contest and the band is full of
hams, you will hear few illegal signals. But we still need to do
what Jerry O. does and report intruders, keep the problem before
Riley and company.

In my own, personal, case, I had to hear it for myself. And I finally
did hear something that sounded like it might be CBers at the low end
of 10 meters, so perhaps it is true. I still don't believe that it's
the huge problem these guys make it out to be, however. I must admit
that I finally heard some amateur activity at the low end of 10 meters
recently, too; CW on 28085 and RTTY on 28125. Congradulations, hams,
THAT's the way to keep "intruders" out of ten meters (and other ham
bands): USE IT instead of whining about it, especially on the UseNet
which most CBers have never even heard of!

Thats what happens when you turn the radio on and listen other than run the
vfo and say welp no one that I hear. I hear CW almost daily

> > THAT's the way to keep "intruders" out of ten meters (and other ham
> > bands): USE IT

That's one way to keep them out, the fact still remains if the band is
closed and it is not isn full use truckers and cbers have no right using it
so there still is a problem, perhaps we can leave a baby sitter there to
make it look like it is in use.

>
> Right on, that will certainly help discourage use by illegal ops.
> Just listen to 10 when there is a contest and the band is full of

(I x'd out a bit of your poor language)

You pretty much answer with song and dance and a lot of off topic diversions ... I'm still waiting to see you respond

to my questions about the at least two posts you made which instruct readers to tie grids to the plate for rf amplifier triode mode operation.

Why is this not bad information frankie...?

You wouldn't be repeating yourself if you answered the questions one

time.

> <snip bullshit>

> >Depending on who's camp an rf person sits... "Sweep Tube" also defines a

> >Type or style of Beam Power Tube. Most RF and tube people would agree Sweep

> It doesn't seem to be so simple for you, Skippy. For instance, you

> certainly are having a hard time distinguishing between the terms

> 'beam' and 'power' when used with vacuum tubes. Here's a few snippets

> of your ramblings:

Since your the only one having the hard time... let me reference the

source Materials. RCA receiving tube manual. ARRL Handbooks, W6SAI Handbooks

and a few others. The references above use both partial and specific terms. Your the current anal retent in the crowd...

> "...a beam power 'sweep' tube actually designed for RF Applications"

Yep, the 8950 and previously mentioned M2057 (and the Yaesu NOS

tube found in the FT-101 HF radios) power tubes are best described as

Sweep tubes. Although never found in sweep applications, the sweep tube label BEST & MOST ACCURATELY DESCRIBES the tube as applied to rf amplifier circuits. Anyone with experience with sweep tube rf amplifiers would not have a problem with statement. Dance and sing all you want, you just look the anal boob worried over trivial fine points.

> "The closest conventional sweep - beam power tube to the 8950 was/is

> the 6HF5"

So, what's wrong with the statement frankie..?

My opinion at the time of the statement yes... but technology moves on

and I've now found a much better drop in replacement (6.3v fil),

an original application sweep tube. I and many others have rewired

6HF5 applications over to the 8950. For cost reasons, we might now

rewire some 8950 circuits back to original sweep tube operation.

The procedure has been written in a few ARRL Hints and Kinks books through the years. So what does this do for you...? what point are you trying to make..?

> "[the 8950] was designed by GE for beam power applications."

Like you have, one can easily add or subtract words from the descriptions,
but the point in the original post was made. You just seem to want to nit pick

at loose label ends. I've done the same to you in past posts when you've

left specific words out of your replies. You just seem to get really excited over stupid things.

The only way I and others can respond is to clarify and update previous

topics when they become a problem. So far, I and others know of and

have no problems calling an 8950 a sweep tube. Svetlana provided me with four tubes designed for rf service that should directly drop into sweep
tube service. I also buy Russian made tubes which should drop directly

into
sweep tube service. I and others don't have a problem calling these rf designed tubes "sweep tubes" because they are near exact or similar in operation replacements found in Amateur RF Amplifiers built through the last 3 plus decades.

> "... they are all in a similar class - family style. Beam power

> tubes, horizontal output tubes, sweep tubes... many can often be made

> most any power tube can be used as a sweep tube. And it's clear that

> you don't seem to know the differences between 'beam' tubes, sweep

> tubes, power pentodes, etc. So yes, Skippy, you DID say that any power

> pentode (or 'beam tube', or whatever term you use from day to day) is

> a sweep tube. And, of course, you are wrong.

I don't agree with your above statement... and I would have to see

THE ENTIRE TEXT OF THE ORIGINAL POST, from which you like to pick &

pull in portions out of the original topic context for your current rant post.

Tell me the location of the original post and we can go through it when this thread goes away. I'll sort your weak theory bs out...

As applied to grounded grid rf amplifiers, sweep tubes can be used

in lieu of some (originally designed as) rf power tubes as a practical

and cost effective option. You just don't like that fact. Tough titty said the kitty...

It appears you just want to be anal retentive about labels... your

issues are not really a problem for me. If you/I/anyone finds errors

in any previous statement, they simply need to be posted with proper context and then reviewed and corrected. Such as you try with me, such as I do with you...

I will try to be more specific about my labels and reduce my global statements
because its clear that you don't seem to know much specific grounded grid rf

amplifiers without a map and your hand being held. So yes, and Frankie, you
did say that grounded grid amplifiers require neutralization.

> BTW, it's also clear that you do not understand what a 'beam tube'

> really is. A 'beam tube' is a tetrode where the screen wires are

> hidden behind the grid wires, and have special plates that direct the

> electron flow into a 'beam' to the plate. This type of construction

> lessens the current on the screen and eliminates the supressor grid.

Generic tube theory 101 one can easily quote from a number of books.
You forgot to include the very special part about electrode spacing,
how plate secondary emission is suppressed without actual power loss.
Because of the manner in which the electrodes are spaced.

But your book probably didn't have that part covered...

> But because of the beam-forming plates are tied to the cathode similar

> to a supressor grid, 'beam tubes' or 'beam tetrodes' are frequently

> called pentodes anyway.

Are you also going to illustrate space charge for us..?

In short, the beam power tube has the advantages of high power output,
high power sensitivity and high efficiency. Now get on with some point
or park it...

> Now there are plenty of power triodes, but they are NOT beam tubes.

> There are also plenty of power pentodes and tetrodes that are NOT beam

> tubes. And yes, there are sweep tubes are NOT beam tubes. The 'beam'

> tube is a sub-class of, not a synonym for, the power tube. Get it

> right next time, Skippy.

Aaaaaaaaahhhhhhhhhh... so this is where your going. When posts are
made about rf amplifiers and sweep tubes used within... most everyone
would assume the mentioned tube types fall are directly related to
the topic.

I don't recall writing power triodes are beam tubes... maybe you could
point
that exact text out..? I don't seem to recall writing that any power
pentode is a sweep tube... maybe you could also point that entire exact
text out..?

I don't have a problem calling the beam tube or beam power tube a
sub class of...

But somehow you're hell bent to prove some "all sweep tubes" or "all
pentode - tetrodes" statement wrong, out of some mysterious past post.
Let's have the post location and get at what's eating you so bad.

> >: The input and output capacitances for a 6LF6 are twice that for a 6146,

> topic!) I was talking about the high capacitance limiting the

> practical frequency range of the tube.

I stated the high C values are easily dealt with. Compare that to your
much
loved 6146 example which has serious vhf stability issues. Specific to
rf
amplifiers at 30Mhz, the maximum usable frequency is not an issue here.
You also
failed to mention what happens to the all-important grid-to-plate
capacitance
in a Grounded grid amplifier... can you write anything for the audience
bucky..?

> <snip>

> >The 6146 tube is mucho more costly to use and quite overkill for the

> tubes are good RF tubes because they were used in a few low-end radios

> and amps? Judas Priest...

Frankie, you throw us a lot of poop... come on now. Once again for
your sake,
we are talking sweep tube type & size (power level) amplifiers. Now
your going to try and
take my "same circuit requirements" and run with it..? Put on the
brakes there mr no hair...

The requirements for a simple, low cost, straight forward, grounded grid
modest
power rf amplifier for traditional HF Amateur use were easily met with
sweep tubes. Nothing more needs to be made out of the statement unless
your
running on fumes again... (which you are..) Grab a dead Dentron, Amp
Supply,
Palomar, Galaxy, Pal, Pride, D&A grounded grid rf amplifier and its
still
cheaper to replace the sweep tubes than it would be to use 6146 when
buying
new glass. A six pack at $20 each can easily get you +10dB frankie...
not half bad.

> Skippy, you REALLY need to sit down, shut your trap about what you

> THINK you know, crack open your mind (if that's at all possible), and

> LEARN the difference between what WORKS, what BARELY works, and what

> WORKS WELL! sheesh...

Frankie, you live too far out from the real world... From what you
say, all the ARRL and W6SAI Radio Handbooks which contain sweep tube
amplifiers are bad circuits. All the radio mfgrs using sweep tubes as
viable options where wrong to make "such a bad choice." All the past
amplifier mfgrs using sweep tubes were wrong. All those electronic
devices barely work... woe is us... You mr want to be an rf amplifier
guy need to relax and catch up with the real world...

> <snip bullshit>

I don't much care that you can't find it in any database... nor
do I care you can't find the model numbers anywhere. The equipment is
legal for current use in the frequency ranges listed above and that's
pretty much it. I nor others answer up to you surfing database pages.

> >Just for giggles, let me throw out a legal "Linear Amplifier" used in a licensed

>

> Now you can check it yourself whenever you think you have found a

> legal amplifier. When you do, let me know.

No sense beating your head against the wall... and the fcc web page
is no tell all. I have a different opinion of the issue which can only
be directly addressed by the FCC. The inquiry was made last week...
Nothing I write will ever make you happy... your too close to your
own sphinter.

> <snip bullshit>

> >"Hard Copy Matters"

>

> I don't have a hard copy, so it doesn't matter at all. If you actually

> seem to recall that your cure for poor linearity from sweep tube

> common-cathode amps was to stick a 10 ohm resistor between the cathode

> and ground -- YIKES!!! Ungrounding a power RF tube, now THAT'S "bad

> news"!

You started off your song and dance on the premise that linear rf amplification
using sweep tubes is not realistic or practical unless you use them as triodes.
And now your again pulling in text from previous threads in other locations.

Let the record be straight now frankie... but not as you tried to incorrectly
post some previous text with errors. A 10 ohm resistor in the cathode lead
will improve g-grid sweep tube amplifier linearity.

This is where your weak rf theory shows through... at this point
I will assume you are totally clue less as to why the 10 ohm cathode resistor is good information.

But since you know all about grounded grid rf amplifiers, you'll post why
you know the placement of a 10 ohm resistor in the cathode lead is bad news.
I'll then provide the actual facts to prove your talking sideways out of your a$$ ... (my turn at potty mouth)

While your there, please explain to us why you recomend parallel resistors
and or capacitors across the diodes in the KLV amplifier you so proudly provided with your "verbose analysis" here on the news group.

We can then go through the reason why your information is flawed and very bad news... based on old outdated information. Yikes...!

You have yet to clear up your cute little grid tied to the plate statement made in two previous posts that I've seen. Grids to the plates in rf amplifiers ought to cause a nice meltdown of most any tube.

> > Efficiency of a good

> >grounded grid sweep tube amplifier can be near 60% in clean AB2 linear

> >operation. Thats great results in the real world.

>

> Except that AB2 isn't very clean from a sweep tube.

It would easily exceed FCC requirements... also look pretty good
with the test equipment. What type of actual proof can you provide
us with to back your "isn't very clean" remark..?

> <snip (past frankie) bullshit>

> >Nope...

> >Its a starting point statement for anyone building a grounded grid rf amplifier

> >; to pay attention to the circuit, specifc to using sweep tubes, but not limited

> >to...

> >tetrode/pentode combinations as seen/used in some layout schemes. In specific,

>

> What "combinations" and "layout schemes" are those, Skippy? And can

> your "precious" sweep tubes perform better under those "combinations"

> and "layout schemes"? What circuits are "specifc to using sweep

> tubes"? Actually, your whole statement doesn't make any sense except

> to toss out a couple buzzwords and phrases. And you

> ---***>>> STILL <<<***---

>

> haven't described your "classic" sweep tube amplifier circuit!

Sure I have... I mentioned more than once that the Palomar 300 40-10
meter
amplifier has a practical tube pin bias, control, and drive layout that
looks pretty good for a sweep tube amplifier. (the 2 driving 4 model)

...and I mention on the http://sonic.ucdavis.edu Amateur Radio web
page, the Dentron
GLA-1000 amplifier text which contain circuit upgrades. The highlights
of
the text include glitch protection, cathode current reduction in standby
(rx) modes and improved linearity by simply adding 10 ohm resistors in
each of the cathode leads....

(Yikes...! ... that's just for you frankie because I know you like
to use it).

Onward...

One variant of a grounded grid rf amplifier ties the screen and control grid
to ground. Certain tube geometry's don't do well at all with both grids grounded and there are some circuit layout options to better allow high u triode operation without destructive grid currents. I would encourage builders to avoid that circuit... which can be found in some D&A model rf amplifiers.

I'm still waiting to see anything you've got on line about the subject frankie...

got anything..?

anything at all..?

not a one web page..?

Not a one article posted anywhere..?

Better yet, lets open it up a bit.... how about any posted electronics web page or article you've got on line frankie...? please..?

cheers
skipp

I just bought a A-99 antenna from Solarcon and was wondering if anyone has any experince with these units or could tell me any hints about them before i go to put it up and use it??

Thanks alot,

Jason

Jason, it is an OK antenna. That is to say that it works. I think they are cheap and don't care for them much. I bought one too ($40.00) for a quick set up antenna. I'm now running a Interceptor 10K. You can buy 5 A-99s for the price of one I10K...but you get 5 times the antenna too.

Go here and read this...

http://www.qsl.net/kg6aoh/a99/

Don't get discouraged, your antenna will work (for a while). I'm told you can improve the performance of this antenna by adding the ground radial kit and the "Fire-Up 99" from Firestick. See here...

http://www.firestik.com/Catalog/FS99-W.htm

Good Luck!

Dino

>
>(I x'd out a bit of your poor language)

Ok, so ignoring federal laws are ok but using profanity in a newsgroup
is bad? That's pretty screwy, Skippy.

>You pretty much answer with song and dance and a lot of off topic
>diversions ... I'm still waiting to see you respond
>
>to my questions about the at least two posts you made which instruct

>You wouldn't be repeating yourself if you answered the questions one
>
>time.

Let me guess: you didn't get the post where I answered your questions,
and you didn't get the reply where I reference the same. But you seem
to have gotten all my other posts, Skippy? What's up with that? Oh,

that's right, you missed a couple other posts, too -- posts where I
tell you facts that you couldn't dispute, just like the one in
question. Well, let's see if it gets through your browser on the third
try, since I just reposted the entire reply. Think you can find it
now? Or do you need to stall a bit longer?

How about quoting some of those terms with the definitions provided by
your references? Oh, that's right, you have a "hard copy" and that's
all that matters. Right, Skippy?

>> "...a beam power 'sweep' tube actually designed for RF Applications"

>excited over stupid things.

Well, if you have done the same thing (as you just admitted), then you
shouldn't be complaining about it, should you? BTW, what exactly is a
"beam power application"? Is there some application where beam tubes
are used exclusively over any other power tube? Or is it just another
one of your psuedo-technical buzz-phrases?

>the last 3 plus decades.

Call it what you want. I have no problem calling the 8950 a sweep
tube, since it was designed from a sweep tube, and is still intended
to be used as a sweep tube by the manufacturer. I might even call it
an RF power tube (albeit not a very good one) since that is -also- an
application specified by the manufacturer. But I DO have a problem
with "beam power applications".

>> "... they are all in a similar class - family style. Beam power

>Tell me the location of the original post and we can go through it
>when this thread goes away. I'll sort your weak theory bs out...

You can't even find my answers to your questions after I posted them once and referenced the post in seperate post, so how do you expect to find your own posts even if I reference them? Try this: cut and paste the quote in question into the search box on google. It works pretty well! But you might be disappointed at the results, because you have made many, many posts that demonstrate your ignorance of the difference between the terms 'beam' and 'power'.

>As applied to grounded grid rf amplifiers, sweep tubes can be used
>
>in lieu of some (originally designed as) rf power tubes as a practical
>
>and cost effective option. You just don't like that fact. Tough titty
>said the kitty...

Once again (and for about the thirteenth time), I never said they couldn't be used in RF power applications. What I SAID (and remember it this time, will ya Skippy?) is that they don't work AS WELL as tubes DESIGNED and INTENDED for that application.

I know you are going to forget what I just said, so I'll repeat myself a few times now so maybe it will sink in a little faster:

I never said they couldn't be used in RF power applications. What I SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED for that application.

I never said they couldn't be used in RF power applications. What I SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED for that application.

I never said they couldn't be used in RF power applications. What I SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED for that application.

Now is it clear what I said, Skippy? Or should I repeat it a few more times?

>It appears you just want to be anal retentive about labels... your
>
>issues are not really a problem for me. If you/I/anyone finds errors
>
>in any previous statement, they simply need to be posted with proper
>context and then reviewed and corrected. Such as you try with me,
>such as I do with you...

The errors you find come from your inability to read and understand the facts I have written.

>I will try to be more specific about my labels and reduce my global
>statements

>because its clear that you don't seem to know much specific grounded
>grid rf
>amplifiers without a map and your hand being held. So yes, and Frankie,
>you
>did say that grounded grid amplifiers require neutralization.

An excellent example of what I just wrote above. How about a quote,
Skippy? You aren't too stupid to use google, are you? Well then quote
ANY post where I say that grounded-grid operation requires
neutralization? You can't, Skippy, because I NEVER said such a thing!
On the contrary, I have said MANY TIMES that it DOESN'T.

>> BTW, it's also clear that you do not understand what a 'beam tube'

>
>
>Generic tube theory 101 one can easily quote from a number of books.

Books you apparently never read.

>You forgot to include the very special part about electrode spacing,
>how plate secondary emission is suppressed without actual power loss.
>Because of the manner in which the electrodes are spaced.
>
>But your book probably didn't have that part covered...

Or how about proper terminology for the grids? G1 = 'limiter grid', G2
= 'accellerator grid', and G3 = 'quadrature grid' or 'quadrature
plates'. Gee, I'm suprised you didn't hound me about THAT, Skippy!

>> But because of the beam-forming plates are tied to the cathode similar
>
>> to a supressor grid, 'beam tubes' or 'beam tetrodes' are frequently
>
>> called pentodes anyway.
>
>Are you also going to illustrate space charge for us..?

I don't think so. You can if you want, seeing as how it's new
information to you.

>
>
>Aaaaaaaaahhhhhhhhhh... so this is where your going. When posts are
>made about rf amplifiers and sweep tubes used within... most everyone
>would assume the mentioned tube types fall are directly related to
>the topic.

Not quite, Skippy. There are many people that understand -- better
than you do -- that 'power' doesn't necessarily mean 'beam'.

>I don't recall writing power triodes are beam tubes... maybe you could
>point
>that exact text out..?

Maybe you could point out the text where I make such an accusation.

> I don't seem to recall writing that any power
>pentode is a sweep tube... maybe you could also point that entire exact
>text out..?

You didn't even know the difference until I pointed out your error. So
what did you do when you read that, Skippy -- get flushed, run in a
panic to the library and look up the definition? LOL!

>I don't have a problem calling the beam tube or beam power tube a
>sub class of...

You certainly have a problem understanding what a beam tube is; at
least you DID until I educated you on the subject.

>But somehow you're hell bent to prove some "all sweep tubes" or "all
>pentode - tetrodes" statement wrong, out of some mysterious past post.
>Let's have the post location and get at what's eating you so bad.

Maybe when you sober up you can better describe what it is you want.
At the same time, how about finding the post where I say that
grounded-grid amplifiers require neutralization? Matter of fact, you
have misquoted me quite a bit, Skippy. How about going back through
your posts and correcting -yourself- before you try and correct -me-?

>> >: The input and output capacitances for a 6LF6 are twice that for a 6146,

You can't make the capacitance magically 'go away', Skippy. If you
could, they would be using 12AX7's for microwave applications.

> Compare that to your
>much
>loved 6146 example which has serious vhf stability issues.

So serious that is was the MOST COMMON RF power tube used in VHF
commercial radios before semiconductors took over? Right, Skippy. Keep
shoveling your bullshit around and maybe some of it will stick -- but
don't expect any of it to stick to me!

> Specific to
>rf
>amplifiers at 30Mhz, the maximum usable frequency is not an issue here.
>You also
>failed to mention what happens to the all-important grid-to-plate
>capacitance

>in a Grounded grid amplifier... can you write anything for the audience
>bucky..?

Sure thing, Skippy. Cgp is a characteristic of the tube, not of the
circuit. It doesn't go away just because you put the tube in a
grounded-grid configuration. For you to suggest that it does just
demonstrates, once again, your ignorance of the subject matter.

>> <snip>
>
>> >The 6146 tube is mucho more costly to use and quite overkill for the

>guy need to relax and catch up with the real world...

There you go putting words in my mouth again. Maybe I need to repeat
myself a few more times:

I never said they couldn't be used in RF power applications. What I
SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED
for that application.

I never said they couldn't be used in RF power applications. What I
SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED
for that application.

I never said they couldn't be used in RF power applications. What I
SAID is that they don't work AS WELL as tubes DESIGNED and INTENDED
for that application.

Is it sinking in yet? Or do you want to misquote me some more?

Maybe you can't understand simple logic: because your claims cannot be substantiated by probably -THE- authoritative reference for such information, that makes you a liar, Skippy! Your claims are bogus! You can't prove your claims, yet I can disprove them. Do you really think that something is legal just because YOU say it is? Did you rewrite the Constitution so that YOU can declare something to be legal? I don't think so, Skippy! LOL!!!

>
>But since you know all about grounded grid rf amplifiers, you'll post
>why
>you know the placement of a 10 ohm resistor in the cathode lead is bad
>news.

You made a number of errors here, Skippy. I suppose you claim that you
were talking about a grounded-grid amplifier when you wrote this:

"One can easily deal with some of the sweep tube non linearity by
placing 10 ohm MF resistors in each tubes cathode lead. The
degeneration will make the circuit mo'betta'."

For a grounded-grid amplifier, a resistor on the cathode is not bad
news, it's just plain stupid. Why? Because it doesn't do a thing
except raise the input impedance by 10 ohms and send a significant
part of your input power up through the ventilation holes! That's your
FIRST error.

Now if you want to put a resistor on the cathode of a common-cathode
amplifier, it does indeed provide degenerative feedback. So your idea
that a cathode resistor can create degenerative feedback is founded in
fact, but you forgot to read the rest of the page. Therefore, your
second error was mistaking common-cathode practices for grounded-grid
circuits.

Thirdly, the use of a cathode resistor is common practice to improve
linearity in an AUDIO amp, NOT an RF amp! In an RF amp it only causes
instability. That's why the 6146 has THREE pins for the cathode!

Your FOURTH error is not knowing that the inherent instability of the
sweep tube at RF frequencies (due to the fact that it was never
designed for use as an RF amplifier -- note the use of only one pin
for the cathode, the lack of shielding, long internal leads, etc)
makes the use of a cathode resistor (on a common-cathode RF amplifier)
truly "bad news".

Error #5 was screwing my words up to say that "the placement of a 10 ohm resistor in the cathode lead is bad news". Of course I did not say that (and I'm getting mighty tired of saying THAT!). What I DID say was that ungrounding an RF power tube is bad news. And it is, whether it's common-cathode or grounded-grid. But putting a resistor on the cathode of a grounded-grid isn't going to unground the tube, is it, Skippy?

And you REALLY screwed up after whining and complaining about MY alleged lack of RF theory and how tying the screen to the plate is an AUDIO practice, yet you now demonstrate YOUR lack of RF theory by making the EXACT SAME ERROR of which you accuse ME; namely, applying an audio technique to an RF circuit!

>I'll then provide the actual facts to prove your talking sideways out of
>your a$$ ... (my turn at potty mouth)

I'm still waiting. I have been waiting ever since my first post. What are YOU waiting for? You keep saying how you are going to provide the facts, but so far you haven't provided anything except a few vague descriptions and some buzzwords you made up yourself. So where are these facts, Skippy?

>While your there, please explain to us why you recomend parallel
>resistors
>and or capacitors across the diodes in the KLV amplifier you so proudly
>provided with your "verbose analysis" here on the news group.

Sure.

Rectifiers are usually used in series so that you can rectify higher voltages; e.g, two 1kV rectifiers in series have an effective PIV of 2kV. You can do the same thing with capacitors. The use of a voltage equalization network is a good and common practice to insure that the PIV of each rectifier (or the max voltage across each capacitor) in the series is not exceeded.

Now when you put semiconductors (or sometimes tubes) in parallel to increase the current capacity of the circuit, you need to make sure that the current is equally distributed between the components. You do this by using low-value resistors in series with each parallel circuit. Most audio amplifiers with multiple power transistors use resistors on the emitters for this very purpose. However, the common practice for power supply rectifiers is to simply use a diode capable of handling more current. The use of parallel rectifiers isn't a very good idea because the required current-equalization resistors tend to increase the input impedance of the rectifier circuit, and therefore the power supply (and that's a bad thing).

The same thing with the plate capacitors. They can be put in series to handle higher voltages (as stated before), but that reduces the total capacitance, and you need a voltage equalization network to protect the capacitors. Also, you can increase the total capacitance by putting two or more in parallel. It's a much better idea, however, to

simply use one capacitor that's rated for the application. (Kinda like tubes: You can kludge your way through with multiple sweep tubes, or you can get one tube that will do the job properly and with better results!)

>We can then go through the reason why your information is flawed and
>very bad news... based on old outdated information. Yikes...!

Voltage equalization networks are flawed and outdated? Boy, I'm waiting to hear THIS one...!

>You have yet to clear up your cute little grid tied to the plate

>It would easily exceed FCC requirements...

I have NEVER heard of a TUBE that could exceed FCC requirements! But sure it might pass, if you use a filter large enough to clean it up. In fact, you could probably pass an arc welder if you use a filter large enough to clean it up!

> also look pretty good
>with the test equipment. What type of actual proof can you provide
>us with to back your "isn't very clean" remark..?

Don't you even know how to read an EpIp graph? You are SERIOUSLY lacking in your RF theory, Skippy!

Find an EpIp graph of your favorite sweep tube. Note the spacing of the grid lines as they approach zero grid volts, and how that spacing suddenly increases when the grid goes postive. That's called "grid current distortion", and I haven't seen a sweep tube yet where it wasn't significant. Just for comparison, look at the graph of a 6146; note how the spacing between -10 and 0 volts on the grid is almost the same as the spaceing between 0 and +10 volts. Now THAT's the smooth grid-current transistion of a tube that's PROPERLY designed for AB2

operation, be it AF -or- RF. Want more examples? I can list a bunch of
them -- triodes, tetrodes, beam-tetrodes, pentodes...and none of them
are sweep tubes!

Ok, so the "2 driving 4 model" is the "classic" sweep tube amp? What
makes that "classic"? Why is that any better than any other sweep tube
amp, or what makes other sweep tube amps worse (less than "classic")?

>...and I mention on the http://sonic.ucdavis.edu Amateur Radio web

LOL! I'd like to see scope pics before and after the resistor mod!
I'll bet that if there is any increase in linearity it's because the
input power has been reduced. BTW, did you notice the voltage
equalization network on the power supply capacitors? LOL!!!

>(Yikes...! ... that's just for you frankie because I know you like

Unlike you, I would encourage an amp builder to follow the
recommendations of the manufacturer; if you are building a
grounded-grid RF amp, get a tube that's designed and rated for use as
a grouned-grid RF amp.

>I'm still waiting to see anything you've got on line about the subject
>frankie...
>
>got anything..?

Nope.

>anything at all..?

Negative, Rampart.

>not a one web page..?

Uh-uh.

>Not a one article posted anywhere..?

Sorry. I don't feel the need to publish information that's readily
available in almost any public library. Maybe you do, since RF voodoo
techniques aren't based on sound and generally accepted RF design

practices, and are therefore not very well published. I suppose that if those techniques were sound they would have been in widespread use for as long as the parts have existed, and that would mean there would be some books on the subject that are even more than 50 years old. Ever find one of those books, Skippy? Ever find one that has the definitions for your "classic sweep tube amplifier", or "reverse screen current", or "passive gain operation", or maybe "beam power application"? LOL!

>Better yet, lets open it up a bit.... how about any posted electronics
>web page or article you've got on line frankie...? please..?

Sure.

www.cet.com/~yeti/

I used to have more, but when I changed usernames I had to take it down because all the pages had my old username. They will be back up in time, tho. Criticize as you see fit. Who knows -- even YOU might find something that I should change.

Dino summed it up pretty well. Decent antenna.....cheap in price and construction. If you are in a very good location, it will do quite well. The A-99's gain figures have always been a flat out lie! 9 db from a non-direction radiator.....not possible!

I don't deny that truckers are using 10 meters, although I haven't heard what I could conclude to be truckers operating there. I have heard illegal CBer's in the past, though. Mind you, I don't listen all that often. When I do, though, I usually hear Spanish-speaking stations on the lower edge of 10. They could possibly be hams from Central or South America (some countries allow voice operation over the entire band) but are probably CBer's since they use AM.

> Congradulations, hams,
> THAT's the way to keep "intruders" out of ten meters (and other ham
> bands): USE IT instead of whining about it

No argument here. If we fill up the lower part of 10 with CW, RTTY, PSK or whatever, then maybe the AM CBer's will get tired of the QRM and move elsewhere. But there will always be a few that will insist on operating there.

Acquired both of these in decent shape except no output, assume it's the final in each. What do these use, as I recall the 1307, 2312, or 1969 were the standard issue in that era, but my junk box has long since been emptied. Appreciate info, and if anyone has the right parts I'd be interested. Is RF Parts still around? They were a bit pricey but generally had the stuff available. Also interested in Mods for the Kris, seems like this thing was designed with that in mind, the Hi-Lo switch, etc., being there and doing little but dimming the lights, which can also be done on the dimmer pot. Thanks for the help, thought it would be fun top get these dinosaurs running again. Email replies please.

Looking for a decent 12V amp, something like a Texas Star 250-350, or one of the Palomar models in that range, been a long time since I've been very active in the market, and that was before the A-1 debacle, so I don't think any of my old sources are valid. Would consider very clean sensibly priced used as long as no one has "improved" it, or new unit, or source for same.

A note to those of you who are prone to offering your opinions on what everyone else does, please don't waste your time here, I've been through all of this long before you got here, and I won't rise to the bait. Save it for someone you can truly bother.

hi jason, regardless of what the IK10 guy says the antron is a very viable and good working antenna in the real world. the IK10 is a super duper antenna and its built real well but its for the die hard hardcore cb'ers and not much for the casual guys. for a long time the a99 was the most popular antenna on cb and everybody had one and most all of them worked really well and still do. mine is on its tenth year now with no trouble and i've talked to every corner of the world with it. i also added the firestick end when mine fell off my roof and broke its tip and it works real well and lets the antenna be a little more broad banded. enjoy your a99 and get it as high up as you can in the clear.

That "channel" is in the 10-meter ham band. Stay below
28 Mhz if you don't have ham ticket.

If you bought a sideband radio, try 36 LSB.

If you only bought AM, you are SOL. Stay on 19.

The ground plane for that antenna is not worth the metal it's made from.

Hey Jason,

I have an A-99 (with the ground radials) up on my roof right now. Reception is good, transmission is good. As you've already been told the A-99 is a basic antenna, and has a few short comings. Be careful when you put the three sections together. I over tightened my first A-99 and the stud popped right out of the middle section. And this was with what I thought was very little torque. Do yourself a favor and just enjoy your new antenna. Get it up there as high as you can, use the best coax you can get your hands on. Most important step is to have fun while your on the air. When the time comes you'll know if a Beam or an I10K or some other fancy expensive antenna is what you want or need. For me, the A-99 does what I need it to do, so I'll stick with her for quite a while.

>meter
>amplifier has a practical tube pin bias, control, and drive layout that
>looks pretty good for a sweep tube amplifier. (the 2 driving 4 model)

Ok, I looked it up:

It has several of the drawbacks I have already mentioned, and a couple more. For starters, it has the same problems as the KLV: no voltage equalization network on the power supply rectifiers, and no regulation on the grid bias supplies. Now let's check out the signal path:

At the input, the exciter SWR is controlled with nothing more than a variable capacitor shunt. Pretty cheap way to drop the signal impedance for the first amplifier stage, especially since it isn't a tuned circuit (which it should be). But after the first stage is another one of the same problems that I mentioned before -- the need for tuned interstage coupling. And the very low input impedance of the second stage mandates a large tuning cap.

Notice that the grid is biased for AB2, meaning you are going to get grid-current distortion when overdriven. I like this line from that website:

"For AM use, the amplifier must be overcoupled; this is accomplished by taking the load control and turning clockwise 1/4 inch. If this is not done, the transmitted audio will sound "fuzzy" or distorted."

Makes one wonder what the spectrum looks like... yeesh!

Now let's look at the tube choice. The output power of the Palomar 300A is around 300 to 400 watts, and input power is 1 to 10 watts. There are six tubes, each with a 6.3 volt, 2.0 amp filament, for a total of 75.6 watts. The plate dissipation for each is 40 watts, or 240 watts in total.

Just for comparison, lets look at the 4CX250, which has a plate dissipation of 250 watts (hence it's numerical designation). The filament power is 15.6 watts (6 volts @ 2.6 amps in one of it's incarnations). That's only one FIFTH the power required by the sweep

tube amp, because you only need a SINGLE TUBE to get 300 watts output. And that's from 500 watts of plate input power, which isn't bad efficiency at all, especially considering it's running Class =AB1= in common-cathode configuration. And THAT means it has no grid-current distortion, no drive power requirement, and you don't have to "overcouple" the load for AM operation! Also, there is no interstage coupling, no tuned input, and only a small trimmer for neutralization that only needs to be set once (a fixed cap could easily be substituted). It also has fewer controls that need to be adjusted every time you retune the amp. And here's the kicker for ya, Skippy: The tube is designed to be linear for both AF -and- RF; which, when combined with AB1 operation, means that the harmonic content is significantly less than that of a sweep tube amp!

Now if THAT ain't enough, let's compare the cost: You have six sweep tubes costing $40 each; but just for the sake of argument let's say you converted to EL509's and use YOUR figure of $20/tube, for a total of $120. Or, you can get a brand new Eimac 4CX250 for $90 (Bruckner). Now are you going to complain about the cost of the socket and chimney? Because that cost is quickly offset in the sweep tube amp by the six sockets, plate clips, and associated hardware; the larger power supply; the large interstage coupling capacitor; the grid bias regulator that should be there but isn't; and a LOT more space (a much larger cabinet)!

So which is the better deal, Skippy? (You accuse ME of doing a song and dance, but I can't WAIT until you sing and dance around the facts on THIS one!)

I use it on the 10 meter band, and 20, and 40, where it works acceptably
well, through a tuner.
No complaints. Worked many european stations with it from Indiana.

The
> A-99's gain figures have always been a flat out lie! 9 db from a

Of course it is. Decibels are units of relative power.
It's polite to include in your ad, what you are comparing the antenna to
though.
Most antenna makers seem to be using dBi, which is comparing the antenna to
an isotropic radiator, an imaginary omnidirectional antenna with literally
no gain. It's as good a point as any.

dBd (dB-Dipole) would be a more useful comparison in that anyone can easily
build a dipole and check that the claims are (or aren't) true, but many
antennas would have to post negative numbers on that score.

I said "just about any". You and Twisted seem to suffer from selective
reading. Anyway if OE is not up to the job then try something else. As
far as the stuff getting down loaded anyway, for me that's not a
problem on a 1500Kbs cable modem at home or a T1 line at my work QTH.

The crap gets down loaded and dumped in to the delete folder so fast I don't even notice it. And for the tiny amount of stuff that gets through, well the "delete" key works real good too.

I am looking for a good base cb antenna where can I get in Houston Tx or online will do too. If not where could I get planes to build a good one that is easy for some who is new to cb radio. I also have a question can you run more than 5watt with cb radio or is 5watts the most. If so how can u run more watts.

the same way you do on the fm broadcast band. buy an amplifier. for a antenna
buy a antron99 or a imax 2000

go here:
www.bigradio.biz

Get a MaCo 3 el. Yagi for approx. $90 - $100. Use premium coax. I recommend
"bury-Flex" from:

www.davisrf.com

> If not where could I get planes to build a
> good one that is easy for some who is new to cb radio.

The ARRL Antenna Handbook or the assembly instructions for MaCo's antennas
are a free download from their site. BTW, MaCo is the producer of the old
Wilson line.

http://www.majestic-comm.com/assembly/index.htm

> I also have a

You may only run 4 watts AM or 12 watts SSB. SSB is much more efficient and
SSB radios generally have a better receiver section. Good luck.

He took skipper's s-meter course and now he can tell how many
watts they are running just by looking at his s-meter.

oh geez.....take me out with a 5 pill.....my boy .....what do
you think this is???? peanut gallery here.....i run steel my
man .....steel.....hell,.... ask 22 up in the great lakes what i
did to him last november.... the mudduck.....he tried to ignore
me,.... while i sat up in the parking garage at herman hospital and
dropped the maul on his superman ass for about ten minutes and i know
i dropped his drawers...oh they try to ignore the big cheese but they
can't .....hell i am a white man, doing the thing to a black
man,.....and you know what .....???? they just can't stand
it.....you should have heard it 82.....he always gets on the
bowl and talks about superman with a s on his chest and all of that
bullshit.....well guess what??? one night last year, i , your
radio host, was feeling froggy, after inbibing adult beverages, and i
, your radio host, was in position to cause damage, and low and
behold....i go to my spot, set up, turn on channel 6 and look who's
there, soooooo.....mr superman got his panty hose in a knott

as the big man in texas unloaded on his democrat ass, and you know what.....it felt good too......

so tell me amigo .....which of those tarts is yours over there......??? my favortite of course is that 45 year old vietnamese gal, with the beautiful tits, and body ....everytime i see her, she says we should get married..the only problem is her 5 kids and her lying ass......other than that i might consider it.......

oh so your blew up your 5 pill.....aw...what's the matter??? did some of the big strappers in galveston get ahold of you while you were jumping up and down and you thought you wanted to tango.......hell,.......you better quit half steppin good buddy........times are a changin.....old possum says 'who's goin to fill their shoes'....i have a answer to that.....i do have a fucking answer........the big cheeser can fill the bill.....no doubt qualified.....and never duplicated .....know why??? cause i can.....big cheese jus got down.....

And if it happened more often you wouldn't have anything to piss and
moan about, would you Georgie-girl?

Georgie-girl Busch WA3MOJ. Another fine product of the publik
edjukashun system.

All you really need to do is be on the band and use it. If the
frequencies are in use "intruders" won't have a chance, will they?

Riley Hollingsworth is charged with cleaning up the "ham" bands, not
CB. He is doing the best he can given his authority.

I have a magnet mount with a fm car antenna I am thinkin about getting
a new whip. Which is overall better a magnet mount with whip and coil
or a base antenna. If I get a whip I am thinking about getting a
workman sp1000 sp2000 or a sp3000 stargun 4 9-1 9-2. The two I want
mare are a workman sp2000 & stargun 4 and if I get a whip with coil as
a cb base antenna which ones would be the best. My antenna would get
15ft to 20ft high with 25ft to 30ft of rg58 coax would that work just
fine.

226. Microsoft Comes To 27 mHz?

I have an idea. How about some non-flame, non-troll,
let's-stay-on-the-topic, no CB vs Ham bashing, thoughtful opinions
about this strange new product from Microsoft?

http://www.eham.net/articles/3938

Coming to a computer near you: the Microsoft Wireless Optical
Mouse/Blue. It's a 2 channel device outputting onto either 27.045 or
27.145 MHz (CB class C service for R/C devices). My question is, why
did they put the wireless data link for this thing down in the HF
spectrum?

-A

I've been up and down a lot of interstates lately, and hardly hear any traffic on channel 19 anymore. Have the majority of them moved to a new "freeband" frequency? It seems every time I pass a truck, they're talking somewhere because I can hear them bleed over onto channel 19. But I just can't find where they're talking.

Mike

10 meters is a lot like the 11 meter ham band.
When it's open, 5W will do the job. When it's not, 1kW won't help.

Hey Skippy, I just looked up the datasheet for the 4CX250B: It's good for 650 watts in AM service (linear AB1), and all the way up to 175 MHz! WOW!!! Now ain't that a whole lot better than a boxfull of sweep tubes? Through Eimac's official distributer (Richardson) they only cost $180, which makes them cheaper than a half-dozen 6LF6's. But if you want one REALLY cheap you can pick up a National for $43 from Bruckner, which is WAY less expensive than six of your $20 sweep tubes. BTW, where CAN you get brand new sweep tubes for $20? I looked under several tube distributors and the prices seem closer to $30 per tube. Do you get them wholesale or something?

Mopar, the word wrap wasn't what I changed believe it or not. It was
some idiot deal with the encoding used for posting messages. So I
changed it to something else.

Yeah, right, and that's coming from a priate CBer who doesn't respect
radio rules. And you honestly expect people are going to believe you?
Not in this life time Tim. I'm not the only one on this news group, or
off, that thinks the same way. It was too easy for you to hang up
another dipole cut for the Ham band(s) of your choice, spin the knob
on that modified FT-840 you had, and play Ham Radio operator with a
stolen callsign.

I agree 100%

>Truck stops and shops are selling "bootleg" 10
> Meter radios, such as Galaxy and Connex,

Got to be the ugliest, unessacarly large radios on earth. While most
electronics are downsizing and increasing *useful* features CB radios are
doing the opposite. Does any one like the look of a "Big Chrome" radio on
this NG? I can't say I do.

>that are not even approved for sale in the USA--hop-

Jerry, that is VERY faulty logic. Fully automatic weapons in the hands of civilian citizens in California is illegal. Low and behold we need duplicate laws to cover the same crap. We need to throw in restrictions on clip size. While we're at it why don't we ban "Assault Rifles". Hmmmmmm....funny thing....some of those rifles on that list were in NO WAY assault rifles. Guess if it looks like an assault rifle it must be one. (Kindda like...if it sounds like a trucker it must be a trucker?)

I know this is not related to the topic of radio but it illustrates one place where the laws are continually broken and new laws to cover the same crap that the original laws covered has not and will not solve the problem.

Why do you claim I'm on the freeband Tim? What comes around goes
around. In your case being a self admitted CB pirate, and freebander,
operating on the Ham bands using a modified Ham rig you had is just a
logical extension of your other sins.

> operate there, yes?

You'll have to do better Richard. The logic you used above is
something I would expect from a 10 year old. And just to show how
silly the logic is I'll use my favorite counter example - abortion.

Since your not a female, I assume, so you can't get pregnant thus you
have no business telling a female what she can and can't do with her
body. But I'll but you do anyway, either every time you vote in an
election, send money to some cause, and what you confess to in church
etc.

Just because somebody does not currently use something does not
automatically imply they are ignorant of the subject. Many people
don't own or use hand guns but they can just as well have a very
informed opinion about them, and have every right to exercise that
right.

And getting back to my counter example why don't you tell the men out
in front of the abortion clinics, carrying the protest signs, they
aren't qualified to have an opinion because they can't get pregnant,
and see how long you last. You'll get an education you will not soon
forget I'll bet.

Amateur Radio Newsline™ Report 1316 – November 1, 2002

Amateur Radio Newsline report number 1316 with a release date of Friday, November 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A child is saved thanks to C-B radio in Australia and Ireland opts to restructure with slow-code. These stories are first on Amateur Radio Newsline report number 1316 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CB HELPS SAVE HAM RADIO OPERATORS DAUGHTER’S LIFE

The daughter of a ham radio operator is alive after he to turns to C-B radio for help. It happened down-under in Australia as we hear from Q-News Graham Kemp, V-K-4-B-B:

--
Recently on holiday at Finley, S. NSW, Eric VK2TRD's daughter Tegan, 12, had a very narrow escape, after she was bitten twice by a Tiger Snake! After emergency treatment at Finley Hospital she was transferred by Ambulance to Shepparton, Vic.

Travelling to Shepparton Eric called five times on the 2m repeater seeking guidance to the Hospital, no response. Disgusted, he called on the UHF CB repeater and got instant help.

Over 6 days there, nothing was heard on the repeater but the ident., and that was when Eric fired it up. On 2m simplex, only 2 farmers using it as an intercom, no c/s's.

Tegan, that night suffered cardiac respiratory arrest and was in intensive care for two days. Now at home she is doing OK. A traumatic time for all.

For the Amateur Radio Nrewsline, I’M graham Kemp, VK4BB of Q-News Australia.
--

Once the ordeal was over, VK2TRD paused to thank all who helped in his daughters rescue. This included the Shepparton CB’ers for their immediate response.

**

RESTRUCTURING: IARU REGION I MEETS NOV 10

The International Amateur Radio Union Region 1 Conference is slated for the tiny nation of San Marino beginning on November 10th. And according to the W5YI Report's Fred Maia, it could be a rather hot meeting. The reason -- two words: Morse code.

Writing in the November 1st issue of his newsletter, Maia says that the subject of Morse proficiency testing among those serving on the High Frequency Committee is shaping up to be controversial. On one side are two giants. Germany's Deutscher Amateur Radio Club and the Union of Russian Radio Amateurs are two national societies who are already on record as opposing dropping Morse testing as an international requirement.

Leading the charge to eliminate manual telegraphy tests is the Radio Society of Great Britain. It says that Region 1 if the International Amateur Radio Union should formally endorse the October 2001 resolution of the IARU Administrative Council in respect to abolishing mandatory Morse exams.

Both the Deutscher Amateur Radio Club and the RSGB have submitted well crafted conference documents stating their respective positions. How this will all work out will be known at the close of the conference on November 15th.

**

RESTRUCTURING: IRELAND ADOPTS 5 WPM

Meantime, restructuring and slow code have come to Ireland. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details:

--
According to Echo Ireland, that's the journal of the Irish Radio Transmitters Society, a set of new amateur radio regulations were signed into law by the Regulator in the Republic of Ireland on September 11th. The newws is just getting out and the main points of the new regulations governing ham radio are as follows.

First, the Morse code test speed has been reduced to 5 words per minute to bring it in line with whats become the defacto world wide standard. More important, that there is no longer any age restriction on a persoin getting an Irish ham radio license. This means that anyone -- any age in Ireland can brccome a ham. And up until now, there had been a probationary period of a year before a Full Licence could be issued. Now, thats gone too.

On the technical side, the maximum power permitted on each band is now listed in decibles per watt R-M-S at the output of the transmitter. This is good news because it effectively allows a power increase for Irish amateurs. The old regulations specified that limits were regarded as input power rather than measured at the R-F output jack.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.
--

We will have more news from around the world later on in this weeks Amateur Radio Newsline report.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amador County Amateur Radio Club Net serving Pine Grove California.

(5 sec pause here)

**

ENFORCEMENT: YOU CANT USE THOSE RADIOS ON FIRE CHANNELS

Back on this side of the Atlantic, the FCC has told a fire department to stop using illegally modified ham radio gear. The FCC's Daryl Duckworth, NN0W, explains:

--
Duckworth: "The Enforcement Bureau has notified the Bon Secour Fire and Rescue Department in Alabama that the Amateur equipment they were using was contrary to Commission rules because it had been modified to operate on Public Safety frequencies. The letter referred to several Icom IC-V8 handie talkies."
--

The note went to Karl Bingert who is the Chief Bon Secour Fire & Rescue Department. It told him that the use of Amateur Radio units of any kind, modified to operate on its frequencies, is against the Commission's rules and would result in enforcement action by the FCC. (FCC, RAIN)

**

ENFORCEMENT: FCC BACKS REPEATER OWNERS BAN OF UNWANTED USER

The FCC is once again backing up a repeater operator who wants to ban a particular user from the system. Its all taking place in Ohio. Again, the FCC's Daryl Duckworth tells us about the situation and the agency's position in favor of the people running the machine:

--
Duckworth: "The Enforcement Bureau sent a Warning Notice to Billy R. Marshall, N8ORF, warning him to stay off of the W8HFF repeater system in the Toledo Ohio area. The Toledo Mobile Radio Association had issued two letters to Marshall requesting him to stay off the repeater due to his failure to follow operational rules.

The Enforcement Bureau reminded Marshall that control operators may take whatever steps are necessary to insure complience with the rules and that they will be backed up by the Commission"
--

Marshall was given 20 days from the date of receipt of the FCC letter to reply and outline what steps he has taken to comply. (FCC, RAIN)

**

ENFORCEMENT: PHONE COMPANIES FINED

Two companies have learned the expensive way that it does not pay to try to grab another telephone company’s customers. This, as the FCC issues two Notices of Apparent Liability proposing a total of $6,560,000 in fines against two operator service providers for taking advantage of consumers.

The companies named are Opticom Corporation and ASC. The FCC says that the massive fines are based on Opticom apparent sixty-four violations, and another eighteen apparent by ASC. The term apparent is the FCC’s way of alleging a violation has taken place. The Commission says that it calculated the proposed fines by using the $80,000 per violation amount previously used in cases involving egregious slamming. Take your browser over to http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-226534A1.doc to learn more. (FCC)

**

RESCUE RADIO: EMCOM SUSPENDS NATIONAL EMERGENCY ALERT NOTIFICATION SYSTEM

EMCOM -- the emergency alerting system has suspended its the National Emergency Alert Notification System operations effective October 25th. Our producer, Bill Pasternak, WA6ITF, has the nitty-gritty:

--
In making the announcement, EMCOM officials said that what they term as a stand-down also affects the Emergency Information Web Sites maintained by EMCOM for every state, county and municipality in the nation. Also impacted are over 1 million other web pages that reportedly utilized the automatically updated EMCOM Homeland Security Status Bar or the PubAlert notification bulletin pop-up system.

By way of background, for the first six months after the 9/11 tragedy, EMCOM offered to provide access to full use of the system to any community's emergency agencies for $500 per month. During that period there were no takers, even though EMCOM had notified almost every senator, representative, and agency in the nations capital.

So the bottom line is this: The EMCOM alert system is dead for now but hopefully not gone forever.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.
--

In making the announcement, EMCOM took the opportunity to express its gratitude to the hams, ARES and RACES operators who helped to get the system off the ground.

More about EMCOM is on the web at www.comdinet.com/emcom (EMCOM release)

**

RESCUE RADIO: SKYWARN RECOGNITION DAY

On a more positive note, Larry Boyd, KB4GFT says in an Internet posting that The 2002 SKYWARN Recognition Day will occur on Saturday December 7th. It will begin at 00:00 UTC and run for 24 hours.

SKYWARN Recognition Day was created in 1999 by the National Weather Service and the American Radio Relay League. It honors the contributions that volunteer SKYWARN radio operators make to the National Weather Service.

Last year 80 National Weather Service offices participated. The list of this years participants and other information is on the web at hamradio.noaa.gov (KB4GFT)

**

RADIO RULES: RULES REWRITE ON MEDIA CONSOLIDATION

The Federal Communications Commission has embarked on a major rewrite of rules that limit the consolidation of media companies. The overhaul, which FCC officials first announced in June, is likely to conclude by the middle of next year when the agency issues final rules.

Many observers expect the agency to relax the current media ownership restrictions, although FCC officials stressed during a recent meeting that they had not reached any conclusions. The FCC is seeking comment on whether it should keep or change six specific media consolidation rules, including bans on common ownership of a newspaper and television station or television and radio stations in the same media market, as well as a limit on the percentage of the national audience that any station may reach.

Many of the rules were written decades ago before cable and satellite-based television and the Internet. The proceeding is being conducted under a statute that requires the FCC to periodically review its rules to determine whether they remain in the public interest. (FCC)

COMMUNICATIONS LAW: JUDGE THROWS OUT PAY AS YOU CLICK CASE

Its a big court win for all of us. This as a federal court says no to a law suit that could have cost all of us a lot of dollars as we clicked our way across the World Wide Web. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--

U.S. District Judge Colleen McMahon has rejected a claim by the B-T Group that it owns the patent on those single-click hyperlinks that make the Web what it is. It’s lawsuit accused Internet service provider Prodigy Communications Corp., of infringing on the B-T patent.

But Judge McMahon rejected the claim that each Web server on the Internet is a central computer and thus the Internet falls within the patent's scope. Her decision, filed in a White Plains, New York Federal Court concluded that no jury could find that Prodigy infringes on the B-T patent.

The B-T suit had been viewed as a test case that could have opened the door for the company to challenge other Internet service providers and demand licensing fees. These fees could have added a lot to the annual cost of anyone surfing the net.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.
--

With the potential of billions of dollars at stake, its not known if B-T Group will appeal the judges decision or re-file the case. (Published news reports)

HAM RADIO TRAINING: AMATEUR RADIO LICENSE GUIDE – THE PROGRAM

Stuart Cole, N5LBZed, tells us by e-mail about a computer program that he has just finished writing. Its called "Amateur Radio License Guide" and is a modern update of the DOS version that he brought out back in 1999.

According to Cole, the program is based on the official ham radio question pool, is divided into three sections and does cover training all classes of license. More information is in cybrspace at http://cableone.net/sacole/ (N5LBZ)

THE WORLD ABOVE 50 MHZ: WRITER ASKS YOUR HELP

Gene Zimmerman, W3ZZ, says over the VHF Reflector that his next World Above 50 MHz column in QST Magazine will include a discussion of VHF+ clubs and groups. This refers to weak signal groups that meet regularly, VHF groups that sponsor annual conferences like Central States VHF Society, contest groups and others interested in the non-repeater world of VHF and UHF communications.

Gene says that he has already mined a lot of data from Internet sites but I would like his information to be accurate and up to date. He has identified the PackRats; the Rochester VHF Group, the South East V-H-F Society and about a dozen others as falling into this category. He asks that anyone connected with these groups please contact him by e-mail to confirm the information he already has. He also wants a person or point of contact to send readers to if someone wishes to find out more information about how to particular group. Gene’s e-mail is w3zz@arrl.org. (VHF Reflector)

EMERGING TECHNOLOGY: AM MODULATION IMPROVEMENT ANNOUNCED

A new modulation technique for AM broadcasting is being promoted by broadcast industry pioneer Mike Dorrough, KO6NM. Dorrough claims the Advanced Modulation System can increase carrier modulation to 200% while improving the performance, range and sound quality of Amplitude Modulated radio.

According to the CGC Communicator, KO6NM recently discussed the system at an SBE meeting in Sacramento and plans other presentations.

Ross du Clair, WA6VWY is the Chief Engineer for Clear Channel in Sacramento. He attended the Sacramento meeting and is quoted in Radio World On-Line as saying, "This is real and it does work."

As previously reported, Mike Dorrough was the recipient of the National Association of Broadcasters Radio Engineering Achievement Award in 2000. This, for his contributions to audio processing and signal monitoring. Details of the new Advanced Modulation System will appear in an upcoming issue of Radio World magazine. (CGC Communicator)

**

EMERGING TECHNOLOGY: PERSONAL LOCATORS FOR KIDS

In the wake of multiple child abductions, parents are turning to satellite-based locator bracelets to track their children. The bracelets carry transponders that will permit parents keeps tabs on their kids over via the Internet or by telephone.

Wherify Wireless plans to release its three-ounce G-P-S equipped Personal Locators next month. The device uses satellite and cellular technology and has a built-in numeric pager. It allows the wearer to contact an emergency law enforcement service in worst-case scenarios

Each unit costs 400 dollars and is accompanied by about 30 dollars in service fees. Experts on missing children warn such devices are not foolproof and could give parents a false sense of security. Still many parents are willing to try the locators a try. (Scienceonline)

RADIO IN SPACE: SOYUZ FLIES AGAIN

Some good news for the astro-ham team on board the International Space Station. The Soyuz rockets are flying again.

On Wednesday October 30th a manned Soyuz rocket with three cosmonauts on board blasted off from Russia's Baikonur cosmodrome bound for I-S-S. The Soyuz-TMA booster rocket lifted as planned at 03:11 GMT with no reported malfunction on its way to orbit.

As reported last week, the launch of this Soyuz was delayed after the fatal crash of a similar design unmanned cargo rocket October 15th. During this Soyuz 12-day mission, the Russian and Belgian crew will replace a rescue capsule docked at the ISS. (Published reports)

CONVENTIONS/HAMFESTS/CONFERENCES: MARTLESHAM MICROWAVE IN NOVEMBER

Turning to the ham radio conference scene, work that the Martlesham Microwave Round Table 2002 will be held this year at Adastral Park, Martlesham Heath, England. The dates are Saturday the 9th and Sunday the 10th of November.

Highlights include a visit to the Royal Air Force's Defense Radar Museum at R-A-F in Neatishead and an evening dinner in Ipswich. All of this plus the usual flea market, lectures and the UK Microwave Group Annual General Meeting. For ore information e-mail g3xdy@btinternet.com (GB2RS)

**

CONVENTIONS/HAMFESTS/CONFERENCES: EUROPEAN RADIO SYMPOSIYUM IN BARCELONA

The 2002 European Radio Symposium is slated for November 13th in Barcelona, Spain. Convergence, digitization and electronic audience measurement will be key topics tackled in this symposium. Speakers include David Rogerson of Strategic Media Solutions. (Media Network)

**

CONVENTIONS/HAMFESTS/CONFERENCES: BIG TURNOUT FOR ARRL/TAPR DCC

According to a recent ARRL Letter over a hundred the worlds most active Amateur Radio digital enthusiasts turned up in Denver, Colorado, September 13th to the 15. This, for the 2002 joint ARRL and TAPR Digital Communications Conference.

This marked the 21st such Digital Communications Conference held. The agenda ranged from Automatic Position Reporting System topics to high-speed digital networking and software-defined radio. All agree it was well worth the trouble of traveling to the mile-high city to attend. (ARRL)

**

DX

In D-X, word that 3D2AG, will be working on Rapa Island through the 28th of November. He plans to operate as FO5RK on CW and SSB. This, during his late afternoon, nighttime and early morning hours. Rapa is part of the Austral Island group. (RSGB)

And SMZ0WKA is in Cuba until the 10th of November and is active as T48W. Look for him on 160 through to 6 meters, with an emphasis on the lower bands. QSL this one as directed on the air. (RSGB)

THAT FINAL ITEM: W6XYZ/KTLA AT 60

And finally this week, one of the nations pioneering television stations is in the midst of celebrating its 60th anniversary. That station is KTLA television in Los Angeles. And almost from its inception, ham radio has played a role in its success. Roy Neal, K6DUE, takes a look at KTLA and some of the hams who helped it to make history:

--
DATELINE "HOLLYWOOD." ON A HIGH AND WINDY HILL, OVERLOOKING THE FAMOUS DISTRICT OF LOS ANGELES, IN GIANT BLOCK LETTERS, THERES A SIGN THAT READS HOLLYWOOD. AT THE TOP OF THE HILL, THERE'S ALSO A RADIO TOWER WITH A HISTORY. THAT'S THE SITE OF THE FIRST TELEVISION STATION WEST OF THE

MISSISSIPPI.

IT WENT ON THE AIR IN SEPTEMBER OF 1942 AS W6XYZ, AN XPERIMENTAL TELEVISION STATION WITH STUDIOS ON THE PARAMOUNT FILM LOT. IN OCTOBER OF 1942. THE STATION EVEN BROADCAST INSIDE A MOTION PICTURE STUDIO, FEATURING THE MOVIE "THIS GUN FOR HIRE."

BY 1946, W6XYZ WAS GONE, REPLACED BY THE CALL KTLA. THE GUIDING GENIUS BEHIND THE STATION WAS KLAUS LANDSBERG, WHO CAME TO THE UNITED STATES AFTER ESCAPING FROM NAZI GERMANY. IN THE LANDSBERG BOOK, NOTHING WAS IMPOSSIBLE. SO KTLA RACKED UP AN IMPRESSIVE LIST OF FIRSTS WHILE PIONEERING TELEVISION.

ON THE FIRST OF JANUARY, 1946, THEY BROADCAST THE TOURNAMENT OF ROSES PARADE…LIVE. IN 1955, KTLA BECAME THE FIRST LOS ANGELES STATION TO BROADCAST THE PARADE IN COLOR.

IN MAY OF 1952, LANDSBERG DROPPED RELAY STATIONS ON MOUNTAIN TOPS TO BEAM AN ATOMIC BOMB TEST FROM NEVADA TO LOS ANGELES. HE CALLED IT OPERATION BIG SHOT.

AND IN MAY OF 1958, BUYING EQUIPMENT FROM NBC, KTLA WENT ON THE AIR WITH ITS TELECOPTER…A HELICOPTER EQUIPPED TO COVER LOS ANGELES FROM THE AIR!

ONE OF THE MOST POPULAR SHOWS LANDSBERG PRODUCED WAS LAWRENCE WELK, A PROGRAM THAT STILL EXISTS IN SYNDICATION.

MANY OF THE STATION'S ENGINEERING STAFF WERE RADIO AMATEURS. FOR EXAMPLE, THE INVENTOR OF THE HAM RADIO REPEATER, THE LATE ART GENTRY, W6MEP. THIS REPORTER REMEMBERS MANY FUN TIMES WHILE TALKING WITH THE AVUNCULAR MR. GENTRY FROM THE REPEATER SITE ONCE OCCUPIED BY W6XYZ.

IN 1964, FILM AND TV STAR GENE AUTRY BOUGHT THE STATION AND AMONG THE ENGINEERS HE BROUGHT IN WAS LOYD SIGMON, W6LQ. "SIG" IS PROBABLY BEST KNOWN AS THE FATHER OF THE SIGALERT TRAFFIC MONITORING AND PUBLIC ADVISORY SYSTEM.

W6LQ AND W6MEP WERE TWO OF THE BETTER KNOWN HAMS WHO HELPED KTLA AS THE STATION PIONEERED EARLY DAY TELEVISION UNDER THE GUIDING AEGIS OF KLAUS LANDSBERG.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE
--

KTLA is owned these days by Tribune Broadcasting and is part of the Warner Brothers -- or W-B Television Network. More important, its history is one rich in break-through technology and innovation. Its a pioneering station that made television happen. You can read more about it in cyberspace at the website you will find in this weeks amateur Radio Newsline report.

More on the fascinating history of W6ZYZ and KTLA is in cyberspace at http://ktla.trb.com/about/station/ktla-about-history1.htmlstory (Tnx K6DUE, CGC Communicator, others)

Notice above where I mentioned tube pin bias, control and drive
layout...
just making sure you keep that in mind... Oh yes, we are now talking
the palomar 300 as mentioned above...

Onward...

> It has several of the drawbacks I have already mentioned, and a couple
> more. For starters, it has the same problems as the KLV: no voltage
> equalization network on the power supply rectifiers, and no regulation
> on the grid bias supplies. Now let's check out the signal path:

Drawbacks..?
Please tell us why you feel the power supply rectifiers require any
equalization networks?

It's dated technology for vintage rectifiers... If your head wasn't up
your pazoo so far, you might notice many or most of current amateur
amplifier
mfgrs don't use them. Your theory is out of date by a decade or two.

Grid supplies in this type of biased g-grid rf amplifier do not have to
be regulated; although
some of the best results can be had with regulation, the bias voltage
can just be reasonably stiff.
Easily met with the high current voltage divider shown in the circuit.
It's hard to beat this
circuit, it has a relative measure of high source current capacity, low
supply impedance and very few parts.
Have a look at the Galaxy amplifier circuit on the sonic server, notice
how the bias

voltage is dynamic, controlled by the linearity detector... Similar linearity detector circuits
are found in Collins HF amplifiers.

Did you bother to run the actual numbers on bias supply? The supply circuit works pretty darn well
and is able to source more than enough current. The bias remains more than adequately stable
at full input operation. The circuit is very practical and active voltage regulation is not
required here.

> At the input, the exciter SWR is controlled with nothing more than a
> variable capacitor shunt. Pretty cheap way to drop the signal
> impedance for the first amplifier stage, especially since it isn't a
> tuned circuit (which it should be). But after the first stage is
> another one of the same problems that I mentioned before -- the need
> for tuned interstage coupling. And the very low input impedance of the
> second stage mandates a large tuning cap.

You are a piece of technical work frankie... that exciter input is no shunt, it's a pi input circuit... one of the most practical ways to drive some cathode driven amplifiers. Issues of impedance matching and distortion are easily cured using pi input circuits.

Tuned inter stage coupling is a problem frankie..? What planet are you from..?

Just a quick side bar if you'll allow it for the readers... This amplifier
works pretty well for what it is, but I like to use it to illustrate the tube
base pin connection and general circuit layout. If one were to build new, or
retrofit/rebuild a vintage sweep tube amplifiers, consider the circuit for
the above mentioned and avoid the multi stage design part... The quartet stage of this amplifier circuit is worth cloning (pretty close to as-built)
into some of the more poorly designed sweep tube amplifiers made in the past and sold on the Amateur Market. Just add tuned input to the quartet and some other current technology and life gets peachy...

OK, back after that commercial message...

Frankie...!
That large tuning cap your so worried about... got an idea of how large it
is..? Would you be upset if I told you it wasn't really that large... Now,
lets get away from the multistage part of the palomar and work with the 4 tube section of the circuit.

> Notice that the grid is biased for AB2, meaning you are going to get
> grid-current distortion when overdriven. I like this line from that
> website:

Please tell us how you know it's biased for AB2 frankie..? What change would
most practical to run the same tubes AB1..? Got a clue..? I promise it's
not a trick question.

You don't seem to explain why or how the distortion is generated, nor do you bother to explain that a proper tuned input circuit (such as the pi layout shown in the first stage) has a flywheel effect which pretty much takes care of any issues there.

> "For AM use, the amplifier must be overcoupled; this is accomplished
> by taking the load control and turning clockwise 1/4 inch. If this is
> not done, the transmitted audio will sound "fuzzy" or distorted."

Over coupling improves linearity in a lot of AB2 amplifiers without being
over driven... You think Palomar was the only one to suggest it..? In the
actual circuit, the over coupling is not required, just not a bad idea for am
operation. The best distortion prevention is to avoid over driving
any AB1 or AB2 amplifier.

> Makes one wonder what the spectrum looks like... yeesh!

A rebuilt Dentron GLA-1000b with the improvements I mention on the
sonic server, Not bad actually...

actually I thought it was more like "Yikes..!"

> Now let's look at the tube choice. The output power of the Palomar
> 300A is around 300 to 400 watts, and input power is 1 to 10 watts.

Best max input in high power mode is about 4 watts am carrier, output about 300 plus
watts. Low power operation, best driven with about 35 to 45 watts from a tube
final amateur transceiver. Other drive options are possible.

As described just above...
High power operation, better than +18 dB gain using the amplifier.
Low power operation, almost +9 dB gain .... " " " .

Now consider taking the quartet section of that amplifier and kicking it up
a notch in a well done circuit and you've got an easy +10 dB for not much
money and a circuit pretty easy to build. Your elevator has now arrived
at the Dentron and Amp Supply floor... watch your feet.

One could also do six or more tubes in parallel.... There is a Galaxy 12
sweep tube Amateur amplifier article on the sonic web server. I would
say
the most practical sweep tube amplifier building break point is a
circuit with
4 or 6 parallel tubes.

> There are six tubes, each with a 6.3 volt, 2.0 amp filament, for a
> total of 75.6 watts. The plate dissipation for each is 40 watts, or
> 240 watts in total.

In non speech compressed SSB service, that 240 watts plate dissipation
goes up
to 1kw input.

> Just for comparison, lets look at the 4CX250, which has a plate
> dissipation of 250 watts (hence it's numerical designation). The
> filament power is 15.6 watts (6 volts @ 2.6 amps in one of it's
> incarnations). That's only one FIFTH the power required by the sweep
> tube amp, because you only need a SINGLE TUBE to get 300 watts output.

The 4cx250b is a nice tube, I've also built many amplifiers using
them... but
you miss the boat again... They require costly sockets, specialized
airflow
management, considerably more parasitic prevention, a chimney and the
issues
of a much higher voltage anode supply (about to be really efficient. No
where near the practical simplicity of a sweep tube amplifier. Oh yes,
most of you would probably have to neutralize an AB1 circuit to keep it
tame. Otherwise you've got a nice power oscillator somewhere on the
band.

Going all the way back to where this all started, sweep tubes easily
meet
the requirements for a modest power level low cost amplifier that is
relatively
simple to construct.

> And that's from 500 watts of plate input power, which isn't bad
> efficiency at all, especially considering it's running Class =AB1= in

Yep, if you also want to design and build a regulated screen supply and
purchase the required hardware I mention above. The skill level to
properly build a
4cx250b amplifier is probably at least +6dB or more vs the requirements
of
building a quartet sweep tube layout.

> common-cathode configuration. And THAT means it has no grid-current
> distortion, no drive power requirement, and you don't have to
> "overcouple" the load for AM operation! Also, there is no interstage
> coupling, no tuned input, and only a small trimmer for neutralization
> that only needs to be set once (a fixed cap could easily be

Your heading in the direction that I said the two stage design is the best layout... well park it right there with a big No Way Bucky. Two stage
layouts are not for most people. But I do like the 4 and 6 parallel tube sweep amplifiers. Remember, I clearly mentioned that I like to reference the 300a for it's base pin connections and basic circuit layout.
A layout like the Dentron GLA-1000 update on the sonic server page doesn't have inter stage coupling and doesn't require neutralization; two stage hardware is just to much for most people to deal with.

A typical 100 watt amateur radio drives the grounded grid AB2 circuit quite well, unless you want to waste a batch of drive power into an AB1 circuit
swamping resistor... now that's not so great. Earlier amateur radios circa kenwood ts-430 era don't have true power control, just a mic gain. It's really, really, really easy to over drive an AB1 amplifier when you don't have true power control on your exciter. That overdrive appears as spectral potty...

> substituted). It also has fewer controls that need to be adjusted
> every time you retune the amp. And here's the kicker for ya, Skippy:

Same tune and load issues I would deal with when operating a 4/6 parallel sweep tube amplifier. The Dentron and Amp Supply grounded grid circuits on the sonic server have "set once and forget" tuned input.

> The tube is designed to be linear for both AF -and- RF; which, when
> combined with AB1 operation, means that the harmonic content is
> significantly less than that of a sweep tube amp!

Harmonic content is something you just love to say... but it's not an issue with most properly designed AB2 grounded grid amplifiers. That is why we see so many grounded grid amateur amplifiers made through the years... Pi and Pi-L tank circuits of proper Q deal with harmonics quite well; well enough to have passed the FCC requirements.

AB2 grounded grid amplifiers are mucho easier to build... Imagine a company like Eimac even designed tubes for AB2 grounded grid amps and called them zero bias triodes... hey, there's that perky 3-500z..! Tell the AB1 stuff to people who care about it.

> Now if THAT ain't enough, let's compare the cost: You have six sweep
> tubes costing $40 each; but just for the sake of argument let's say
> you converted to EL509's and use YOUR figure of $20/tube, for a total
> of $120. Or, you can get a brand new Eimac 4CX250 for $90 (Bruckner).

.... your magic 4cx250b
Add the required proper socket, chimney and blower (every application) and high voltage supply extras... the 4cx250b hardware ain't cheap... you seemed to have left those numbers out of your quote... Plus the 4cx250b socket has serious mounting considerations... so does all the associated hardware for that matter.

> Now are you going to complain about the cost of the socket and
> chimney? Because that cost is quickly offset in the sweep tube amp by
> the six sockets, plate clips, and associated hardware; the larger

EL-509/519 sockets cost me less than $2 each, .32 cent fuse clips make
great sweep tube plate clips and what extra special hardware do I need
to add...?

> power supply; the large interstage coupling capacitor; the grid bias
> regulator that should be there but isn't; and a LOT more space (a much
> larger cabinet)!

Larger power supply... do you know the size of that palomar amplifier
supply...? Do you know the size of Dentron GLA-1000 or Amp Supply
LA-1000 power supply...? Maybe you need to do a reality check.

Get off the inter stage cap crap... if one were trying to build
a multi stage amplifier, the caps are the size of a very very thick
quarter and can be bought off ebay for less than a dollar each. Same
European seller often has other amplifier parts at great prices.

The control grid bias supply in the palomar unit works well and can't
be much more simple. I've measured it in operation and it's just fine.

By the way, I have a very well designed, compact single tube 4cx250b AB1
amplifier and it's about 20% larger than the Dentron GLA-1000 and it's
cousin Amp supply unit. With +2.2kv on the anode of the 4cx250b safety
dictates a lot more spacing in and around the high voltage circuits.

> So which is the better deal, Skippy? (You accuse ME of doing a song
> and dance, but I can't WAIT until you sing and dance around the facts
> on THIS one!)

Facts are frankie... sweep tubes remain simple enough to build into nice
working, modest power, rf amplifiers and as of late, very cheap to
buy...
The deal is about $20 per tube. Grounded Grid AB2 circuits a lot more
practical for most builders.

Life goes on...

>
> Hey Skippy, I just looked up the datasheet for the 4CX250B: It's good
> for 650 watts in AM service (linear AB1), and all the way up to 175

You like your books, don't cha' frankie.... somehow you left out if
that's input power maybe your'a quoting there and who's data sheet
you looked up. You know Svetlana has a way of fudging up some data
sheets
a bit.

A single 4cx250b in linear service delivers about 325 watts carrier,
AB1 with about 5 watts of drive. It requires neutralization, regulated
screen
voltage and much higher anode supply potentials and all the required
extra
hardware which runs into some nice pocket change. I've built more than
my share of amplifires using the tube...

The 4cx250 tube also has much more serious potential vhf parasitic
problems.
Building rf amp with it is not for first time builders.

> MHz! WOW!!! Now ain't that a whole lot better than a boxfull of sweep
> tubes?

For what... low cost, simple to build rf amplifiers... probably not. At
least maybe not as much fun for ones first amplifier project.

> Through Eimac's official distributer (Richardson) they only
> cost $180, which makes them cheaper than a half-dozen 6LF6's. But if

I don't deal with Richardsons, they have a history of price fixing
and bad business practices. Convicted of something along those lines
some
years back. I don't buy 6LF6's new anymore... I can and do buy
current production Russian label EL-519 equivalents which are actually
better than the Svetlana brand.

> you want one REALLY cheap you can pick up a National for $43 from
> Bruckner, which is WAY less expensive than six of your $20 sweep
> tubes. BTW, where CAN you get brand new sweep tubes for $20? I looked
> under several tube distributors and the prices seem closer to $30 per
> tube. Do you get them wholesale or something?

Your National tubes are probably chinese made, which I really don' like all that much. Past quality control issues turn me off big time.

I get brand new sweep tubes direct from Eastern Europe... you buy retail or
from tube distributors. I buy direct and get the best prices. Wanna build a sweep tube Amateur Amplifier..? You can do it AB1 or AB2... I don't mind...

WA3MOJ asked:
>What else could they have been aliens?<

And was responded with:
"It's possible. You can hear Jupiter on 20 meters if you know what to
listen for. I suppose you don't know that, either?" by Richard Cranium.

I thought that was 12 or 15 meter? (shrug)
Don't forget the static Aurora Borealis generates. Not as far as
Jupiter, but just as alive.....

The only people who worry about CB'ers with amps
are self-righteous ham radio operators who think that
their pathetic hobby is the centre of the universe and
they have some kind of a duty to catch "radio criminals".
(and yet if you goto a hamfest or e-bay lookin for an
amp, 9 times out of 10 there's a ham op behind the
table selling it who will gladly look the other way for a
wad of cash and a thank you. Bada-Bing! (just tellin
the truth and they can't stand it)

many of them are now using FRS radios or in
some cases ham radios that have been modified
for out of band transmit. (easy to do - manufacturers
know if they put out a radio that can't be modified
the hams will never buy it.. cut a diode and BaDa-Bing!
your tx'ing on 154.---) Check out FRS and GMRS
freqs. That's where they all are now

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:11109-3DC31961-121@storefull-
>It is when Cb creetins with actions like amplifier use?,

Excellent point. What constitutes too much wattage? Is it not possible
to achieve
broadcast quality and cleanliness on the cb channels or on the freeband
with less wattage, or the same wattage as some hammies achieve?

>More than 4 watts is too much. <

Oh really?
Pleae explain your rationale of why 5 watts may bleed and interfere on
11 meter but not 10?

>I am sure it is possible to get it<

You mean you don't know? And you are an upperclassmen? Well, all I can
offer is a lesson supporting my personal rigs and what I claim.....I
already invited you once to come on down and I'll make your head spin
with what I use to get out.....you won't even believe it until you see
it yourelf in action. Scout's honor.

>but then that would put all of the current amp makers out of business
since none of them falls in the broadcast quality and cleanliness.

What is wrong with a Henry? I didn't realize you held hammie equipment
manufacturers in such contempt and thINK so little of them.

>Why do you always like to compare things to hammies,

I don't.....angry hammies do it to fail at illustrating some
non-point....what's good for their goose..... When you feel the
need to
put forward false truths such as above, a valid lie-slayer, such as the
analogy drawn between the two services (10 and 11 meter) is quite valid,
as the services are almost identical propagation-wise. You can't claim
something will bleed and interfere on 11 when it won't the same on 10.
You made the incorrect claim and comparing it to another service,
whether you agree or not, illustrates the ludicrousness of your claim
concerning hammie amps.

>be a real man and stand on your own merits of Cbing.
According to you, freebanding isn't cb. Make up your mind...you can't
have it both ways.
And the fact that you claimed you are above a nocodes ability and

licensed for more bands coupled with your statement concerning a "real man" by not mentioning hammie radio radiates hypocrisy as usual.

>For christ sakes <

No, NOT Christ's sake..YOUR sake is the only one making gaffes

>twist amatuer gear is supposed to meet specifications basment built amps don't.

Whaaaaaaaa? No one even casually mentioned basement amps until now.....that backslide is another subject and one you apparently feel applies to me....newsflash.....it doesn't. Try staying pertinent instead of trying to kill bugs with a sledge-hammer.

>with actions like freebanding,<

Circular again, not to mention another subject in it's entirety. Very much a debatable subject..such as you have your reasons and I have my reasons why the FCC allows 555 to go unscathed.

>Probably same as most lack of man power<

So you wish others would believe...the fact of the matter is...the feds know they are bothering no one on 555.

>with actions like bleedover, with actions like intereference. No these are not mere words and yes they violate rules.

Sure they do...IF and WHEN they occur.....running an amp does not necessitate causing interference or hammies couldn't run them on 10 meter.

>Again the comparision to hams, stand on your own twisty you'll be a better man for it.

What? and everytime you mention hammie radio it makes you LEss of a man? K..I'll remind you of your words you hold others to but do not abide by yourself. The hypocrisy thing is really dwarfing you..you want to ignore facts in this matter.....you can not. Many hammies freeband and many use hammie amps to do it...the fact that this upsets you, or the fact that you wish to ignore this and pretend it isn't so is your shortcoming, not mine, no mattter how you try to make your problems appear that they are anothers.....so there you have it, very pertinent and it stands on it's own quite well, thank you very much.

>Running an amp No it certainly doesn't necessitate interference but it usually is a big help, It doesnt really matter if it is 10 meters or 20 meters,

It doesn't? Are you certain about that? Can you cite an example? You mentioned basement amps and now you talk 20 meters.....what basement amp covers 20 meter?
Seems like you are having a difficult time practicing what you preach...apparently it is ok for you to cite hammie radio to make a

point, right after you told me it was "not standing on your own" to do so..........makes you quite the hypocrite.

>Btw I talk on 10 meters with a 100 watt radio like most hams I talk to they use just the radio

Which is more than I usually use to get worldwide.......

>and no amp, and most ham amps have
Lc networks in them to lower harmonics, they run class ab1 instead of class c splatter boxes like most all Cb amps who have no filtering.

There you go again....please follow your own advice...you can't do what you just asked another not to do and not show the world your hypocrisy. I don't run a cb amp.

>I see very few mobile HF amps in use by hams

No surprise there...you don't get out much.....I would wager there is puh-lenty you haven't seen.

>I also have noticed from experiance less hams run an external amplifier they just aren't really needed.

Hey...same with my dx activities.....I have always been a low-power dx fan, despite the outright lies and false innuendos and attributions you and Lelnad KC8LDO desperately fail with. You're arguing a non-subject with someone who is not a huge power fanatic.

>The correct thing to do is also contact the FCC and let them know as well.
About what? Usenet topics?

>Nah not usenet<

Well then what? YOU made the claim about a letter and directed it toward me........again...mail away! I think you're losing it.
That since we enjoy talking about amps or freebanding that we are all guilty of doing it? C'mon!

>That wasn't you we heard talking to 22 steel was it?

Dunno. Who is "we"?

>Talking about amps?<

Practicing for another go at speech censorship, are you?

>Would you like to see some websites where they are sold?

What....amps? I already know where they are sold and who sells them.....your last hazard guesses about the manufactureres were so far off the post was printed and taped to a wall in one of those manufacturers office as a running gag..

>Freebanding so those times you said you spoke to others from this Ng must mean you were lieing as usual right toe?

Like I said to Hall, (Who has since been exposed as a huge hypocrite, as he has/had a radio shop selling and performing al kinds of illegal services) choosing only to believe posts when they appear advantageous to a point you have to make doesn't cut it.

>Cmon twist If you want to break the Laws stand up like a man, don't just say it is all talk now and don't say well the hammies are doing this or doing that.

I didn't...that was Hall's bullshit until his words came back to haunt him.

>I really expected more from you twist I guess
thats why you have never posted your name in here,

Hahhahhha....you are indeeed a hypocrites hypocrite...you ask several times for me not to use hammies as examples, yet you have done it several times after asking me not to...hahahha! THIS, is a cb forum.....proper identification of surnames have no place in cb, never have. Asking one their identity is exclusive to hammies, not cb...we use handles...stop comparing hammie traits to cbers. How many times you want me to say I selectively disregard certain rules such as dx and freebanding?

>you do have something to hide,<

Sure I do..which is why I always talk on the same freqs on the same days at the same time...using the "twisted" handle.......yup...I'm a hiding.......Hahahhahhahahhahahahaahahah!

>all that tough talk <

Tough talk? Better check yourself........not from me, junior.

>about how you know what your doing is illegal well thats why don't you show us the real twistedhed, you know the guy who has that loose attitude on life who saysd what he thinks and does what he wants regardless of a few trivial FCC laws.

Claiming I know dx is illegal and that I do it anyway has you construing me as tough? What are you, a junior high female that just began puberty? Your sad and pathetic innuendo that I somehow "do what I want" is tribute to your frustration of low credibility. I do not "do what I want, regardless". This same tired and failed tactic is worn out and never worked, no matter who tried it........Lelnad KC8LDO,failed with it, Paul (in Okie-town) failed with it, Dogie N8WWM created one hell of a reputation for himself with it, Hall is now pegged one of the biggest liars on the board because of it, Frank is just about no longer and only has a few that will even give him the time of day, and Arron is completely nulled.
I don't do what I want with reckless abandon as you chumps so desperately wish to convey with your innuendo....I meticulously select

what I do and don't do concerning radio. I am glad we had this conversation.....trolls have been falling like stacked dominoes this last week and a half. :)

leland, why do you always claim i bootleg on the ham bands?

>Why are you so sure I'm playing feebander?<

YOU were busted cold, observed, and recorded. If you had any clue at
all, you would have figured this out when someone posted you had a beat
up van with your nocode sign as your license plate.

>Why don't you just fess up and admit that< >youdo, or did? <

It's not Tim's voice that is coming from the radio. YOU were caught
red-handed trying to jam me awhile back.....and couldn't even manage
that.....the cbers are too smart for you and the hammies can't stand
you...hahhahhahhahaha!

>Why do you claim I'm on the freeband Tim?<

You mean besides you being witnessed?

>What comes around goes around. In your< >case being a self admitted CB
pirate,< and >freebander, operating on the Ham bands<

What is great is you haven't learned how to see yourself as others do
(like Hall)....either that or you're too ignorant to even realize lies
and your presence have become one.

>using a modified Ham rig you had is just a< >logical extension of your
other sins.<
>--<

Now that's funny.

>Leland C. Scott<
>KC8LDO<

Buy a new van.....one that isn't dinged up so bad.

But not enough to know the difference between "there" as in put it
over "there", "their" as in it is "their" problem, and "they're"
as in sounds like "they're" (meaning they are) ignorant, and that
there is only one "t" in not.

can anybody tell me a good place were i can get a supply of audio and
transmitter chips for various cb radios.
as i have 6 cb radios one needs the audio imput chip replaceing and the
others neet the transmitter chip replaceing...
i used to fix hundreds of cb radios back 15 to 20 years ago.
and am starting to buy broken cb radios and other cb gear fix it all and
then sell it on ebay.....
if you can help me with a website or shop were i can get the parts i need
please get back to me by emailing me at shogun1965@lycos.co.uk
or if you need a cb radio power meter mike antenna switch filters ect.
email me as i have lots of bits and bobe or if you have any dead cb radios
email me as well many thanks : John

> and Riley, thanks to elections and a presidential change..

Let me add a bit to what I said above. The reason I know he has to know
about it is that a number of hams have told me that they have already sent
letters to him about the issue. I, too, have written
him about the matter, and if he reads his mail, he definitely knows.
Additionally, I intend to write the same letter to all the sponsors of the
Covenant Exemption Bill, a couple of whom are also hams
and should be concerned with the intrusion. Incidentally, that bill will
not likely come to a vote this
year, but will be re-introduced in the 2003 session. Some of us are doing
something besides just
griping on the newsgroups by writing letters and networking with what we
hope are the "right" people to get something done about it. In spite of
what a few say here, I am not a CB-hater; I just
want the 10 Meter intruders to be dealt with. I do get irritated at times,
and that manifests itself when I get to mocking the CB stereotype that is
common around here. I don't really mean anything by it, it just means I am
getting aggrated.

I also know that ARRL is working behind the scenes because I have had emails
with Jim Haynie,
President of ARRL. MANY hams are ticked off about the usurping of 10 Meter
frequencies; the
readers here just don't see that because those hams don't happen to post
here. If something doesn't
happen, it won't be due to lack of "interest" on the parts of the people
being interfered with. We are confident, however, that action WILL be taken

because unlicensed operators cannot be allowed to roam everywhere they wish. Eventually, they would land on some frequency that has vital uses and won't be tolerated. Better to deal with it now than to just wait and hope the problem
goes away. Even with the waning cycle, it will STILL be a local problem wherever the truckers are
talking. Some of those manufacturers are already offering single-band, CB look-alike radios. Test-
ing to see if there's a market? Maybe. There is, for example, a Ranger 15 Meter(?)--correct me if
I am wrong about the band or mfr-----and I think I saw such features as echo and R-beep. Don't
know about you, but I can see where that is heading, and we hope to head it off.

What the "militants" do within the 40--even on *some* of the "freeband"--doesn't really concern me. I just want to turn on my 10 Meter band and hear.....(quiet), or Dah di-Dah-dit, Dah, Dah, DiDah (CQ), NOT "Ah 10-4 driver".

Jerry

if that woman can get pregnant and carry a child all by herself then by all means she has whatever say she wants in the matter all by herself. you and leland make it sound like something that has absolutly nothing to do with a man. until the day comes when we have a second virgin mary or a woman can get another woman pregnant then the issue wont have anything to do with men but until then making a child is still a 50/50 type of thing. btw since when does leland need you speaking for him?

> sounds like a trucker it must be a trucker?)

Yet that is likely what will happen. Maybe a Bill in Congress to beef up
FCC WRT restoration
of funds for manpower and equipment to deal with this problem? I dunno--I'm
just guessing.

A law that BANS CB radios in trucks like they did radar detectors leaving
them to use FRS or
MURS? I don't know that either.

An amendment to the Local Enforcement law that lets state DOT officers
inspect, fine, and seize
illegal radios at weigh stations? Who knows. After all, some people said
local enforcement was
"un-consti-pa-tional", uh, er, "unconsti-too-shun-al" (sorry, couldn't
resist playing with words), but
it passed, no matter how ineffective it is in its current form. Never say
never.

A 7-10 year "sunsetting" of 27 MHZ CB? IOW, setting a date out in the future where 27 MHZ
could no longer be used for that purpose and aggressively enforcing that sunset date--again by re-
funding FCC to see to it????? I don't know that, either. Yet it could be argued that, whereas, CB
radio was originally intended for short-ranged personal and business comms (the cellphone of the
'50s), whereas its users have made it into a competing hobby to the Amateur Service, and that it,
perhaps, has outlived its usefullness, it could, therefore, be abolished in favor of more modern tech-
nologies such as cell, MURS, and FRS. After all, that would cure much noise, eliminate "skip", and
allow thousands more to be on-air at the same time in different locales without bothering each other. Remotely possible if complaints of intrusions onto other licensed spectrum continue to increase. Who knows?

As to "if it sounds like", it is, perhaps, a bit more easy to ID a trucker on 28.085 AM. First of all,
when the trucker says, "AH, tan fer thar, D R I V A H, Ah'm on Nevada State Route 16 with 18,000 lbs, tan-fo'!" (SQUEAK!) So, in that case, if it TALKS like a trucker, discusses loads like
a trucker, and squeaks like a trucker, then it must be
a.....

trucker.

People are quite correct to send letters to House committee members about
issues that affect them.
NO, I am not from Oregon. But we both share a common interest: Amateur
Radio. One letter would, perhaps, not get much notice. But lots of 'em
will.

"Piss ant"? Sounds like I am getting a bit close to where you live! Are
you "afeered" that we just
might get something done that would bring attention to something else you
wouldn't want stirred up?
Well, that could be an offshoot of our efforts, but it is not an intended
one--at least not on my part.
All I am interested in is defending Amateur Radio from illegal bandits.
Those channel 6 boys can
burn out each others' eyeballs for all I care..... Just
stay out of the ham bands without
the license, that's all.

How is microsoft infringing on CB? the R/C channels are not part of the CB Band just like the Freeband is not part of the CB band. So I will ask again where is the infraction ? I realize this is a troll post but at least be credible.

I just got into CB recently. I have to do a lot of travel these days, and prefer to drive whenever possible.

I have profoundly enjoyed it so far, despite having to learn some things the hard way. Yes, I did get my radio peaked and tuned. After reading on this group, I now know better. Thanks to those who try to rein in CB shop propaganda.

One thing I was wondering about is the amount of advertising I hear on the radio. Usually this takes the form of a CB shop or truck stop advertising this or that, but I hear, throughout the Southeast US, advertisements from several outfits who do some sort of Mexican massage parlor tour for $10.

These broadcasts do not change in power throughout Alabama, Georgia, and SC, and I'm told that they can be heard as far north as New York. My understanding of FCC regs is that advertisements are illegal on CB, as is communicating further than 155 miles, to say nothing of the ungodly power which must be behind these broadcasts.

>amplifier
>mfgrs don't use them. Your theory is out of date by a decade or two.

You are a little backwards here, Skippy. The old contact-type
rectifiers (like those old selenium jobs) didn't need voltage
equalization because they had enough leakage current to equalize the
voltage drop all by themselves. Silicon is a different story, as it
almost DEMANDS that the PIV not be exceeded. The practice may not be
used with cheap RF amplifiers, but it IS used in many modern circuits,
and is a necessity for any design using series rectifiers to be
considered reliable.

>Grid supplies in this type of biased g-grid rf amplifier do not have to
>be regulated;

That's a load of horseshit and you know it! In fact you say the exact
opposite below about how the grid supply needs to be "reasonably
stiff". That's what regulation is all about, Skippy!

> although
>some of the best results can be had with regulation, the bias voltage
>can just be reasonably stiff.
>Easily met with the high current voltage divider shown in the circuit.
>It's hard to beat this
>circuit, it has a relative measure of high source current capacity, low
>supply impedance and very few parts.

It's far from practical. It uses two 5 watt resistors, two 10 watt
resistors, a pair of rectifiers, and two large caps. That's a lot of

parts when a single LM337 would be much smaller and simpler,
moderately cheaper, and yet provides much better regulation.

Your voltage-divider also doesn't provide the low supply impedance you
claim. Let's say it lands on -5 volts (I think it might be closer to
-4.2 volts, but close enough). As soon as the grid current starts to
flow it's going to drop half a volt for every 10 mA of grid current
from those four tubes. That's an output impedance of 50 ohms, and
that's far from 'stiff'.

Then there are those .001 caps on the grid line. I see five of them,
which means a total impedance of 1 ohm at 27 MHz, leaving several mV
of ripple on the grid. That may not be much, but knowing that this is
a cheap amp, those caps are probably not silver-mica or even NPO's.
IOW, those caps are going to show considerably less capacitance at RF
frequencies than their stated value, and ripple is going to be
significantly greater than expected. The result is that your
grounded-grid amp isn't very well grounded.

>Have a look at the Galaxy amplifier circuit on the sonic server, notice

>distortion are easily cured using pi input circuits.

Oh dear, Skippy. You screwed up bad once AGAIN! That's not a pi filter, that's a low-pass L-pad. Notice the low value of the cap on the other side of the coil. That cap is there to compensate for the input capacitance of the tubes, not for the output leg of a pi filter! Wasn't it YOU that said how the interelectrode capacitances of the tube are "easily dealt with"? NOW I know why you didn't go into detail on the subject -- because you didn't even know what you were talking about! Not like I didn't have my suspicions, since you can't seem to go into detail about any of the other vague catch-phrases or buzzwords you use. Pretty soon I am going to make a list of all of the crap you either make up yourself or clearly didn't have any understanding of what you were talking about. I think I'll need to take a week off to make that list cause it's already mighty big!!!

>Tuned inter stage coupling is a problem frankie..? What planet are you
>from..?

Well, let's see: if you want to change bands you must first 'tune' your SWR cap, then tune your interstage L-pad, then tune your final output tank. Sounds like an extra step to me. Or are you using that 'new math'?

>Just a quick side bar if you'll allow it for the readers... This
>amplifier
>works pretty well for what it is, but I like to use it to illustrate the
>tube
>base pin connection and general circuit layout.

What about the "tube base pin configuration" and the "general circuit layout"? You mentioned it before but you haven't described what they are or explained why they are important. Regardless...

The thing to note about the "tube base pin configuration" is that all three grids use two pins. But the cathode (power-carrying input) is right next to a pin for the screen grid; so if you are going to use the tube grounded-grid you better shield pin 2 from pin 3. Even better, snip pin 3 from the base of the tube to eliminate coupling through the capacitance of the sockets.

Now the "general circuit layout" is just your basic grounded-grid amplifier -- and I do mean BASIC! I'll harp again about the lack of grid regulation (maybe the thought there was really just a half-assed attempt to make a cheap ALC circuit...?), a crappy input circuit (resistance-coupling would have been better than an L-pad -- no tuning required), the bypass caps are too small and too few (replace them with NPO's >= .005 uF and use one on EACH AND EVERY control-grid pin), and the interstage tuning should be a pi tank instead of another L-pad (matching the source to the load -- does that ring a bell?). It wouldn't hurt to add an ALC circuit. Collins used one that would be pretty easy to add to this amp.

In other words, your favorite "general circuit layout" leaves much to be desired.

> If one were to build

>past and sold on the Amateur Market. Just add tuned input to the quartet
>and some other current technology and life gets peachy...

Even better, spend a couple extra bucks and get an RF tube that will
do what you want without the high parts count. You don't need any
extra time, tools or skills; just a little more money for a cleaner
signal over a larger bandwidth, a smaller and lighter package, and
nearly hassle-free operation.

>OK, back after that commercial message...
>

>> website:
>
>Please tell us how you know it's biased for AB2 frankie..?

The fact that the grid is biased just a few volts below the cathode.
Did you forget your grounded-grid basics already? Or did you ever
learn them in the first place? Tell ya what, Skippy: you should be
paying me for the education you are getting in this converstation!

> What change
>would
>most practical to run the same tubes AB1..? Got a clue..? I promise

I did, but you are ignoring the post.

> nor do
>you bother to explain that a proper tuned input circuit (such as the pi
>layout shown in the first stage) has a flywheel effect which pretty much
>takes care of any issues there.

Because the input is not a pi circuit, and therefore cannot have a
flywheel effect. But you, like Brian, seem to be confused about this
"flywheel" effect: It's used on the OUTPUT of an amplifier to complete
an incomplete sine wave. Once again you are demonstrating your lack of
understanding of RF circuit concepts. Have you ever thought about
verifying your 'facts' before making yourself look like an ignorant
fool by posting such gross misunderstandings?

>> "For AM use, the amplifier must be overcoupled; this is accomplished

Overcoupling is nothing more than swamping the distortion with extra
capacitance. Not a preferred method, since it shunts output power and
screws with the match to your load.

>> Makes one wonder what the spectrum looks like... yeesh!

>sweep tube Amateur amplifier article on the sonic web server. I would
>say
>the most practical sweep tube amplifier building break point is a
>circuit with
>4 or 6 parallel tubes.

... your point? That they are cheap? Ok, I'll agree that they are
cheap. What's the problem?

>> There are six tubes, each with a 6.3 volt, 2.0 amp filament, for a
>> total of 75.6 watts. The plate dissipation for each is 40 watts, or
>> 240 watts in total.
>
>In non speech compressed SSB service, that 240 watts plate dissipation
>goes up
>to 1kw input.

That statement really doesn't mean anything. Now if you were to say
something like, "in non speech compressed SSB service, that 240 watts
plate dissipation can handle 1kw PEP input", now THAT'S meaningful.
It's just not very impressive since the average power input of
uncompressed SSB (in normal speech) is usually only 10 to 20% of PEP.
But I hope you weren't suggesting that the plate dissipation of the
tubes changed from 240 watts to 1000 watts, cause that you make you
look really stupid -- again!

>> Just for comparison, lets look at the 4CX250, which has a plate
>> dissipation of 250 watts (hence it's numerical designation). The
>> filament power is 15.6 watts (6 volts @ 2.6 amps in one of it's
>> incarnations). That's only one FIFTH the power required by the sweep
>> tube amp, because you only need a SINGLE TUBE to get 300 watts output.
>
>The 4cx250b is a nice tube, I've also built many amplifiers using
>them... but
>you miss the boat again... They require costly sockets,

Only one, and they don't cost as much as you might think...

> specialized
>airflow
>management,

A fan...

> considerably more parasitic prevention,

More than a sweep tube? I don't thinks so, Skippy. If you have six tubes then you need six parasitic supressors. Sounds like the single tetrode requires considerably LESS parasitic supression. Or are you using that 'new math' again...

> a chimney

What's the big deal there? It's just part of the hardware...

> and the
>issues
>of a much higher voltage anode supply

What issues? It's just a higher voltage, that's all. If you don't have the right transformer, just build a voltage multiplier with some diodes and a couple motor run caps. One of the simplest circuits to build. So simple, in fact, that it's used in the KLV =and= your "classic" Palomar!

> (about to be really efficient. No
>where near the practical simplicity of a sweep tube amplifier.

One tube and one stage vs. six tubes and two stages -- which is simpler, Skippy?

> Oh yes,
>most of you would probably have to neutralize an AB1 circuit to keep it
>tame. Otherwise you've got a nice power oscillator somewhere on the
>band.

Neutralization is a given in a common-cathode circuit, whether it's a sweep tube or an RF power tube, AB1 or AB2, or any other class. But the RF power tube requires considerably LESS neutralization than a sweep tube. In fact, and as I stated before, it can be nothing more than a single fixed capacitor. Big whoop!

>Going all the way back to where this all started, sweep tubes easily
>meet
>the requirements for a modest power level low cost amplifier that is
>relatively
>simple to construct.

Easy relative to what? A single pentode? Not even close, Skippy. Low-cost relative to what? A single pentode? Maybe by a small percentage. For the few extra dollars you get a much better amp.

>> And that's from 500 watts of plate input power, which isn't bad
>> efficiency at all, especially considering it's running Class =AB1= in
>
>Yep, if you also want to design and build a regulated screen supply

Unlike the grid in a grounded-grid amp, the screen of a common-cathode amp doesn't require any more regulation than a cap and a resistor.

> and
>purchase the required hardware I mention above. The skill level to
>properly build a
>4cx250b amplifier is probably at least +6dB or more vs the requirements
>of
>building a quartet sweep tube layout.

Gee Whiz, Skippy (and you noticed I didn't use any profanity, but it's certainly warranted here!) How in the world do you quantify skill level in decibels? That has to be one of THE most IGNORANT statements you have EVER made, bar NONE!

And it doesn't take ANY MORE skill to build an RF tube amp than it does to build a sweep tube amp. But it DOES require a bit more intelligence and understanding of RF theory and practices to make the correct choice of using the RF tube instead of sweep tubes!

>> common-cathode configuration. And THAT means it has no grid-current
>> distortion, no drive power requirement, and you don't have to
>> "overcouple" the load for AM operation! Also, there is no interstage
>> coupling, no tuned input, and only a small trimmer for neutralization
>> that only needs to be set once (a fixed cap could easily be
>
>Your heading in the direction that I said the two stage design is the
>best layout... well park it right there with a big No Way Bucky. Two
>stage
>layouts are not for most people.

Now you are contradicting yourself. Before you almost cried about how your "classic" sweep tube amp was THE amp to build, but now you are saying this "classic" design is "not for most people"? Can you say "backpeddle"?

> But I do like the 4 and 6 parallel
>tube sweep amplifiers. Remember, I clearly mentioned that I like to
>reference the 300a for it's base pin connections and basic circuit
>layout.

It's base pin connections suck, and you haven't exactly drawn lines around whatever part of the amp you consider to be the "basic circuit layout".

>A layout like the Dentron GLA-1000 update on the sonic server page
>doesn't have inter stage coupling and doesn't require neutralization;
>two stage hardware is just to much for most people to deal with.

Then why do you persist in recommending this "classic" design? This is just pure, unadulterated backpeddling, Skippy!

>A typical 100 watt amateur radio drives the grounded grid AB2 circuit
>quite well, unless you want to waste a batch of drive power into an AB1

>circuit
>swamping resistor... now that's not so great.

Now where did you come up with this AB1 swamping resistor idea? The swamping resistor is a method (albeit a poor one) of smoothing grid-current distortion, i.e, AB2! You must really enjoy showing off your pathetic understanding of RF electronics! One more for the list!

> Earlier amateur radios
>circa kenwood ts-430 era don't have true power control, just a mic
>gain. It's really, really, really easy to over drive an AB1 amplifier
>when you don't have true power control on your exciter. That overdrive
>appears as spectral potty...

Now where did THAT come from? Oh well, it doesn't matter, it's just another one to add to the list. For SSB, the mic gain IS the power control, dimwit! Properly setting the mic gain and the use of an ALC circuit has been the way to prevent grid current distortion ever since the problem was first realized!

>> substituted). It also has fewer controls that need to be adjusted
>> every time you retune the amp. And here's the kicker for ya, Skippy:
>
>Same tune and load issues I would deal with when operating a 4/6
>parallel sweep tube amplifier.

Gee, what happened to your "2-driving-4" "classic" design?

> The Dentron and Amp Supply grounded grid
>circuits on the sonic server have "set once and forget" tuned input.

You mean you don't have to retune them if you want to change the band? I don't think so, Skippy. Or they are not tuned circuits.

>> The tube is designed to be linear for both AF -and- RF; which, when
>> combined with AB1 operation, means that the harmonic content is
>> significantly less than that of a sweep tube amp!
>
>Harmonic content is something you just love to say... but it's not an
>issue with most properly designed AB2 grounded grid amplifiers. That
>is why we see so many grounded grid amateur amplifiers made through
>the years... Pi and Pi-L tank circuits of proper Q deal with harmonics
>quite well; well enough to have passed the FCC requirements.

You keep bringing up the same bs over and over again. Is it that you like to repeat yourself, or that you like to see me repeat myself? Regardless:

1. You haven't explained why grid-current distortion is "not an issue" with "most properly designed AB2 grounded grid amplifiers". In fact, you haven't even explained what makes it a "properly designed" amp. On the contrary, I have explained many times why AB2 IS a problem when the amplifier uses sweep tubes. You continue to ignore those posts.

2. There were so many sweep tube amps made through the years because they were cheap. That's all. Perhaps you missed this snippet from Svetlana's website that Tim recently referenced:

"The application of sweep tubes in amateur radio linear amplifiers was clearly an engineering compromise dictated by economy."

The "compromise" is due to the poor performance of the amps!

3. It takes more than a high-Q pi tank to pass FCC specs (for anything other than amateur equipment) because pi tanks pass harmonics -- harmonic supression requires a non-resonant low-pass filter!

Now, how do you determine the "proper Q" needed of a pi tank to "deal with harmonics"? Do you know what "Q" means? Better look it up. And what is a Pi-L tank? Do you know the reason it's called a 'pi' tank? Better look that one up, too.

>AB2 grounded grid amplifiers are mucho easier to build... Imagine
>a company like Eimac even designed tubes for AB2 grounded grid amps
>and called them zero bias triodes... hey, there's that perky 3-500z..!
>Tell the AB1 stuff to people who care about it.

AB2 amps are easier to build because you are not including an ALC circuit. But if you are building an AB2 amp you better use a tube that has a smooth grid-current transistion, which is NOT a sweep tube!

>> Now if THAT ain't enough, let's compare the cost: You have six sweep
>> tubes costing $40 each; but just for the sake of argument let's say
>> you converted to EL509's and use YOUR figure of $20/tube, for a total
>> of $120. Or, you can get a brand new Eimac 4CX250 for $90 (Bruckner).
>
>.... your magic 4cx250b

It's funny how you whine sarcastically when faced with the facts, just like a little kid being a sore loser...LOL!

>Add the required proper socket, chimney and blower (every application)
>and high voltage supply extras... the 4cx250b hardware ain't cheap...
>you seemed to have left those numbers out of your quote...

I left a lot of numbers out of the cost of the sweep tube amp, too. Do you want a full cost analysis of each? To show what? That the amp with the proper RF tube is a little more expensive? Heck, I'll concede that right now! The point, that you keep ignoring, is that for a little bit more money you can have a MUCH better amp.

> Plus the
>4cx250b socket has serious mounting considerations... so does all the
>associated hardware for that matter.

Not hardly! You claim to have made some amps with the 4CX250, but after that statement I'm thinking that you haven't even SEEN one, let alone built one! Of course the problem might just be you -- remember how the square block goes in the square hole, the round block goes in

the round hole, the triangular block... maybe your parents should have helped you out a bit more with your pre-school education. (Maybe they should have helped you out a bit with your RF education, too.)

>> Now are you going to complain about the cost of the socket and
>> chimney? Because that cost is quickly offset in the sweep tube amp by
>> the six sockets, plate clips, and associated hardware; the larger
>
>EL-509/519 sockets cost me less than $2 each, .32 cent fuse clips make
>great sweep tube plate clips and what extra special hardware do I need
>to add...?

Not much, but when the parts count is high the pennies do add up.

>> power supply; the large interstage coupling capacitor; the grid bias
>> regulator that should be there but isn't; and a LOT more space (a much
>> larger cabinet)!
>
>Larger power supply... do you know the size of that palomar amplifier
>supply...? Do you know the size of Dentron GLA-1000 or Amp Supply
>LA-1000 power supply...? Maybe you need to do a reality check.

Yes I do know the size of those power supplies. The VA of the plate transformers are going to be nearly the same for the sweep tube amp and the RF tube amp. The difference is in the filament supply transformer, as the sweep tubes require five times as much power, and the size is made even larger by the larger wire size needed for the higher current. Since the Palomar uses a single transformer which includes the filament winding you probably don't see the difference, but you could certainly weigh it. If you did you would find that about half your transformer is wasted on the filament winding!

>Get off the inter stage cap crap...

You mean forget about your "classic" sweep tube amp? Why? It took so long to get you to finally describe it, why not discuss it?

> if one were trying to build
>a multi stage amplifier, the caps are the size of a very very thick
>quarter and can be bought off ebay for less than a dollar each. Same
>European seller often has other amplifier parts at great prices.

Let's see, for an L-pad that's going to handle about 100 watts max, those caps have to be rated to at LEAST 200 volts (probably more). And because the inductor is switched, I'll be conservative and guestimate the value at 250 pF. Now you claim that these variable caps are "the size of a very very thick quarter"? Let me guess: are they compression trimmers? And what about the inductor part of the L-pad? How much size does that take? And the long rotory switch with all those wafers for bandswitching, is that also cheap and small? I thought you said this was an easy design, Skippy?

>The control grid bias supply in the palomar unit works well and can't
>be much more simple. I've measured it in operation and it's just fine.

Really? What is the regulation tolerance? How fast does it respond to
grid current peaks? How much ripple is left on the grids? If you
measured it then you should have those numbers.

>By the way, I have a very well designed, compact single tube 4cx250b AB1
>amplifier and it's about 20% larger than the Dentron GLA-1000 and it's
>cousin Amp supply unit. With +2.2kv on the anode of the 4cx250b safety
>dictates a lot more spacing in and around the high voltage circuits.

How much extra spacing? What's the spark gap distance through air at
2200 volts, point to point? Just to help you out, 5000 volts won't
spark over more than 1/4", so how much extra space do you need? And
if, as you say, it requires so much more space, why are radios and
amps that use RF tubes characteristically smaller and lighter than
those with sweep tubes? You are blowing smoke again, Skippy.

>> So which is the better deal, Skippy? (You accuse ME of doing a song
>> and dance, but I can't WAIT until you sing and dance around the facts
>> on THIS one!)
>
>Facts are frankie... sweep tubes remain simple enough to build into nice
>working, modest power, rf amplifiers and as of late, very cheap to
>buy...
>The deal is about $20 per tube. Grounded Grid AB2 circuits a lot more
>practical for most builders.

Facts are Skippy... sweep tubes are poor alternatives for RF power
tubes in both cost and performance.

Sorry to disappoint you, but the information is from Eimac. And you know what's really funny, Skippy? I didn't even look in a book for that info -- it came right from their website! So much for your sarcastic little comment about how I like my books! LOL!!!

>A single 4cx250b in linear service delivers about 325 watts carrier,
>AB1 with about 5 watts of drive. It requires neutralization, regulated
>screen
>voltage and much higher anode supply potentials and all the required
>extra
>hardware which runs into some nice pocket change. I've built more than
>my share of amplifires using the tube...

I doubt it. For starters, AB1 requires NO drive power regardless of what kind of tube you use. The input circuit may be built to load 5 watts while transforming the signal to a voltage level appropriate for the tube, but you can 'drive' it to full power with 5 MILLIwatts if you want. Once again you demonstrate your ignorance of basic RF theory. Maybe it's because you don't like books...

>The 4cx250 tube also has much more serious potential vhf parasitic
>problems.
>Building rf amp with it is not for first time builders.

Where did you get THAT pile of meadow-muffins? It doesn't have parasitic problems any more serious than any other tube, even sweep tubes! Do you even know what causes parasitic oscillations? They aren't caused by the type of tube, dimwit! They are caused by resonant conditions of the circuit surrounding the tube. To prevent parasitics, all you need is a parasitic choke on the plate and/or the grid.

Your scare tactics aren't working, Skippy. And scare tactics don't work on the voltage issue, either -- a capacitor bank full of 900 volts will kill you just as dead as one topped off at 2000 volts!

>> MHz! WOW!!! Now ain't that a whole lot better than a boxfull of sweep
>> tubes?
>
>For what... low cost, simple to build rf amplifiers... probably not. At
>least maybe not as much fun for ones first amplifier project.

If you want a low-cost simple-to-build amplifier you should try the venerable 6146 or 807 (basically the same tube). That's one tube that you have to try really hard to make it NOT work. My suggestion for first-timers would be to learn the basics with a 6V6 or 6L6, then work your way up from there.

>> Through Eimac's official distributer (Richardson) they only
>> cost $180, which makes them cheaper than a half-dozen 6LF6's. But if
>
>I don't deal with Richardsons, they have a history of price fixing
>and bad business practices. Convicted of something along those lines
>some
>years back.

Well, their prices are certainly akin to highway robbery, since you can get the 4CX250B from Bruckner for $110.

> I don't buy 6LF6's new anymore... I can and do buy
>current production Russian label EL-519 equivalents which are actually
>better than the Svetlana brand.

I don't buy sweep tubes so I really don't care. Matter of fact, I have a case of NOS 6LF6's that I will never use, and would be happy to give away if I knew they wouldn't be used for RF amps. Since that isn't possible, they are just going to stay on the shelf and collect dust.

>> you want one REALLY cheap you can pick up a National for $43 from
>> Bruckner, which is WAY less expensive than six of your $20 sweep
>> tubes. BTW, where CAN you get brand new sweep tubes for $20? I looked
>> under several tube distributors and the prices seem closer to $30 per
>> tube. Do you get them wholesale or something?
>
>Your National tubes are probably chinese made, which I really don' like
>all that much. Past quality control issues turn me off big time.

Ok, if you are going to pick through the candy dish, here's Bruckner's list. Take your pick:

4CX250B M EIMAC $ 110.00
4CX250B M AMPEREX $ 90.00
4CX250B M RCA,GE $ 85.00
4CX250B M WESTGHS,SYL $ 80.00
4CX250B M NATIONAL $ 43.00
4CX250B M RCA-CHINA $ 43.00
4CX250B M STAR $ 65.00

BTW, Star makes a pretty good tube. But the point is that, watt for watt, sweep tubes aren't that much cheaper than RF tubes anymore, even with the hardware (which will add $20 to $100 to an amp, depending on where you get the stuff).

>I get brand new sweep tubes direct from Eastern Europe... you buy
>retail or
>from tube distributors. I buy direct and get the best prices. Wanna
>build a sweep tube Amateur Amplifier..? You can do it AB1 or AB2...
>I don't mind...

No thanks. If I want to build an amp I'll do it the right way.

But somehow I knew that your bias in favor of sweep tubes was financially oriented. Because it certainly wasn't based on sound RF engineering principles. Ain't it funny tho: sweep tube amps used to be popular because they were so cheap, a decision based on saving money. And now there are people like you that encourage the use of these splatterboxes because spreading ignorance can put a few bucks in your pocket. You are a true sham artist, Skippy. Good thing that people like me are around to keep innocent folk from getting taken by people like you.

At a local radio shop, I can pick up a set of chrome covers for my Galaxy
for like 20 bucks. I wouldn't be able to see them with my radio mounted
where it's at, so I never bothered. I think they're kinda cool, myself.
What can I say? I'm a sucker for chrome.

Dave - the radios are cetainly large, and don't need to be. Still, I
appreciate the extra room my Galaxy affords a caffiene jittering fool lke
myself. Honestly, I think if they made the radios smaller by using alot
of surface mount components and such, few would buy them. It's become
apparent to me that many truckers prefer a "Classic" look. Nothing wrong
with that.

I used to work at a Radio Shack (I think it's a requirement at one time
or another for a computer geek). We had CB's that were physically
smaller, and had no analog S/RF meter. They had all the functionality of
your run of the mill Cobra 29LTD (or whatever), but they didn't sell
well. Then, my store started carrying physically larger radios with
chrome knobs and a chrome faceplate - like an old radio. Same features as
the smaller ones, and great sellers. Ya gotta give the public what they
want :) And if they want big and chrome, I say give it to them. I kinda
like 'em that way.

yes and there still a bad idea. any cb anywhere close to them kills them and they wont work. i'm sure it will happen with these mouses too. one of the guys on eham has already tried it while tx'ing on ten meters with low power and it still happened and thats over 1 meg away! think what four watts on channel 19 would do then. they wont cause any harm, i never implied they would but they sure will accept alot of it.

>Can we have your reason for why this is a bad idea? Do you know

There's alot of that. The number of unscrupulous techs willing to tweak
and peak a rig is mind boggling to me. Glad you're aware of it.

> My understanding of FCC regs is that advertisements are illegal on CB,
> as is communicating further than 155 miles, to say nothing of the
> ungodly power which must be behind these broadcasts.
>
You would be correct. Note though, that you're running a radio that has
been "peaked". That makes it possible (but not fact) that you're radio
has a few illegal quirks about it (depending on the knowlegde and
experience of the tech):

1.) You could be running in excess of 4 watts carrier.
2.) You could be overmodulated.
3.) You could be transmitting slightly off frequency.

If any of the above are true, you would be just as illegal as they are.
So, my suggestion would be to have the radio aligned (or at least
checked) by a reputable shop, and brought back to factory specs if
needed. Otherwise, you would appear to be hypocrytical.

Have fun with your new CB!

because i hear KC8LDO on 27.555 really often. is it not you? i've not
seen you deny it even once.

>That's funny<

Tragic, actually.

> I have never once heard it,<

Well that ends it then.

> why would Leland use 27.555<

To jam freebanders. He has exhibited the hatred towards them,
consistently trying to smear them with false accusations and lies.
He has indeed attempted to jam freqs where he is not permitted.

> remember he is not into Hf<

He lied, just like he lies about everything else.
You look kind of funny spinning your wheels attempting a defense of his
lies.

>you know as well as the next guy<

If the "next guy" you refer to is yourself and the rest of "Arrons"
named trouble-causing posse, he knows way better.

>you or someother schemp from this NG is >using his call sign

Think about it what you are saying....who has always maintained cbers
imitate hammies? Now do you really feel anyone here would imitate any of
you akc pups? It has ALWAYS been the other way around....you hammies
imitate us...hence the forging that had Lelnad and Dogie canned from
their respective ISP's at the time.

>if you really do hear someone out there.<

There really are people there, you just have to listen.

>Funny part is I heard a kp 82 causing all kinda >grief with op's on
27.555 Is that you?

Now THAT was Lelnad. See, you do hear him where he shouldn't be. Busted
again, Lelnad.

Cross-posted to: rec.radio.amateur.misc,rec.radio.cb

When I noticed this,
I was rather non-plussed.

We really need to improve things in amateur radio folks. This little girl could very well have died had the "other" service not been available there (and this can happen anywhere). It truely is a black eye for amateur radio when a ham has to depend on a class D service because no one was interested enough to at least monitor a 2 meter repeater in a remote location!!!

I happen to live in phoenix arizona (a major metropolitian location in the southwestern US) and I have had timed where priority traffic needed to be passed and no one would deign to even appear on the repeater to offer assistance! If this is the way ham radio is headed, I may decide to sell off my gear, contact the FCC and return my ticket and go strictly class D and cell phone use from here on out (I am reluctant to do this as you will see why below).

Its time to wake up and smell the coffee. if you haven't yet, better wonder why some of the public service events we USED to work are now being handled "in house". its because they can't find the voluteers anymore. However, this was not the case this last weekend with the MS 150 Bike event in arizona. There, at least, we had a hard working cadre of hams (and non-hams) that were willing to help out, especially when 4 accidents during the course of the day on saturday (2 of which required air evac service!). Without ham radio, there is the very possibility that things could have been much worse! This is why, even with all the other stuff going on, that I am reluctant to give up on ham radio (it is tempting, but too many places and people still need us).

so just remember, the next time you are out of cell phone range, and your old cb-radio isn't in the car anymore and you need emergency assistance. you better hope someone is paying attention.

DE N7ZZT
Phoenix, Arizona

>Let me add a bit to what I said above. The reason I know he has to know about it is that a number of hams have told me that they have already sent letters to him about the issue. I, too, have written him about the matter, and if he reads his mail, he definitely knows. Additionally, I intend to write the same letter to all the sponsors of the Covenant Exemption Bill, a couple of whom are also hams and should be concerned with the intrusion. Incidentally, that bill will not likely come to a vote this
year, but will be re-introduced in the 2003 session. Some of us are doing something besides just
griping on the newsgroups by writing letters and networking with what we hope are the "right" people to get something done about it.<
<

Got that right.

>In spite of what a few say here, I am not a CB-hater; I just want the 10 Meter intruders to be dealt with. I do get irritated at times, and that manifests itself when I get to mocking the CB stereotype that is common around here. I don't really mean anything by it, it just means I am getting aggrated. <

Hey, if that's your extent, rant on.
It's quite intellectual when compared to some of the stuff in here.

>I also know that ARRL is working behind the scenes because I have had emails with Jim Haynie,
President of ARRL. MANY hams are ticked off about the usurping of 10 Meter frequencies; the readers here just don't see that because those hams don't happen to post here. <

You must have been up late last night, Jim.
Look at the last few looong threads......nocodes,,but they are hammies.

>If something doesn't
happen, it won't be due to lack of "interest" on the parts of the people being interfered with. <

It will be because the problem will simply go "poof" just like it appeared, it will be gone.

>We are confident, however, that action WILL be taken because unlicensed operators cannot be allowed to roam everywhere they wish. <

Agreed.

>Eventually, they would land on some frequency that has vital uses and won't be tolerated.<

Ummmmm.....not a very good chance of that happening with your typical export radio.

>Better to deal with it now than to just wait and hope the problem goes away. Even with the waning cycle, it will STILL be a local problem wherever the truckers are
talking.<

I think the truckers will move back down once it's quiet again. Same thing every cycle.

>Some of those manufacturers are already offering single-band, CB look-alike radios. Test- ing to see if there's a market? Maybe. There is, for example, a Ranger 15 Meter(?)--correct me if
I am wrong about the band or mfr-----and I think I saw such features as echo
and R-beep. <

I think I may have read a thing or two about 10/11/12 meter radios.

>Don't
know about you, but I can see where that is heading, and we hope to head it off. <

Since it really doesn't concern me one way or the other, I wish you good luck.

>What the "militants" do within the 40--even on *some* of the "freeband"--doesn't really concern me. I just want to turn on my 10 Meter band and hear.............(quiet), or Dah di-Dah-dit, Dah, Dah, DiDah (CQ), NOT "Ah 10-4 driver".
Jerry<

Uh-huh.....I hear cw on 555 at times.....it doesn't bother me...even when it's vulgar.....when it's benign, I sometimes even answer....hell, tune in and listen on a Saturday afternoon or night...I guarantee you'll hear it.....Sunday morns, too!

I always heard that getting a CB peaked and tuned was a good thing as long as you didn't over do it. Say if you can turn it up to 25 watts for the absolute max. If you set it to around 12-15, it will be good and not hurt any of the components in the CB assuming you have a good antenna and low SWR.

A similar thing happened to me with CB and Ham radio, although not an emergency. My van broke down in the middle of Dartmoor in Devon, UK which is the middle of nowhere. My cellphone didnt work in that area. So I called on the local 2 meter repeater for about an hour, and not one voice was heard. I then remembered that I still had a CB handheld in the back of the van. I then got calling on channel 19, and within 5 minutes someone came back to me. He was able phone the breakdown company so that they could come and tow me.
This was during the middle of the day, when people would be listening to the repeater. So much for Ham radio!

: yeti@cet.com <yeti@removecet.com> wrote:
:>Frank..! chill pill and wake up. I didn't write what your getting so
:>excited about,
: I was replying to my own post because you haven't.

Can't be on the news groups every day, much as I might like to be. No hurry getting back, you rarely say anything positive to anyone about anything in your posts. You have that negative stuffy vibe going on...

:> but I' here now. So relax and check your reverse screen current.

: "Reverse screen current"? Now THERE's a new one! Is that how they get
: "bird watts", by using "reverse screen current"? LOL!

You say your a broadcaster and a self claimed tube amplifier type, but you've not heard of reverse screen current..? Well, frankie... you just failed AB1 rf amplifier 101 school. Go look it up... tetrode amplifiers can have reverse screen current. Depends on the tube type and circuit layout.

:>> "properly designed" grounded-grid amplifier works? Maybe you can even
:>> explain how a triode-configured pentode DOESN'T work like a triode,
:>>
:>
:>Sure, consider the properly designed, AB2 grounded grid "Cathode Driven
:>amplifier. The interposed screen grid acts as an electrostatic shield
:>between the grid and plate, with the consequence that the grid to plate
:>capacitance is reduced.... combined with Grid Shielding between the
:>cathode and the plate which make your much touted neutralization
:>unnecessary.

: The reason that no neutralization is needed for a grounded-grid
: amplifier is because the output is in phase with the input, which
: means that you don't get regenerative feedback. It has nothing to do
: with grid shielding. Your lack of theory is showing, Skippy.

: In a common-cathode amplifier, however, the screen and supressor do
: shield the grid from the plate, and Cgp for a pentode is much lower
: than for a triode. But in the class of pentodes, the Cgp of a sweep
: tube is characteristically high (as I pointed out earlier), which is
: why it requires much more neutralization than an RF pentode.

But in your previous posts, you wrote g-grid netralization was required...? Now you again change your song..? Whats up with that frankie..?

It is actually easy for a grounded grid (out of phase) amplifier to have big time stability problems, see the previously mentioned http://www.vcnet.com/measures pages for well done text on the subject. Out of phase circuits are not the cure all for neutralization. Shielding and lower Cgp are very nice advantages to using some tetrode/pentode valves in grounded grid layouts. Phase shift hopefully near 180 degree ballpark is just part of the nature of the layout and is also a major benefit of g-grid circuits.

It is quite possible to have stable in (relative) phase grid driven rf amplifiers that do not require neutralization.

But the applied circuit reduced Cgp values of the grounded grid layout are a big time stability advantage. Don't play it down frankie, it's a fact. Low C values are also helpful in AB1 circuits, example sweep tube grounded grid layout has the benefit of 1/2 C for your common cathode AB1 circuit, which contributes much to stability and elimination of your beloved neutralization requirements. G-Grid layouts can really help tame the gremlins.

:>Triode connected tetrodes (grounded grid) show a degree of improvement
:>in distortion figures as opposed to grid driven service.

: Yes they do, primarily because of the very low impedance required for
: the input, and the fact that the input power is carried through as a
: portion of the output power. Not because of grid shielding (LOL!). But

Your trying to cut and paste things out of context again frankie. The above statement does stand on its own as fact. At no point did you see me write "primarily", "mostly" or anything close.

Actually, had you bothered to post the proper statement path facts... grid shielding means less current in the applied example. Less screen current is very very nice...
Exciter feed through power of the example AB2 grounded grid amplifier is a big time "freebie" you don't see in AB1 circuits. Makes a typical 100 watt amateur hf radio a pretty nice match for a 4/6 sweep tube layout.

: then again, the grid-current distortion is much greater from a sweep
: tube than from an RF power tube because sweep tubes aren't designed
: for smooth transition into grid-current conduction -- and configuring
: a sweep tube as a grounded-grid triode doesn't change that fact.

They don't have to have ultra smooth transistion. The distortion is easily dealt with using a proper Q tuned input as found on many well done Grounded Grid Layouts. The reasons for/why are quickly explained in most Radio Handbooks... see "flywheel effect" related to rf amplifier tuned input circuits.

:>What might be called more passive gain operation of the screen and
:>supressor grids in an AB2 amplifier, does not deny their actual operating
:>shielding function and reduced Cgp in the grounded grid circuit.

: "Passive gain operation"? Where do you come up with this shit, Skippy?

Potty mouth again...
Means the G2 & G3 electrodes have no traditional or active potentials
applied, but are part of the circuit without gain contributions. We
receive the benefits of reduced 1/2 Cgp and the shielding function which
greatly contribute to the amplifier stability.

:>> even though it's clearly designed as a triode. Or maybe you can
:>> explain why Swan added grid-current distortion precautions to the
:>> manuals (and ALC circuits to the radios) for their sweep-tube radios
:>
:>Pretty sly... but not sly enough. You jump around a lot and omit very
:>significant details...
:>First off, the topic was classic grounded grid rf amplifiers, in specific
:>AB2 operation.

: WRONG! The topic was the comparison of sweep tubes to properly
: designed RF power tubes in RF power amplifiers. You accuse ME of being
: sly when it is YOU that is trying to change the subject?

Doesn't matter really... Swan Engineers used what they had and not all of
it was worth the trouble. ALC in that vintage radio was useless. If you
want to ask about grid current distortion issues, be sure to tell everyone
your moving over to a grid driven circuit.

:> Now you want to jump over to a Swan Radio... tis not
:>the same Grounded grid animal Frankie... Oh, but you failed to mention
:>that.

: No, I didn't fail to mention that. But I'll say it again just in case
: you didn't understand it the first time: Swan radios used sweep tubes
: in common-cathode configuration, not grounded-grid as they did in
: their amplifiers. I exampled both their radios and amplifiers for
: comparison purposes. You mean to tell me that you were so confused as
: to the conversation that you couldn't figure that out?

Your text above was left out of that actual thread post and you were
jumping back and forth from grounded grid to grounded cathode circuits
without properly describing which of the two types circuit you were
talking about.

:>Homey ain't playing your smoke screen game.

: The smoke screen is coming from your camp, Skippy: You keep trying to
: narrow the topic down to grounded-grid amplifiers only. Doesn't really
: matter tho, since your theory on grounded-grid amplifiers sucks just
: the same.

We can go anyway you want to go frankie... but this whole thing started
out as a classic sweep tube amplifier thread, remember..? I want you to
quickly name the actual circuit your trying to go over so the readers
and I clearly understand what planet your currently in orbit about. You
were taking me to task about sweep tube label specifics, now it's my turn
to tell you to be specific about the circuit you're currently trying to
describe in your posts...

:>In short, all mfgrs used what they thought the most practical part and
:>circuit
:>trade offs... which probably included many short cuts... You claim to be
:>a big time broadcaster type... ever seen a station take shortcuts..?

: The tradeoff was based on cost, and that's all. The buyer sacrificed
: linearity and spectral purity in order to get a cheap amp.

The linearity and spectral purity were more than good enough. Good enough
to be passed by the FCC for sale as legal amplifiers. Through the
60's, 70's and 80's, Low cost legal Sweep Tube Amateur RF Amplifiers which
preformed well, their linearity and spectral purity specs quite usable.
Thousands were sold through the years...

:>The Swan Radios are not grounded grid circuits... as we have been taking
:>here. But you want to interchange sidebar off topic circuits.... Nope,
:>"wouldn't be prudent at this conjecture.."

: That has been the discussion all along, why change now?

Swan Radios are not traditional grounded grid circuits. If your going to
"go there", do it in a seperate thread with less of your typical potty
mouth and I'll be happy to hash things out, back and forth. If your going
to switch from grounded grid to common cathode circuits in the same
thread... say so when you do it.

:>ALC is bad news for most all radios... dated technology that really
:>didn't
:>/ doesn't work well for the most part. Another topic thread please...

: Whoa! The basic ALC circuit works just fine for what it was intended,
: it works within it's limitations, and is VERY MUCH used even today!
: It's FAR from being "dated technology"! And it's used in both
: grounded-grid AND common-cathode amplifiers! You are WAY off base
: here, Skippy!

Whoa... back to you...!
Don't think so Frankie... once the horse is out of the barn... he's out.

Check the typical ALC circuit - amplifier time constants. Sure, ALC is
used today, but it's not the best control option.

If you were keeping up with current radio and amplifier technology, you'd
know the above statement to be true. Just like your rectifier equalizing
network recomendations are poop.

:>> (that is, explain why they needed to do that if sweep tubes are so
:>> adept at RF amplification?). And you have yet to find a TV that uses a
:>> 6146 as a sweep tube, or a currently produced RF amplifier that's
:>> legal for use between 24 and 35 MHz.
:>
:>Because they work pretty well in the intended application... what part
:>of denial do you live in..?

: No denial here: the intended application is an inexpensive amp with
: the trade-off of spectral purity and linearity.

... and they work very well... everything is a trade off frank, this is
one example of a practical trade off a lot of people felt well worth doing
for the end result.

:> I probably won't find a TV set with a 6146 on
:>board... but you boat doesn't float unless you go back to that repost
:>over and over.... like I should reprint your multiple "grid tied to the
:>plate"
:>posts over and over. Hey, what text I reposted would probably work....
:>what you directly posted would fail every time... big time tube failures
:>cost money.

: The difference, Skippy, is that I admitted my mistake, which you have
: failed to do until now.

Where was that admission frankie..? I can go back to review and clarify
my previous statements when asked, but my orignal repost of another persons
statement is not something to launch ww3 about. The end result is a lot
less damage than using your rf amplifier grid tied to plate multiple
postings.

:>So I made a few inquiries... turns out I can't find very many current
:>FCC certified Amp mfgrs and no current certified amplifier builders
:>for 24-35 Mhz applications. Not a cost effective place to be these
:>days... HF & VHF Amplifier production in general is down...

: Let's see, you are claiming that there are no legal amps for 24 to 35
: MHz because amp production is down? How about because the amps are
: illegal? Doesn't that strike you as a better reason why they aren't
: being manufactured? Duh...!

There are legal amplifier applications for services in the 24 to 35
Mhz range which also coincide with no justified market for them. The only
real answer comes from the FCC... as of this morning I have not heard back
from them them with the official answer.

:>But pre ban amplifiers are still legal and available on the
:>used market. There is no significant circuit difference from the
:>mentioned
:>35-54Mhz TPL amplifiers I provided Ebay Auction examples of; and
:>their pre ban cousins. Nothing wrong with a legal used pre ban
:>amplifier.

: Provided it is type-accepted/certificated for use on the service, and
: that such authorization is still valid. But note the difference here,
: Skippy: the prohibited frequencies are 24 to 35 MHz, and the amps you
: mentioned are 35 to 54 MHz. Don't you see something wrong with that?
: Or did you really think that I wouldn't check?

Pre-ban TPL Amplifiers I have are pretty much an exact circuit of the 35
to 54 Mhz units mentioned. Only the label changed... Their unmodified

operation for adjacent frequency same Radio Service applications is one of the questions I asked the FCC. Their official reply to me is what I deem the current best opinion.

Does original equipment type acceptance expire for legal equipment remaining in operation..? I would think not... even this magic broadcast station you say you work for does not lose the legal use of the transmitter through the years.

:>Wow Frankie' you sure hit the low bar language toilet... a clear sign
:>that you are on shaky ground...

: Hmmm... despite my ability to back up my arguments with facts and
: valid theory while you can't, just because I used the word "shit" a
: few times means that -I- am on "shaky ground"? ROTFLMFAO!!! (guess
: what the "F" stands for?)

Your arguments are fun to debate when your mouth isn't in the gutter. A lot of your facts are wrong or just plain out of date. Some could be useful when they are not enclosed in your bitter pill.

:> One might conclude that all the
:>mfgrs who made sweep tube amplifiers, the many handbook projects
:>and similar practical easy to construct rf AB2 g-g circuits contradict
:>you. Of course, you are right, they are all wrong...

: Your implication is that I am saying that these circuits don't work,
: when in fact they do. What I am saying is that sweep tubes don't work
: nearly as well as do properly designed RF power tubes, which is why
: the VAST and OVERWHELMING MAJORITY of manufactured RF amplifiers (both
: external and integrated) and radio handbook projects that use tubes
: use the latter!

OK ....! now we are getting somewhere. I like the first part of what you wrote... the second part is open for more information.

Sweep tubes are just one novel part of modest power g-grid rf amplifiers.

Amateur RF Amplifier Mfgrs are having a hard time in general regardless of the tube type. Many types of tubes in general are going off the radar screen and there are always much better choices for each application.

Crap rf amplifiers are made with many different tube types... knowning how they work and can be reworked is fun stuff.

:>> BTW, you STILL haven't answered the question, "Do you have a financial
:>> interest in the popularity of sweep-tube amplifiers"? So will that be
:>> a 'yes', a 'no', or a 'no comment'? I'm betting the latter.
:>
:>Your news reading program a bit whacked Frankie..? I answered

:>make any difference...

: Simplification in the face of obfuscation. So what's the answer? And
: you STILL haven't described your "classic" and "properly designed"
: sweep tube amp. Well?

I did in a previous post, but just so you will put it to bed... No.
In my opinion there is no realistic, viable Amateur or Commercial market
to justify mass building rf amplifiers amplifiers.

I expect to see more of the exisiting amplifier mfgrs go away within a
few years max.

See my Dentron GLA 1000 Amplifier article on the sonic server for some
examples of a classic sweep tube amplifier and what can be done to improve
it. "Properly designed" means a well researched practial circuit layout
which reliably works and preforms well.

because i hear KC8LDO on 27.555 really often. is it not you? i've not
seen you deny it even once.

>That's funny<

Tragic, actually.

****
True when nebo just admited to being the one doing it.

> I have never once heard it,<

Well that ends it then.

****
It sure does just like the guys who never heard truckers on 10 meters.

> why would Leland use 27.555<

To jam freebanders. He has exhibited the hatred towards them,
consistently trying to smear them with false accusations and lies.
He has indeed attempted to jam freqs where he is not permitted.

****
Wow Twist some heavy accusations or are they opinions?
Interesting though Nebo admitted to being the one so there goes that theory,
20 why would he use his call sign. Now I have never met the man but I can
only assume from his posts he is more intelligent than that. But that is
moot since nebro has gave a confession.

> remember he is not into Hf<

He lied, just like he lies about everything else.
You look kind of funny spinning your wheels attempting a defense of his
lies.

****
No Twist my defense is built on what you guys have said about him, you look
kinda funny
with your grandeous ideas, but they make for good reading,it is easily to
see your pattern of accusations and hatred towards certain individuals.

>you know as well as the next guy

If the "next guy" you refer to is yourself and the rest of "Arrons" named trouble-causing posse, he knows way better.

****
Twsit it is clear to see Aaron has a firm grip on your thinking, I am not sure what power he has over you but your infatuation with him borders on lunacy

>you or someother schemp from this NG is >using his call sign

Think about it what you are saying....who has always maintained cbers imitate hammies? Now do you really feel anyone here would imitate any of you akc pups? It has ALWAYS been the other way around....you hammies imitate us...hence the forging that had Lelnad and Dogie canned from their respective ISP's at the time.

>if you really do hear someone out there.<

There really are people there, you just have to listen.

>Funny part is I heard a kp 82 causing all kinda >grief with op's on 27.555 Is that you?

Now THAT was Lelnad. See, you do hear him where he shouldn't be. Busted again, Lelnad.

Determine the value (it'll be a range) of L905 and L907, respectively. Then
order them from http://www.mouser.com. Seems to me like they cary just
about everything under the sun.

How do you know what values are needed? Beats the heck out of me.

I think you'd better take your Prozac. I, and I'm sure there are others,
who find it quite odd that your main mission in life seems to be to rid the
world of illegal CBer's when you are neither a CBer nor a ham. I also find
it odd that you take offense at someone asking about your CB setup. After
all, this is a CB forum to discuss CB radio, is it not? But when anyone
asks you about what equipment you use, you take it as a personal attack.

What's the difference? The FRN is at www.frn.net. And why is he a troll?
I think he brings up a valid point.

I think pirates could make use of some of the freeband frequencies during
the day. In fact, I think a while back I did read about some of the pirates
trying some of the frequencies above & below the CB band. Don't know how it
worked out, nor have I heard any pirates there. Usually I only hear them on
or around 6955.

ID tag for his isp's news group server? <snicker> Heh, nope.

Actually, it's the Message-ID from a header of a post he wants you to
read. If you have a decent news reader, and the message he referenced was
still stored locally, you could click on it and read the article. If said
post was not stored locally, a decent news reader (like XNews) would
offer you the choice to search google. If your newsreader sucks, you can
always search the Google groups, using that Message-ID.

You're search engine might be broken. Feel free to use mine:

It's very simple to make a simple 11 meter dipole. Just take two lengths of 3/4" conduit around 8.6 feet long and connect them together with a wooden dowel. Be sure to connect the center conductor of your coax to one end, and the shield braid to the other end right there where the dowel is. Spray paint or varnish the wooden dowel to keep moisture out, and you have a handy 11 meter dipole. Just mount it vertically and you'll have one heck of an antenna. Be sure to insulate it from ground, though. You may also want to put PVC end caps on each end to keep moisture out.

A friend of mine built one of these and it worked quite well. Total cost should be anywhere from $10-$20.

See the thread "making a cheap homebase ariel?" for my reply on how to build
a simple 11 meter dipole.

Maximum legal power for a CB is 4 watts AM, 12 watts SSB. You can get
linear amplifiers for CB's, but they are illegal to use.

Probably because they don't have to get a license for the freq or buy
spectrum. They could use the low-power 900 MHZ band or 2.5 GHZ band, but
there's probably plenty of interference from other devices already there.

Found an interesting article in case anyone is using a wireless keyboard:

How many licensed hams are there within range of your 'machine' in the middle of the day? How many are not working and would be available for monitoring the repeater?

How many CBers are there in the same circle. Need I continue? OK I will anyway. There are lots and lots more CBers than hams...why? They don't have to take a test. Hams have to at least put out some effort.

And apparantly it also means most CBers are unemployeed.

> never.

As one who works in law enforcement, I think it's a stupid idea. Basically what happened was that the FCC told Congress that CB is too big of a problem for them to deal with so let local law enforcement deal with it. One of the problems with it is that most cops don't know a CB from a business band or ham radio. In other words, they're not trained to know what is or is not an illegal radio setup. There has been no training in this area by the FCC, even though the FCC stated when the proposed law was being debated that they would provide assistance to local law enforcement in this area. So unless a cop takes it upon himself to learn all the CB rules & regs (unlikely), CB complaints are probably just going to be handled like regular nuisance complaints (such as loud music). They'll probably just tell the offending CB operator to turn it down or turn it off for the night, and call it call complete.

The other problem I have with it is that most law enforcement is busy enough with real crime, and doesn't have the time to deal with Joe Blow's TV that's getting interfered with by "Gear Jammer's" CB next door.

It probably would be much easier for DOT personnel to check CB equipment in trucks, but I doubt the FCC would train them in what to look for, either. Many times you can't tell that a CB can operate on illegal frequencies just by looking at it. And many "export" radios look just like CB's.

And 28.085 is very busy with them today as I type this. I can't say for sure that they're all truckers, but they are definitely CBer's. All AM mode and no ID's.

CB may be used for business communications. I don't think there's anything
that says that advertisements are illegal, but it could be how you define
"business communications."

As these ads tend to be one-way broadcasts, I don't think that would be
infringing upon the 155-mile rule since they're not "communicating" with any
other stations.

To,

There generally is activity on the repeater during the day. But not on the
day I needed it :-(. I did also call on S20 the UK 2 meter calling channel.

> How many CBers are there in the same circle. Need I continue? OK I will

Yes agreed. This incident happened 7 years ago when there were a lot more
CBers, in this country.

>
>Tom
>

First of all, the topic here is CB, and no matter if one is a CBer, or
a ham, or neither, they have a right to post here.

Secondly, if you want to try and propagate the idea that I shouldn't
be posting here because I don't have this or that kind of radio or
antenna, go right ahead --- but don't expect me to participate in

something so silly, LOL.

Thirdly, if you were observant, you'd see quite a few in here that might appear to be on "missions" of one kind or another. Maybe you agree with them, maybe you don't, but I find it odd that the only one you are disturbed by is Mr. Aaron Voobner.

So if you want to expend energy trying to discredit Voobner, go right ahead. But don't be surprised when someone makes the observation that you're "on a mission". :)

I don't understand where you are coming from with that premise. The drivers
will STILL
be there; why move even if the MUF is down to talk to the next truck? And
we will STILL
hear the local ones--in my case I-85 between Kings Mountain and Charlotte,
NC. Since I
hear truckers up as high as 29 MHZ, then I will work to remove them as well.
We have a pretty
good group around here that LIKES it when 10 isn't "running". We have a
little roundtable group
on 10. Even THAT has been interferred with by a bandit. I went out and
found him in about 20
minutes.

But, as I stated below, there are some other single band radios being tried
that look like CB radios complete with beep and squeak junk. How long would
it be before
40 Meter, 50 watt Galaxy radios would be in truck stops if it isn't stopped
now?

Heard several of these at various truck stops along I-75 last weekend and previous, advertising truck washes, window tinting CB shops..
The ones I heard didn't seem to be running any power. Actually, I don't remember hearing any stations with anomalously long ranges.

CREDIBLE?? Har de har har har! Aanal Aaron has been proven wrong about
everything he ever posted. How is that credible?

BTW, where's the "proof" he offered to "Gladly!" post that somehow I',
"Steve"? He has no credibility; he ran and hid because I wouldn't stop
reminding him that he offered to post it.

CREDIBLE? I don't think so!

And how ya doing Georgie-girl Busck WA3MOJ, you anonymous troll?

cancel the ground plane kit and save you some $$$. youll get about 25-30 miles
at night with that setup

>

Check saturdays postings. There was a complete discussion
on the A-99. Good suggestions and tech references...

I have one, it's not performing well. (I can't get an acceptable
SWR) Now I'm looking for an online manual for it.
I've upgraded the coax to RG8. Now I have to get up on the
roof and try adjusting the antenna again.
Next step is to send the radio in for a check up.

Anyone know of a reputable shop in the South Bay Area/San Jose, CA.
There's a place in Gilroy I think...

Just for the record, the proximity of the transmitter and the receiver in
this setup makes it unlikely that interference will be a problem....unless
of course, you live next door to a person whom regularly uses one of the "A"
channels.

well do you think i love the bush situation????????? hell
no.........!!!! i don't ....but it is like michael savage
says......we have been reduced to voting for the lessor of two
evils........and that my friend is a danger to democracy and a danger
to our way of life and a danger.....a clear and present
danger..........all i can say is this......watch your ass, keep those
eyes in the back of your head.......load up on guns and ammo and wait
for 'them'to make their move, whoever they are...........because it is
coming ,.........sooner than we think.........and while we fritter away
the hours watching football , drinking beer, and being silly, our
enemies without and our enemies within are
busy.......................one day we will have to stand.........for
this country of ours one way or another.....it is not the bushes that
make us great..........it is us........we the people...........the
ones who do the dying, the ones that pay the taxes, the ones that put
up with this crap..........i get sick of it..............and it is
easy to throw up your hands and say it is over.......but it
isn't..........exercise that right to vote tomorrow....exercise
it......it is precious.......it is your right.......and believe me
when i say this........it is more powerful than anyone with a ton of
money can possibly imagine..........if only we could grasp this simple
truth.......if only.........................

All rigth Alan, you've got 3 days to retract that statement. I mean it. If you don't come to your senses in three days I'm gonna Kline your ass suckka.

To each his own I guess. I am a square, simplistic, kindda guy. I like my electronics basic and simple in shape and color. I find things much more appealing that way. I like only features that are necessary and useful. To be honest I don't even like Ch 9/19 switches on CB's, but no one ever said I was normal.

I agree that you gotta give the customer what they want. Unfortunately for me most people want "Big Chrome" oh well.

Dave

Actually Mopar, In my reply I mentioned the laws don't pertain to the NG or issue. Mentioning those laws, however, illustrates what happens when people start passing laws willy nilly to solve a problem. Laws don't mean jack shit. If you have a law banning something why do you need two? That doesn't solve the problem it just placates the ignorant public. The problem rolls on. And many times rights and privileges that have nothing to do with the problem get steam rolled in the process.

Agreed. So are you saying that you are niether a ham nor a CBer?

> Secondly, if you want to try and propagate the idea that I shouldn't
> be posting here because I don't have this or that kind of radio or
> antenna, go right ahead --- but don't expect me to participate in
> something so silly, LOL.

That's not at all what I'm implying. I just find it odd that since you seem
to be niether a ham nor a CBer, that you are devoting so much time to
getting rid of illegal CBer's. It's kind of like someone who's not a
numismatist (coin collector) taking part in the dipping vs. no dipping
debate.

> Thirdly, if you were observant, you'd see quite a few in here that
> might appear to be on "missions" of one kind or another. Maybe you

I understand Jerry Oxendine's mission, and it's one that I don't disagree
with. I understand the mission of some of the troublemakers in here who
just want to troll. I understand your mission also, but I don't understand
why you're on it. And no, I'm not disturbed by it. Just curious as to why
someone would expend so much energy on a matter that doesn't matter to them.

> So if you want to expend energy trying to discredit Voobner, go right
> ahead. But don't be surprised when someone makes the observation that
> you're "on a mission". :)

I've never tried to discredit you except the time you denied making the
statement that all 10 meter radios are illegal for amateur use, but I don't
want to drag all that out again.

Please stop twisting everything I say around. I know you love to debate,
but may I suggest you try alt.support.ocd?

As long as they're not causing interference to anyone and providing
entertainment to people who want to listen to them, what's the problem?
Yes, it's illegal to transmit on unathorized frequencies; we all know that.
The pirates know that also and they're the ones taking the risk. If they're
going to take the risk of getting caught to put on a quality broadcast, then
I'll listen in.

OK, I was wondering about that as broadcasts are illgal for hams, also. I just don't have a copy of the CB rules handy. In that case the ads would be illegal. Not that it really matters.

I also heard the one a few days ago for the Mexican "gentlemen's club" or whatever they were advertising.

The range you'll have depends on several things. Not only the type of antenna and height that you mentioned, but also if your radio is putting out full power. It also depends on your surrounding terrain. If you live in a valley or surrounded by tall buildings, then your range will be limited.

As far as gain is concerned, it is a subjective value. You have to compare gain against something else, such as a dipole in free space.

And you have the right to that opinion. I feel if pirates are interfering with other stations on SW, AM, or FM band, then let them be. I'm sure you'll bring up the arguement tht every FM pirate interferes with licensed radio stations, however there is documented prrof of some that didn't or don't.
I will give you that pirates or outbands shouldn't interfere with public services bands (ie: police, fire, emergency, etc.)

Actually, there have been wireless mice that use the frequency for a while. A friend of nime had one. Key word being HAD. He was yakking with a friend of his on 27.145 LSB one day (he's got his rigs and puters in the same room) and it blew out the recieving unit for the mouse. Took him getting it repaired twice and buiyng a new one once to figure out what the heck caused it. My recommendation is don't buy one if your gear and computers are in the same room or adjacent rooms.

You shouldn't have that much RF in your shack.
My gear is not only on the same desk as my computers, but also the same bench where I do my deisgn work. No problems at all. But then I don't have a bunch of RF on my coax shield.

So, Ham Radio is the same as CB, just more toys (frequencies) to play with?
Thats what I suspected.

The question is not how Ham Radio COULD be different than CB. The question is
how IS Ham Radio different. The word "is" requires one to define Ham Radio by
how it is being utilized, not by what it claims.

In theory, Hams can also experiment with with electronics as well. In reality,
the overwhelming majority of Hams are appliance operators.

Ok, I'm not new to the CB world, but I am new to amps. I've never had the money before to install one before so here is my question. I have a Cobra 29 setup right now, peaked and tuned and made right by my friendly neighborhood CB shop-owner, top-o-the-line Coax, a Wilson 2000-T antenna and I feel like I have a POS radio shack radio with 8 feet of built in coax and magnetic mount 3 foot whip antenna that ain't even grounded right. I've got the hardware I want but I missing one thing....POWER....I know it's illegal, I know more than a few people who own and operate amps on a daily basis. Its about a much a worry for me as getting pulled over for speeding(which happens often, but I don't get tickets....wonder why?)....but anyway, I am well aware of the legality of it, and don't need anyone rippin my ass about it....thanks! Ok, what should I, and can install to make my sudden feeling of powerlessness go away. Don't worry about cost, that's my problem, just tell me what would work best. Thanks everyone and I'll be looking forward to hearing some replys soon.

Jason aka "ET"
Look for me at the I-95/20 in the great state of South Carolina or 95/16 in GA

Message-ID: <pMydnQO56pG47VqgXTWc3g@comcast.com>
Source record: 143014

What is is that you expect this amp to do for you?

High power dosen't help in DX, on CB or 10M, when the band is closed, it's CLOSED.
When it's open, 5W will do the job.

If I were you, my first move would be to improve the antenna.
A steel whip is pretty hard to beat, though tall.

Anything smaller is less efficient, and you're throwing your power away.

431. High angle antennas

Newsgroup: rec.radio.cb
Date: 2002-11-05 07:15:49 UTC

Anyone here ever tried a high angle antenna?

I've seen them suggested for emergency work on HF.
The idea is to deliberately make the radiation angle high, and optimize
local coverage, instead of the normal low angle, long range approach.

Once again, I have never said that grounded-grid requires
neutralization, and have actually said that it doesn't. Do you
remember this from a previous thread?

>: Grounded-grid operation eliminates the need for neutralization, and
>
>Yes... a major advantage. Neutralization is a pain in the pazzoo, most
>often easily avoided in grounded grid amplifiers.

Enough with the lies, Skippy.

>It is actually easy for a grounded grid (out of phase) amplifier

The grounded-grid is an "out-of-phase" amplifier? Do you mean an
'inverting' amplifier? I hope not, because that would mean that you
don't even understand amplifier fundamentals. The grounded-grid is a
NON-inverting amplifier, which is the reason WHY it doesn't require
neutralization! Didn't you even read my two paragraphs you quoted
above?

> to have
>big time stability problems, see the previously mentioned
>http://www.vcnet.com/measures pages for well done text on the subject.

There are some excellent texts there, but can you be more specific
about which page? Is it the page that describes how the input needs to
be a high-Q tank so it doesn't screw with the exciter? Or the page
that explains why the filaments need to be left floating (maybe
Palomar and Dentron didn't read that page...!)?

> Out
>of phase circuits are not the cure all for neutralization. Shielding and
>lower Cgp are very nice advantages to using some tetrode/pentode valves in
>grounded grid layouts. Phase shift hopefully near 180 degree ballpark is
>just part of the nature of the layout and is also a major benefit of
>g-grid circuits.

As I said before, the grounded-grid amplifier is a non-inverting amp.
You must have misread those texts, perhaps thinking that they are

inverting amps because the plate CURRENT is out of phase with the
input. Here's the same lesson in the basics but worded a bit
differently: The reason neutralization is required is because of the
electrostatic coupling from the interelectrode capacitance feeding
back to the input. The key words here are "electrostatic" and
"capacitance" -- you don't need neutralization for a grounded-grid amp
because the input and output VOLTAGES are in phase!

>It is quite possible to have stable in (relative) phase grid driven rf
>amplifiers that do not require neutralization.

...oh brother

>But the applied circuit reduced Cgp values of the grounded grid
>layout are a big time stability advantage. Don't play it down frankie,
>it's a fact. Low C values are also helpful in AB1 circuits,
>example sweep tube grounded grid layout has the benefit of 1/2 C for your
>common cathode AB1 circuit, which contributes much to stability and
>elimination of your beloved neutralization requirements. G-Grid layouts
>can really help tame the gremlins.

The FACT is that Cgp DOESN'T CHANGE just because you put it in a
grounded-grid configuration! A grounded-grid amp will have a different
INPUT capacitance because the input is on the CATHODE, not the GRID.
And that input capacitance is usually considerably LARGER than the
input capacitance of a common-cathode amplifier using the same tube!

>:>Triode connected tetrodes (grounded grid) show a degree of improvement
>:>in distortion figures as opposed to grid driven service.
>
>: Yes they do, primarily because of the very low impedance required for
>: the input, and the fact that the input power is carried through as a
>: portion of the output power. Not because of grid shielding (LOL!). But
>
>Your trying to cut and paste things out of context again frankie. The
>above statement does stand on its own as fact. At no point did you see
>me write "primarily", "mostly" or anything close.

You wrote "a degree of improvement" without any explanation why.
That's pretty vague, Skippy. I cut-and-pasted nothing out of context.
The context was the improved distortion of running a tetrode/pentode
as a grounded-grid triode. Since we already know that linearity is
improved by triode operation, the primary cause of distortion is going
to come from grid-current transition. The lower the impedance of the
input signal, the less it will be distorted when the grid current
causes the impedance at the cathode to abruptly change. And since the
output power is the sum of the input power and the amplified power,
undistorted input power that is carried through to the output will
naturally reduce the output distortion. None of that has to do with
grid shielding. Now how is that out of context, Skippy?

>Actually, had you bothered to post the proper statement path facts... grid
>shielding means less current in the applied example. Less screen current
>is very very nice...
>Exciter feed through power of the example AB2 grounded grid amplifier is
>a big time "freebie" you don't see in AB1 circuits. Makes a typical 100
>watt amateur hf radio a pretty nice match for a 4/6 sweep tube layout.

And ONCE AGAIN you are demonstrating your ignorance of amplifier
fundamentals. A grounded-grid amplifier requires drive power because
it's fed to the CATHODE, which MUST conduct in order for the amp to
work, grid current or not! Another one for the "Skippy's ignorant
remarks" list.

>: then again, the grid-current distortion is much greater from a sweep
>: tube than from an RF power tube because sweep tubes aren't designed
>: for smooth transition into grid-current conduction -- and configuring
>: a sweep tube as a grounded-grid triode doesn't change that fact.
>
>They don't have to have ultra smooth transistion. The distortion is
>easily dealt with using a proper Q tuned input as found on many well done
>Grounded Grid Layouts. The reasons for/why are quickly explained in most
>Radio Handbooks... see "flywheel effect" related to rf amplifier tuned
>input circuits.

That's the same ignorant RF voodoo hogwash hype that Griffey used to
try and sell his Class C 'linears'! Aren't you EVER going to get a
clue, Skippy? In order to be linear it must have 180 undistored
degrees of conduction, flywheel or not!

>:>What might be called more passive gain operation of the screen and
>:>supressor grids in an AB2 amplifier, does not deny their actual operating
>:>shielding function and reduced Cgp in the grounded grid circuit.
>
>: "Passive gain operation"? Where do you come up with this shit, Skippy?
>
>Potty mouth again...

What does that have to do with sweep tubes?

>Means the G2 & G3 electrodes have no traditional or active potentials
>applied,

By "active" potential do you mean anything other than ground? I hope
not, because ground potential is a very active part of a grounded-grid
amplifier. And what is a "traditional" potential? If you mean
something like 'bias potential', then yes it does have a "traditional"
potential -- ground.

> but are part of the circuit without gain contributions.

Except for their contribution to the effective grid of the
triode-configured sweep tube. If you think they don't contribute to
the gain then leave them floating and see what happens to your gain.

> We
>receive the benefits of reduced 1/2 Cgp and the shielding function which
>greatly contribute to the amplifier stability.

...this is unbelievable. I'm practically spoon-feeding you fundamental
electronics, but instead of verifying the facts you just keep rambling
on with your voodoo RF theories. The more you talk the more outrageous
your theories, and the more evident it becomes that you have never had
any formal education or professional experience in electronics...

This is turning out better than I had hoped!!!

>:>> even though it's clearly designed as a triode. Or maybe you can

>: the same.
>
>We can go anyway you want to go frankie... but this whole thing started
>out as a classic sweep tube amplifier thread, remember..?

More lies. It started with this:

>Hey Skippy, you have a couple questions outstanding yourself: What
>services between 25 and 34MHz are allowed to manufacture and market
>power RF amplifiers? And what make/model of television used the 6146
>as a sweep tube?

So far you have conceeded the 6146-as-a-sweep-tube issue, but you
STILL haven't found a radio service that can legally use an amplifer
between 24 and 35 MHz. You said that it's really easy to look it up on
the FCC website, but so far you have shown absolutely NOTHING to back
up your claim.

> I want you to
>quickly name the actual circuit your trying to go over so the readers
>and I clearly understand what planet your currently in orbit about. You
>were taking me to task about sweep tube label specifics, now it's my turn
>to tell you to be specific about the circuit you're currently trying to
>describe in your posts...

So you HAVEN'T been paying attention, have you? I frequently referred
to the Swan 500 as an example of a common-cathode sweep tube design,
and for the grounded-grid design I have been using your examples of
the Palomar and Dentron, as well as the KLV. If you want a design
based on an RF tube, just pick most any Henry, Johnson, Kenwood, or
RCA, or any military radio (interesting how the military never used
sweep tubes for RF power applications, isn't it?).

>:>In short, all mfgrs used what they thought the most practical part and
>:>circuit
>:>trade offs... which probably included many short cuts... You claim to be
>:>a big time broadcaster type... ever seen a station take shortcuts..?
>
>: The tradeoff was based on cost, and that's all. The buyer sacrificed
>: linearity and spectral purity in order to get a cheap amp.
>
>The linearity and spectral purity were more than good enough. Good enough
>to be passed by the FCC for sale as legal amplifiers.

That seems to be your rally-cry for these amps. But you fail to
provide the said FCC specifications, and the conditions under which

the amps passed those specifications (low drive, reduced power,
external low-pass filter, etc). You also fail to mention that the
authorizations that were issued for most of those amps have since been
withdrawn.

Your last leg is beginning to buckle, Skippy!

> Through the
>60's, 70's and 80's, Low cost legal Sweep Tube Amateur RF Amplifiers which
>preformed well, their linearity and spectral purity specs quite usable.

They were bought, built and used because they were cheap. Or haven't I
said that already?

>Thousands were sold through the years...

Asbestos, pet rocks, and O.J. Simpson have all had their seasons of
popularity.

>:>The Swan Radios are not grounded grid circuits... as we have been taking
>:>here. But you want to interchange sidebar off topic circuits.... Nope,
>:>"wouldn't be prudent at this conjecture.."
>
>: That has been the discussion all along, why change now?
>
>Swan Radios are not traditional grounded grid circuits.

No kidding.

> If your going to
>"go there", do it in a seperate thread with less of your typical potty
>mouth and I'll be happy to hash things out, back and forth. If your going
>to switch from grounded grid to common cathode circuits in the same
>thread... say so when you do it.

The discussion all along has been the use of sweep tubes in BOTH
grounded-grid AND common-cathode circuits. Pay attention to the
discussion and you won't get lost anymore.

>:>ALC is bad news for most all radios... dated technology that really
>:>didn't
>:>/ doesn't work well for the most part. Another topic thread please...
>
>: Whoa! The basic ALC circuit works just fine for what it was intended,

>Don't think so Frankie... once the horse is out of the barn... he's out.
>
>Check the typical ALC circuit - amplifier time constants. Sure, ALC is

>used today, but it's not the best control option.

It's not the best control option, but it's a very good and effective one. And that's not what you said -- you said that an ALC circuit was "bad news". If they were such "bad news" then why have they been used for decades and still used in new designs even today? And what the heck (is that tame enough language for your sensitive ears?) are you talking about with "amplifier time constants"? The ALC is a type of compressor circuit, of course it has time constants. It wouldn't work without them!

>If you were keeping up with current radio and amplifier technology, you'd
>know the above statement to be true. Just like your rectifier equalizing
>network recomendations are poop.

LOL! Tell ya what, Skippy. You find ANY authoritative reference that says the voltage equalization network is NOT a preferred protection method for series silicon rectifiers (power supply rectification, not series Vf regulation) and I'll concede the issue. Matter of fact, I'll concede the entire discussion and leave you to your sweep tube amps in peace. Fair enough? I'll even concede if your reference says it's an outdated practice. All you need is JUST ONE, Skippy. Can you handle that?

>:>> (that is, explain why they needed to do that if sweep tubes are so
>:>> adept at RF amplification?). And you have yet to find a TV that uses a
>:>> 6146 as a sweep tube, or a currently produced RF amplifier that's

>: the trade-off of spectral purity and linearity.
>
>... and they work very well... everything is a trade off frank, this is
>one example of a practical trade off a lot of people felt well worth doing
>for the end result.

They work very well provided they are used within certain limitations. More often than not those limitations are routinely exceeded by the urge for "mo' power" and "bird watts".

>:> I probably won't find a TV set with a 6146 on
>:>board... but you boat doesn't float unless you go back to that repost

>statement is not something to launch ww3 about. The end result is a lot
>less damage than using your rf amplifier grid tied to plate multiple
>postings.

Ok, then it wasn't an admission. But your claim that you were just
reposting another person's statement is bogus, and I have previously
quoted and referenced the post as proof. If you don't know how to use
google then that's your problem.

>:>So I made a few inquiries... turns out I can't find very many current
>:>FCC certified Amp mfgrs and no current certified amplifier builders

>: MHz because amp production is down? How about because the amps are
>: illegal? Doesn't that strike you as a better reason why they aren't
>: being manufactured? Duh...!
>
>There are legal amplifier applications for services in the 24 to 35
>Mhz range

So you have claimed, a claim which I have proven false and you have
not defended with any facts at all.

> which also coincide with no justified market for them. The only
>real answer comes from the FCC... as of this morning I have not heard back
>from them them with the official answer.

Like I said, post it when you get it. Then I'll send in my own inquiry
and we'll see how the two answers compare. BTW, did you submit your
query to an authoritative source? You know, a representative that can
officially and substantively declare one way or another the legality
of an issue such as this? Matter of fact, what exactly was the
question you asked in the query?

>:>But pre ban amplifiers are still legal and available on the
>:>used market. There is no significant circuit difference from the
>:>mentioned
>:>35-54Mhz TPL amplifiers I provided Ebay Auction examples of; and
>:>their pre ban cousins. Nothing wrong with a legal used pre ban
>:>amplifier.
>
>: Provided it is type-accepted/certificated for use on the service, and
>: that such authorization is still valid. But note the difference here,
>: Skippy: the prohibited frequencies are 24 to 35 MHz, and the amps you
>: mentioned are 35 to 54 MHz. Don't you see something wrong with that?
>: Or did you really think that I wouldn't check?

>
>Pre-ban TPL Amplifiers I have are pretty much an exact circuit of the 35
>to 54 Mhz units mentioned. Only the label changed... Their unmodified
>operation for adjacent frequency same Radio Service applications is one of
>the questions I asked the FCC. Their official reply to me is what I deem
>the current best opinion.

Modification to the lower frequency range is going to require
component replacements in most of the tuned circuits. Probably not
even worth the effort. But if it gets your rocks off, go for it. Even
if you can't use it for commercial services you can still use it for
amateur radio.

But as far as frequency range modifications of type-accepted or
certificated equipment, you can probably find the answer yourself in
Part 2. I'll post the link if you promise to read it.

>Does original equipment type acceptance expire for legal equipment
>remaining in operation..?

What difference does it make if the equipment is used or not? When the
FCC drops the authorization it get's unplugged. Period.

> I would think not... even this magic broadcast
>station you say you work for does not lose the legal use of the
>transmitter through the years.

"Magic" broadcast station? What's 'magic' about it, Skippy? And have
you ever studied the broadcast regs? Have you ever studied the regs AT
ALL? I doubt you have read anything beyond what you needed to get your
ham ticket.

>:>Wow Frankie' you sure hit the low bar language toilet... a clear sign
>:>that you are on shaky ground...

Oh Skippy, I am SO sorry to offend your holy little ears! But despite
the methods by which I freely choose to express myself, there is
nothing wrong or 'dated' with my facts. You can verify them at your
leisure.

>:> One might conclude that all the

>they work and can be reworked is fun stuff.

Ok. I agree with everything you just said. But what does it have to do
with the paragraph to which you reference those statements? Did I make
a statement in that paragraph that was wrong (or perhaps 'outdated')?

>:>> BTW, you STILL haven't answered the question, "Do you have a financial
>:>> interest in the popularity of sweep-tube amplifiers"? So will that be
>:>> a 'yes', a 'no', or a 'no comment'? I'm betting the latter.

>: sweep tube amp. Well?
>
>I did in a previous post, but just so you will put it to bed... No.
>In my opinion there is no realistic, viable Amateur or Commercial market
>to justify mass building rf amplifiers amplifiers.

I didn't suggest "mass building" of RF "amplifiers amplifiers". The
question was very simple; and yes, you answered it indirectly in a
recent post.

>I expect to see more of the exisiting amplifier mfgrs go away within a
>few years max.

Perhaps. There are already enough amps and tubes out there to keep the
atmosphere glowing for many, many years. But then again, there are
bound to be power-junkies that will want to poke new holes in the
ozone layer and ignite the Van Allen radiation belts.

>See my Dentron GLA 1000 Amplifier article on the sonic server for some
>examples of a classic sweep tube amplifier and what can be done to improve
>it.

I looked at one of the two articles. Most of the mods looked ok,
although the commentary was somewhat, ...well, bad. I think a zener
would be better for meter protection, as the non-linear current
characteristics of the other diodes are bound to change the linearity
of the meter. And I have some misgivings about cutting off the tube by
raising the cathode potential to some unknown positive potential while
the filament is grounded -- it's just begging for a filament-cathode
short. I think a better method would be to tap the transformer for a
quick-&-dirty negative supply, then use the relay to pull G1 south on
receive. An even better idea is to scrap the piece of junk for parts
and start from scratch.

> "Properly designed" means a well researched practial circuit layout
>which reliably works and preforms well.

Those are subjective terms. If you do enough research on sweep tube
amps you would discover everything that I have said many, many times:
The most important issue for sweep tube amps is grid-current
distortion, and that some means must be used to prevent it. High-Q
tank circuits (the "flywheel" effect) won't do it. The most common
method is by the use of an ALC circuit, which isn't a difficult
circuit to add to most amps. Ignore it all you want but them's the
facts, hard and cold, and not open for interpretation.

Sometimes you have to do what you have to do. "Version 1.0" of our
device was similar to yours. The only problem was that it was only
effective on one channel. The bozo we had targeted was one of those guys
who dialed around looking for other people having a good time, and then
proceeding to agitate them. "Version 2.0" was made from parts of a junk
CB, the PLL and transmit buffer stage. By sweeping a VCO, you
effectively blank all the channels, which was the ticket for this
particular idiot.

Improve the antenna first. Now that you're radio is peaked, it won't
work with the amp anywhay.

While it was clearly an effort to block someone's receive, the fact that
it was done with a part 15 device, under the guise of "experimenting",
would have resulted in nothing more than a warning from the FCC, if the
only person who could hear it, actually complained. The fact that the
only person who would have heard it, was also guity of breaking far more
serious FCC rules, made his complaints unlikely.

Besides, it was over 20 years ago. I didn't care then.

I see that little exerpt of mine that I sent you in E-mail have given
you some more ammo. Bravo!

> See, besides trying to take your advice
> concerning asking the FCC agent, I was also taking your advice as to not
> believe everything I was sent....so I admit, that claim had me curious,
> so I went and looked for myself. Are you still in business?

I was never seriously "in business". Two other local guys had a dealer
franchise, and sold radios to the local guys. I was the guy who did the
repair work. And believe me, I saw my share of "clip and peak jobs, gone
horribly wrong", in my day. I spent most of my time, making borderline
unstable radios like Galaxy's, who had already seen the screwdriver,
operate with some stability and cleanliness.
It took a while to undo the "CB myths" that most of the locals bought
into, but after hearing what a properly set up radio could sound like,
they finally started to see things my way, and I had a ton of business
as a result.

But that was about 5 or 6 years ago now. The two guys who ran the
"supply" side of the business, parted ways. One is now a ham, and the
other hangs out on internet chat rooms, looking for kinky sex. I haven't
had the time to keep up with repairs, and I lost contact with many of
the people when I moved away, a couple of years ago.

>

> him, but several reasons why that would not be possible and the fact
> that he couldn't lend credibility by verifying your story came up when I
> actually tried to do what you suggested.

I have many other stories that I could tell you. I have a long and
colorful history with CB radio, dating back to 1970. Many of the people
involved, I haven't seen in 20+ years, some are dead, some I run into
occasionally on the ham bands. Most of these stories are unverifiable,
as they happened too long ago. But they are fun to reminisce about over
a beer or two. We did some crazy things back then, when we didn't know
any better.

> What's good for the goose.......

That's not exactly true. A sociopath is someone who make a habit of
thumbing his nose at the rules of society, or the idea of society
itself. Someone who views the ideals, morals, and principles that make
up a cohesive society, with contempt. Someone who either doesn't realize
or doesn't care about infringing on other people's rights, when they go
though their daily routine.

>
> >I made the device, and another guy planted >it.

A remote car control is effective on only one channel. The final device
that I made swept through all 40 channels. That was a little more
complex to make.

>
>
> >I guess it never occured to him to use his >mobile. Good thing too, or
> >we would have had to risk attaching another >device to his car.
>
> "Another" device? To his CAR? You broke several laws, dintcha?

Not to the best of my knowledge. We didn't have to trespass to plant the
device, the device was part 15 covered. There might have been a grey
area over the true intended use, but hey, it was better than tieing the
coax of the guy's antenna to a car bumber and driving away like another
local had suggested.

did he mention anything about dx? if you want a good clean sounding and powerful signal your best bet would be a Texas Star 500 or 667. these two amps are about as big as you can go without having to upgrade your alternator and they give you plenty of power

>minutes.
>We are confident, however, that action WILL >be taken because
unlicensed operators >cannot be allowed to roam everywhere they >wish.

I am talking about when the dx fades so will the truckers gravitate back down out of those bands......the only reason they are there is because of the lack of traffic there. I am NOT defending or condoning it any way, merely stating why they are there and why they will soon be gone.

>Eventually, they would land on some >frequency that has vital uses and
won't be >tolerated.

Ummmmm.....not a very good chance of that happening with your typical export radio.

>But, as I stated below, there are some other >single band radios being
>tried that look like CB radios complete with >beep and squeak junk. How
long would it be >before
>40 Meter, 50 watt Galaxy radios would be in >truck stops if it isn't
>stopped now?

Well, now that you mention it, technically they would be legal, same as the Galaxy 10 meter radios are legal for authorized hammies on those freqs. Besides, how long have export radios been entering the country? Much longer than this current cycle and certainly much longer than this new crop of intruders that suddenly appeared on ten this cycle.

>Better to deal with it now than to just wait and >hope the problem goes
away. Even with the >waning cycle, it will STILL be a local
>problem wherever the truckers are
>talking.

I think the truckers will move back down once it's quiet again. Same thing every cycle.

See above

>Some of those manufacturers are already >offering single-band, CB look-alike radios. >Test- ing to see if there's a market? Maybe. >There >is, for example, a Ranger 15 Meter(?)--correct >me if I am wrong >about the band or >mfr-----and I think I saw such features as echo >and R-beep.

I think I may have read a thing or two about 10/11/12 meter radios.

>There are some others being market-tested to >see if anyone will buy them. (Shudder)
>Interesting.....to say the least.
>Don't
>know about you, but I can see where that is >heading, and we hope to >head it off.

Since it really doesn't concern me one way or the other, I wish you good luck.

>Well, it bothers the hell outta me. All they need >to do is just go >back to the 40 channels,
>and stay the devil out of 10-12 meters and the >issue would go away.

Do you know of or have you heard of any freebanders in the 15 meter range?
Pirates? There is a difference between the two (really) and the sometimes misapplied application and non-interchangeablity of the two once again highlights the ironic matter I spoke of,,,,,,,some of those who are supposedly licensed for communications have the most difficult time with it and with expressing themselves clearly.

>What the "militants" do within the 40--even on >*some* of the "freeband"--doesn't really >concern me.

"Militants" got me chuckling.....I guess we can apply that term to some of the more aggressive types among this forum....a small observation....when one thinks of agressiveness on rec.radio.cb, why is it that those that come to mind are non-cbers?

>I just want to turn on my 10 Meter band and >hear.....(quiet), >or Dah di-Dah-dit, Dah, >Dah, DiDah (CQ), >NOT "Ah 10-4 driver".
>Jerry

You have every right to expect your bands to be free from non-licensed individuals. The bad apples in the service are another story.
An example can be found in the few angry hammies trying to get heard on the freeband on almost a daily basis. I think that poor bloke in Kansas is going to pop a vessel, he's so desperate to be heard, he's taken to ghost talking (yes, he is DEFINITELY a hammie). The anger coming from Oklahoma could be bottled and sold at the Apollo as a hit (also another hammie) and the desert, well, most of them guys been in the sun too long....one thinks he hears things rest of the world can't.....really,

Jer..you really are missing the fun :)

Uh-huh.....I hear cw on 555 at times.....it doesn't bother me...even when it's vulgar.....when it's benign, I sometimes even answer....hell, tune in and listen on a Saturday afternoon or night...I guarantee you'll hear it.....Sunday morns, too!

No one cares. No one cares at all how they feel about cb...they are, and have always been...i-m-p-o-t-e-n-t except to themselves.

>Twist, I think they are like a morning hard on,<

Yea,,,we know they are dicks.

>you really have no
>control over em.

I have the ability and the right to be free of their harassment and to make them conform to
their TOS concerning such actions.
If they obeyed rules and didn't proudly violate and flaunt their violaions (such as yourself), they wouldn't have antything to complain about concerning such things. they are upset because they are impotent and we are not.

>You have cared enough to respond to leland >and the rest of the Aaron
>posse for how many years now?

Dunno how many years, but I do respond each time my chosen handle is addressed.....oh yea,,,,and when malicious fallacies are put forth concerning myself or another, or when a lie is attempted concerning cb....these are what the poor guy referred to as a "crusade."...hardly,,it;s merely pointing out the bullshit, nothing more, nothing less.
On a note of truth, Lelnad KC8LDO didn't post under his real identity for a few days (he was busy shilling)....when he started doing so again, he invoked my spirit, chanting my name in his post to another that had nothing to do with myself whatsoever. Being the polite guy I am, I gave him what he was seeking, temporary validation from me.
Claims are more valid when they are true, WA3MOJ...try to be a bit more accurate and you too, may come across as semi-believeable one day.....but very doubtful.

theres a large group of french speaking people all over the world who use 14.800-14.999. you can hear them in the carribean working back to france or the guys in france working those french islands in the pacific and sometimes three way qso's between them all. they've been there for at least ten years that ive monitored the hf spectrum. the same goes for 21.800-21.999. these guys run good gear and operate as clean as any ham and cleaner than all the ham bands.

Ok, I'm not new to the CB world, but I am new to amps. I've never had the money before to install one before so here is my question. I have a Cobra 29 setup right now, peaked and tuned and made right by my friendly neighborhood CB shop-owner, top-o-the-line Coax, a Wilson 2000-T antenna and I feel like I have a POS radio shack radio with 8 feet of built in coax and magnetic mount 3 foot whip antenna that ain't even grounded right. I've got the hardware I want but I missing one thing....POWER....I know it's illegal, I know more than a few people who own and operate amps on a daily basis. Its about a much a worry for me as getting pulled over for speeding(which happens often, but I don't get tickets....wonder why?)....but anyway, I am well aware of the legality of it, and don't need anyone rippin my ass about it....thanks! Ok, what should I, and can install to make my sudden feeling of powerlessness go away. Don't worry about cost, that's my problem, just tell me what would work best. Thanks everyone and I'll be looking forward to hearing some replys soon.
Jason aka "ET"
Look for me at the I-95/20 in the great state of South Carolina or 95/16 in GA
==========
You in a big truck? I would't trust your coax..check it....maybe chuCK it altogether. Your antenna system may need some improvement. For power, you don't need more than 100 watts or so......just a little dab will do ya'. Go with something simple and small like a Palomar or Texas Star...they can take a pounding in a truck.

>While it was clearly an effort to block >someone's receive,

Makes it illegal....end of story.

>The fact that the only person who would have >heard it, was also guity of breaking far more >serious FCC rules, made his complaints >unlikely.

Hahaha....no way, dude. Two wrongs do NO make a right.

>Besides, it was over 20 years ago. I didn't care >then.

>A perfectly legitimate use. It's a shame that we >were so close to that poor CBer (snicker!).

Poor cber? Appears you were/are one of those "poor cbers"...even as far as being a dealer/repair shop that has provided illegal services in srtcit violation of FCC rules.

>I see that little exerpt of mine that I sent you in >E-mail have given you some more ammo. >Bravo!

Were you drunk when you sent it? You never mentioned anything concerning your status as an illegal OR a dealer...that was sent to me by an upperclassmen who is familiar with your hypocrisy. There are several of your posts that contradict yourself......most recently,,,your inquiry as to what "slurp" was referred to in your headers. Or your several accesss sites through, around, and some that have nothing to do with Villanova U that you claim don't exist.

See, besides trying to take your advice
concerning asking the FCC agent, I was also taking your advice as to not believe everything I was sent....so I admit, that claim had me curious, so I went and looked for myself. Are you still in business?

>I was never seriously "in business". Two other >local guys had a dealer franchise, and sold >radios to the local guys. I was the guy who did >the repair work.

You claimed it yours back then. Another contradiction.

>And believe me, I saw my share of "clip and >peak jobs, gone horribly wrong", in my day. I >spent most of my time, making borderline >unstable radios like Galaxy's, who had already >seen the screwdriver, operate with some >stability and cleanliness. >But that was about 5 or 6 years ago now.

Riiiiiiiight! And you sudenly saw the light and everyone else who happens to partake in what you did is now a federal criminal (your words). So I guess you speak from experience as a self-admitted federal criminal?

>Believe me, I know what you're trying to do,<

You do? I thought I was trying to take you up on your offer of asking him, but several reasons why that would not be possible and the fact that he couldn't lend credibility by verifying your story came up when I actually tried to do what you suggested.

>I have many other stories that I could tell >you.

S'ok.
It would have been much easier on you to admit you are a hypocrite instead of denying and lying about it over the past how many months.

>but if you knew this guy, you wouldn't be >defending him or berating the actions that our >local group did to get rid of him.

Hey, the law is the law, remember? You are a sociopath (your words) if you deviate or make allowances, such as selectively ignoring laws certain laws, like dx or going above the posted limit in the desert. What's good for the goose.......

>That's not exactly true. A sociopath is >someone who make a habit of thumbing his >nose at the rules of society, or the idea of >society itself.

Well, you claim I was one for disrespecting the mundane laws of dx and freebanding. Yet you had the illegal hack shack and somehow view yourself above that of a simple freebandng dxer...hahahhahahah...keep on keeping on....!

>I made the device, and another guy planted >it.

So it was also a conspiracy to break the law.

>If that's what you want to call it.<

Look it up......I call a spade a spade.

> But it did it's job.
>lasted for almost a
>week before we had to change batteries. In >about a month, the grade
>"A" A-hole was gone

Remote car control, huh? Those aren't hard to make,,,,all you gotta do is
buy one and, well, I have a friend in Texas that perfected this a long, long time ago.

>A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>The final device that I made swept through all >40 channels. That was a little more complex to >make.
>I guess it never occured to him to use his >mobile. Good thing too, or we would have had >to risk attaching another device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>Not to the best of my knowledge. <

Ignorance of the law is no excuse.

>We didn't
>have to trespass to plant the device, the >device was part 15 covered.

If you so much as TOUCHED his car during such an act, a crime was committed.

>There might have been a grey area over the >true intended use,

No gray area.. You freely admitted
you were doing it with an intent to jam, making you in violation of the FCC and what you consider federal law, which makes you a federal criminal (your words).

>but hey, it was better than tieing the coax of >the guy's antenna to a car bumber and driving >away like another local had suggested.

Yea...that works better for antennas.

In all seriousness.....I must admit you certainly have a knack for arguing both sides of the coin.

>Thank you. I do try.....
>Dave
>"Sandbagger"

Yea, but who did ya' think you were foolig? Those "newbies" who are fence sitters?

I am talking about when the dx fades so will the truckers gravitate back down out of those bands......the only reason they are there is because of the lack of traffic there. I am NOT defending or condoning it any way, merely stating why they are there and why they will soon be gone.
****

Nice try Twist, how do you know why they are there? there is not much traffic on 27.415 to 27.999 These guys are talking to trucks in front and back of them DX doesnt interfere with them ask Nebo, how many watts it would take to interfere with these truckers. As Usual another assumption on your part. You need to try and post the facts instead of yuor opinion twist cause they are like assholes, capeesh

Well, now that you mention it, technically they would be legal, same as the Galaxy 10 meter radios are legal for authorized hammies on those freqs. Besides, how long have export radios been entering the country? Much longer than this current cycle and certainly much longer than this new crop of intruders that suddenly appeared on ten this cycle.

I think the truckers will move back down once it's quiet again. Same thing every cycle.
See above

Think? That was your first mistake, what you think doesn't matter you are of no consequence.

>There are some others being market-tested to >see if anyone will buy them. (Shudder)
>Interesting........to say the least.
>Don't
>know about you, but I can see where that is >heading, and we hope to >head it off.

Since it really doesn't concern me one way or the other, I wish you good luck.
****

There is alot that doesnt concern you yet you try to make it your business.

You have every right to expect your bands to be free from non-licensed individuals. The bad apples in the service are another story.
An example can be found in the few angry hammies trying to get heard on the freeband on almost a daily basis.
****

Who are the hammies trying to get heard on freeband? Callsigns?

I think that poor bloke in Kansas
is going to pop a vessel, he's so desperate to be heard, he's taken to ghost talking (yes, he is DEFINITELY a hammie). The anger coming from Oklahoma could be bottled and sold at the Apollo as a hit (also another hammie) and the desert, well, most of them guys been in the sun too long....one thinks he hears things rest of the world can't.....really, Jer..you really are missing the fun :)

Callsigns please or just baseless assumptions with no facts to back them up?

: thats total BS. when the band is open these freqs are full blast and sound
like
: 10 meters does during a contest

Tim, why don't you think before you post, so your saying 27.415 to 27.999 is as busy as 10 meters when the band is open right? i don't see it being that busy in the 27 years i have used radio, after 27.555 there is usually not much activity, why dont they go to 27.555 to 27.999 instead of 10 meters which when the band is open it is full blast, that was your words. why would they go to a band that is as busy as the freeband?

See Tim, If that is the case then twisty excuse is just that an excuse, assumption, opinion etc he say's they are there because of the DX on the normal 40 but your saying 10 meters also becomes full blast so why would they go to a band that is full blast. I will tell you why they use that freq(28.085), because it is normally quiet it is in the CW portion they hear no voices so they think it is open, and because they only have to click the band switch 2 clicks they don't even have to touch channel selector it its that easy for them.
If they didn't have radios that went to those freqs do you still think they would talk there? I highly doubt it, the export radios with all the channels makes it easy to break the law, up 2 clicks is what you always hear. Btw, how noisy can it be for them they are talking to truck directly in front and back of them.

468. Freebanding!!

Newsgroup: rec.radio.cb
Date: 2002-11-05 16:30:08 UTC
From: Late Hit <roughing@greenbay.com>
Message-ID: <Ud6dnefN5cGNb1qgXTWcpQ@comcast.com>
Source record: 142951

Freebanding!!

What is "Freeband, and Freebanding?
The Freeband are frequences and bands NOT intended for public use, and fall between the 12 and 10 meter bands. They are a "no-man's land", yet still illegal for cb'ers, and ham operators. They are the frequencies below channel one (26.965 mHz), as far down as 25 mHz! They also are above channel 40 (27.405 mHz), and up to 27.990 mHz!! Below channel one you go in the direction of government freq's, and above 40, you go just under the ham's 10 meter band. It is here where many cb'ers go to get away from the norm, and the crazy junk found on our cb channels. Even some hams can be found here, usually these our new ham's who just came from cb.

This is a new frontier compared to cb radio, with a new generation of cb radios on the market. These radio's are "imports", and come as 10 meter transceivers out of the box (28 mHz to 29 mHz). They can very easily be converted to operate on a huge frequency spand. The coverage varies from model to model. Most come with a frequency counter display, and channel display, band switch, AM/FM/SSB/CW. Peaked they can push 30 to 40 watts AM! Averaging at least 10 watts AM/FM!! 25 watts PEP SSB!!

Most of the activity falls between 27.4205 mHz to 27.775 mHz, or channels 42 to 77. It is here you will find the very finest dxing and quality modulation that puts cb to shame and rivals ham operation! Just as self governing as ham freqs, operators are much more mature and professional. Many popular clubs exist around the country for this band, despite the fact that it is still very illegal. Perhaps not for long, because the FCC is being pressured to increase the cb frequencies. The last time the FCC increased coverage was 1975, from 23 channels to 40 channels. We may see them increase it to 100 channels, since there are so many "imports" readibly and easily available already! Even if this happens, it will only pollute these "clean" freqs, and soon they will be as junky as the rest of cb, so then we will have to take over another band to get away from the growing mess!

Perhaps then we may cross over in to the 10 meter band (28 mHz to 29 mHz). Currently most freebanders are respecting the ham operators space on the 10 meter band. We don't go there now, even though our radios can! We may be forced to if the FCC increases the cb channels. Up to now, these radio's cost about $100 to $400 MORE than a typical cb radio, this has discouraged a lot of people from crossing in to the freeband. If FCC increases cb's coverage, prices will no doubt come

down, and more people will be on these freqs, which means more bullshit and crap! Let's just hope the FCC doe's NOT increase the coverage! Things are just great now for freebandeers!!

The Freeband is more than just an escape from cb crazies! It is truly a major "crossroad" to becoming a Ham operator. After tasting this kind of radio, many cber's go for their ham license. As I pointed out earlier, some ham operators can be found talking to cber's on the freeband! For them, it is a return to what got them to where they are now! Even if you never become a ham operator, you walk away a richer man!

469. Freebanding; The Last Frontier?

Freebanding; The Last Frontier?
Written by "Smiley" (A.E. #"X" in the February, 1997 issue...
My favorite place in the whole-wide-world is the Freeband! If you're not familiar with this term; then face it, you're not really into radio. Even if this is the case, you may find Freebanding interesting because of its contraversial overtones and its waving a big fat hand in the face of that lovely organization affectionately referred to as "Uncle Charlie".
Let me define Freebanding: In simple terms, Freebanding is operating CB radio equipment above the 40 CB radio channels. Some would argue that the Freeband includes frequencies below the 40 CB channels, however I disagree, and since I am writing this, that is how it will be! The term "Uncle Charlie" is the code name for the FCC. There are many stories on how this came about, but I don't care to get into them right now...
What I am into is the Freeband. I wanted to write this article because I'm sick of reading about the false implications or even allegations, in some cases, that give the higher channels a bad name. Further more, I'M SICK OF SEEING OTHER PUBLICATIONS DANCE AROUND THIS SUBJECT AND NOT TELL IT THE WAY IT REALLY IS!! People operate on this band because of a few basic reasons. I can think of 3 for this article.
First, there is the "idiot" factor. 99 out of 100 people you run into on the Freeband are genuinely interested in the radio as a hobby. There are only occasional exceptions when some drunk idiot gets on the radio and harasses everyone. Most "idiots" can't afford nice radios that can go up on the higher channels. And, since they are "idiots" in the first place, they usually can't figure out how to convert their current stock radios to higher channels anyway!
Next is "sneaky syndrome". I suffer from it... but that's what I like to refer to as the "kid in all of us". Let's face it, it's fun to to do something you're not suppose to do - as long as it doesn't hurt anyone. So sneakiness really translates into fun!
Finally, there is the very word "Free" that brings it all together. There are no power restrictions, no rules to follow, no callsigns to endlessly repeat, and no tests or code requirements. Freedom.
I've been a licensed Ham for years - and so have many of my Freebanding friends, but we always like to come back to the Freeband. Why?
Other than the previousely mentioned things, there is the fact that Ham radio is not for everyone simply because they cannot learn the Morse Code. In this day & age, it is obvious that there is no need for CW. Old timers swear that it must be kept as a requirement because "the Ham bands will go the way of CB".
Well that's a poor excuse if you ask me. Those Outrageous price tags

on Ham gear is the only reason the Ham bands haven't gone the way of CB!
Let's face it. Ham radio has become a "gentlemens' club". Only a handful are able to pass the initiations. Now don't get me wrong, I am not saying that Ham radio is a bad thing - after all I'm a Ham too (N1"XXX"). I am trying to point out that there is an alternative form of radio operation. Some would even say that Freebanders are "Ham-want-to-be's". In a way, that is true because the Freeband is talked-on using Ham lingo such as Q-signs, and yes, even CW.
However, the refreshing difference is that there are no rules. Everyone that makes it onto the Freeband has accomplished something just by being there. By hanging around the Freeband, an operator can learn a lot about radios and proceedures. The simple fact is that everyone is more friendlier because everyone an equal. Equal? Well, perhaps that's a poor choice of wording, but if you think of it as a sense of unity - then it can be used.
Then there is the spirit of the whole idea of "Pirate Radio" - sort of a pioneering spirit if you will. Not many people deviate from the norm' any more. With the world getting smaller from the information boom, more people tend to conform, than tend to express individualism. Being a Freebander can give a certain kind of exhileration comparable to getting into a car and breaking speed limits (except, at no risk to yourself or others).
Sure the FCC could catch you, but the honest truth is that they don't have anywhere near the time or resources to "crack-down" on Freebanders!
Lately, it has become evident that the FCC has admitted its disinterest in enforcing its laws against out-of-band operators. They will however, act on the "idiots" that run thousands of Watts and splash their neighbors. But to be realistic, the FCC may only react by acknowledging the interference by sending the "idiot" a threatening post-card (hey, it only costs $0.20)! In a nutshell, the FCC is only after the people that cause havoc on the airwaves. They're simply not after the average Freebanding fool!
I know that many operators out there still consider Freebanding an evil thing, but all I have to say to them is they need to get their heads out of their... err, I mean out of the sand.
You'd be surprised at how nice the operators really are on those "pirate" frequencies. If you really care about the radio, you should explore all that it has to offer. After all, staying on the straight is narrow... you've gotta travel off the beaten path once in a while...
Did this article upset you? I'd love to hear from you! Just direct your hate mail ATTN: "Smiley". Oh, and happy Freebanding!
...More stories are on the way; be patient!
Sporadic Waves

This is the exact post that had you crying copyright infringement knock your dick off.

From Twistys Column

"Gone Crazy? International DX on the eleven meter and free-band is there for the taking just about everyday on sideband. AM is also giving up rare contacts. But one of the better known frequencies for international DX contacts, 27.555 USB, once a jewel of pleasant listening and international contacts, has unfortunately deteriorated rapidly over the last few months, morphing itself into a vile cesspool, spewing forth all it's bile and waste, due to a small, intellectually-challenged, rapid group of angry, self-loathing and pathetic operators who have taken it upon themselves to take up a permanent-like residential status there, and in the process, completely abdicated any civil, polite conversation."

"This small but nefarious group is attempting to jam, interfere, and prevent any DX contacts from being made on frequency. In case you haven't listened in on 555 as of late, the frequency has literally become a key down fest with language that one would be embarrassed to hear in the company of children, while only those blowing ridiculous amounts of power are being heard."

is
: >as busy as 10 meters when the band is open right?
:
: george, isnt it kinda early in the morning for you to be drunk? i said
: 27.415-27.995 is as busy as ten meters DURING A CONTEST. during a contest
is
: the only time ten is as busy as the freeband. most other times its a ghost
: band. you went off on a rant about something i didnt say. what a dumb ass.
:
: > i don't see it being
: >that busy in the 27 years i have used radio, after 27.555 there is
usually
: >not much activity, why dont they go to 27.555 to 27.999 instead of 10
: >meters which when the band is open it is full blast, that was your words.
:
: so now you claiming to have monitored the freeband over the last 27 years?
why
: would you do that? and again i said ten is full blast only during contest
: times.

Well, the same reason you monitor Ham bands for past 10 years stupid.

Ok, even if you said 10 was open only during a contest what point are you
trying to make?

:
: >why would they go to a band that is as busy as the freeband?
:
: its not nearly as busy as the freeband unless its a contest which isnt
that
: often

Then why did you make that claim what was your point for saying it?

:
: > I highly doubt it, the export radios with all the channels
: >makes it easy to break the law, up 2 clicks is what you always hear.
:
: more comments leading us to believe your really a cb'er in disguise? seem
slike
: you listen alot lol

Tim, I do listen to the CB did I never said I didn't ? I have 5 radios on 24-7, from uhf-vhf to HF to Cb I also live on the east coast the busiest corridor of truck traffic in the USA, try 95North or NJ turnpike going into NYC

:
: > Btw,
: >how noisy can it be for them they are talking to truck directly in front and
: >back of them.
: >
:
: very noisy between key ups

aw poor babys, never heard of Squelch? rf gain? nah they can only turn the band switch LOL
Tim you are to easy your a boy playing amongst men.

: go eat something, you cant hold your liquor

I hold your liquor by the ears

>Ok, even if you said 10 was open only during a contest what point are you
>trying to make?

i didnt say it was only open during contest times. i said is was only heavily used during contest times and the point was if it wasnt so quiet and silent there perhaps the truckers would know that it was a ham band but since they tune around up there and hear mostly nothing they think its free space. use it or lose it.

>Then why did you make that claim what was your point for saying it?
>

see above

>Tim, I do listen to the CB did I never said I didn't ? I have 5 radios on

Dan,
your assertion that most cd'ers are unemployed smacks of gross ignorance.

I wonder just how many of them are working at the time while gabbing on
their CB's. Having been a cb radio operator myself before I became a ham,
I can tell you that a very large number are employed and drive around
town/across country and talk on the radio as a means of passing the time,
gaining information on local traffic conditions, etc.

Where do you get off implying that most cb'ers are unemployed?

I guess its another case of shooting off at the mouth before placing
brain in gear, eh?

Gee dan,
what makes you such a "super ham" that you have to tell me this?
Raising a little heat and discontent?

No, I originally got into ham radio for a lot more than public service events. Most of my friends moved there (and sadly, most of them are now dead). Hell, I am still a young pup by comparison to those old timers (elmers I believe they care called) and I have great respect for them. You, sir, don't rate that respect (as your posting history here and your on-the-air antics would would suggest you aren't worthy).

Before you go casting stones, dude, you'd better make sure your house isn't made of glass first (and yours appears to be quite glassy atm).

in any case, I'll take your comment with a grain of salt (A 200 pound grain that is).

I have the ability and the right to be free of their harassment and to
make them conform to
their TOS concerning such actions. If they obeyed rules and didn't
proudly violate and flaunt their
violaions (such as yourself), they wouldn't have antything to complain
about concerning such things.

>Twit, I think they have the ability and the right >to make you conform
to FCC rules,

That is an absurd statement.
If you clowns had any ability at all concerning me, do you think
you/they would not have attempted to exercise it? Oh, excuse me, ya''ll
did...hence the term "impotent" applying to you morons.

>just as you think you have a "right".

It isn't a right....it's the rules set forth by ISP's and governed by
FCC law. Your double standard is interesting only to the extent of the
limited and select field of vision you choose to employ.

>If the keyclowns didn't flaunt and violate the >FCC Laws, the anti's
wouldn't have anything >to complain about.

Who gives a damn what they complain about? They're i-m-p-o-t-e-n-t.

>You have cared enough to respond to leland >and the rest of the Aaron
posse for how many >years now?

Dunno how many years, but I do respond each time my chosen handle is
addressed.....oh yea,,,,and when malicious fallacies are put forth
concerning myself or another, or when a lie is attempted concerning
cb....these are what the poor guy referred to as a
"crusade."...hardly,,it;s merely pointing out the bullshit, nothing
more, nothing less.

>You also respond when your name is not >mentioned enough with the lies
twist.

It is called "input".
You were referring to Lelnad, try not to change the subject and merge
two separate subjects. The context of one discussion does not merit the
same context when taken and held or applied to a different
application.....which merits the question, that was just again so

magnificently displayed by yourself, why is that some of those who are supposedly licensed for communication, suffer such a great deficit in same?

On a note of truth, Lelnad KC8LDO didn't post under his real identity for a few days (he was busy shilling).....when he started doing so again, he invoked my spirit, chanting my name in his post to another that had nothing to do with myself whatsoever. Being the polite guy I am, I gave him what he was seeking, temporary validation from me. Claims are more valid when they are true,

>Truth, you and that word are far removed from >each other and I have yet to see much truth >come from your keyboard, just assumption >and innuendos.

Tut tut....you can attack the person only when you can't attack their claims...true to form.

>Claims are more valid when they are true? >

Yes. You ought to try it some time and see how many friends you can make.

>you better either change your claims or refrain >from giving them.

Too vague. Be specific or not at all.

thats total BS. when the band is open these freqs are full blast and
sound like 10 meters does during a contest

>Tim, why don't you think before you post, so >your saying 27.415 to
27.999 is as busy as 10 >meters when the band is open right?

The freeband is WAY busier.

>i don't see it being that busy<

Well, there it is again,,,that must end it...hahahahhahahahaahah!

>in the 27 years i have used radio,<

So now the TIME you put in suddenly means something? And you haven't
managed to upgrade? I wouldn't splatter that all over usenet, of corse
that's why you change nics so dramatically, to avoid at least some of
the ridiculous garbage you spew from being attributed you...classic of
one unable to back anything they ever say.

> after 27.555 there is usually not much >activity, why dont they go to
27.555 to 27.999 >instead of 10 meters which when the band is >open it
is full blast, that was your words. why >would they go to a band that is
as busy as the >freeband?
>See Tim, If that is the case then twisty excuse >is just that an
excuse, assumption, opinion etc >he say's they are there because of the
DX on >the normal 40 but your saying 10 meters also >becomes full blast
so why would they go to a >band that is full blast.

Of course "twisty" gave his mere opinion. If it's a fact I claim and I
get called on it and feel the inquirer is worthy, I may or may not
choose to support my claim. If we are to consider the posse named by
"Arron", any of them asking for anything deserves nothing unless we
decide it merits such,,,,,,,,,,,like a reply, let alone support to a
claim.
No matter what "full blast" means to anyone, 10 meter is not as busy as
11 (reg 40).

>I will tell you why they use that freq(28.085), >because it is normally
quiet it is in the CW >portion

Gee, as opposed to exactly what?.....say...11 meter?

>they hear no voices so they think it is open, >and because they only
have to click the band >switch 2 clicks they don't even have to touch

>channel selector it its that easy for them.
>If they didn't have radios that went to those >freqs do you still think they would talk there?

You are becoming quite philosophical..let's look at that again shall we? You asked...."If they didn't have radios that went to those freqs do you think they would talk there? Hmmmmmm!

>I highly doubt it,<

Did you hurt yourself arriving at that conclusion?

>the export radios with all the channels makes >it easy to break the law, up 2 clicks is what >you always hear. Btw, how noisy can it be for >them they are talking to truck directly in front >and back of them.

This is the exact post that had you crying copyright infringement knock your dick off.
From Twistys Column
"Gone Crazy? International DX on the eleven meter and free-band is there for the taking just about everyday on sideband. AM is also giving up rare contacts. But one of the better known frequencies for international DX contacts, 27.555 USB, once a jewel of pleasant listening and international contacts, has unfortunately deteriorated rapidly over the last few months, morphing itself into a vile cesspool, spewing forth all it's bile and waste, due to a small, intellectually-challenged, rapid group of angry, self-loathing and pathetic operators who have taken it upon themselves to take up a permanent-like residential status there, and in the process, completely abdicated any civil, polite conversation."
"This small but nefarious group is attempting to jam, interfere, and prevent any DX contacts from being made on frequency. In case you haven't listened in on 555 as of late, the frequency has literally become a key down fest with language that one would be embarrassed to hear in the company of children, while only those blowing ridiculous amounts of power are being heard."
==========
Nice, but no cigar. That isn't a forge nor what got you slapped.

>While it was clearly an effort to block >someone's receive,

Makes it illegal....end of story.

>>What do you care of Radio illegalities?<<

Depends on the legalities. Here I mention it only to illustrate Dave
Hall's hypocrisy of calling me a federal criminal for freebanding and
dxing over the years when he clearly went way beyond the realm of
breaking FCC law than I ever had.

>The fact that the only person who would have >heard it, was also guity
>of breaking far more serious FCC rules, >made his complaints unlikely.

Hahaha....no way, dude. Two wrongs do NO make a right.

>>Correct ignorance and stupidity are not >>excuses,

Tell it to Dave, it was HIS excuse.

>sorta like you on the freeband you have no >rights.

And you are angry over your impotence of the situation.

Poor cber? Appears you were/are one of those "poor cbers"...even as far
as being a dealer/repair shop that has provided illegal services in
srtcit violation of FCC rules.

>>Twist I will ask again, what do you care about >>FCC rules being
broke, you break them all >>the time. Or the ones you break not as
>>important as others?

And I will tell you again......I illustrated them only to prove the
hypocrisy of someone who has been on the unprovoked offensive attack
against me for freebanding and dxing, for calling me and others
"fedeeral criminals" when he is no better...as a matter of fact, it
makes him worse....a hypocrite hammie.

>And believe me, I saw my share of "clip and >peak jobs, gone horribly
>wrong", in my day. I spent most of my time, >making borderline unstable
radios like >Galaxy's, who had already seen the >screwdriver, operate
with some stability and >cleanliness. It took a while to undo the "CB
>myths" that most of the locals bought into, but >after hearing what a
properly set up radio >could sound like, they finally started to see
>things my way, and I had a ton of business as >a result.

>But that was about 5 or 6 years ago now.

Riiiiiiight! And you suddenly saw the light and everyone else who happens to partake in what you did is now a federal criminal (your words). So I guess you speak from experience as a self-admitted federal criminal?

>>Twist it is better to see the light and admit >>that he was wrong

He admitted nothing. He was caught.

>> than to continue to lie<<

He has done just that.

>>and make excuses for your actions<<

And he has done that too, by saying it was a long time ago. First he said it was when he was a kid, but his posts, as usual, show he was a "federal criminal" as recently as a few years ago.

>>and try to non trivialize FCC laws as un >>important.

Yea, he did that too with his attempted defense of his jamming techniques. He ran right to another, pointing out his (the jammee) violation was much worse and somehow merited Dave to break the law.

>Believe me, I know what you're trying to do,<

You do? I thought I was trying to take you up on your offer of asking him, but several reasons why that would not be possible and the fact that he couldn't lend credibility by verifying your story came up when I actually tried to do what you suggested.
S'ok.
It would have been much easier on you to admit you are a hypocrite instead of denying and lying about it over the past how many months.
Hey, the law is the law, remember? You are a sociopath (your words) if you deviate or make allowances, such as selectively ignoring laws certain laws, like dx or going above the posted limit in the desert.
What's good for the goose.......
So it was also a conspiracy to break the law.

>>Yes same as you Dxing, freebanding with >>another individual, premediatated as well >>since you know right well your breaking the >>Law.

So now MY actions justify a hammie breaking the law? Hahahhahhahhahaah!
Yea.....

>If that's what you want to call it.<

Look it up......I call a spade a spade.
Remote car control, huh? Those aren't hard to make,,,,all you gotta do is
buy one and, well, I have a friend in Texas that perfected this a long,

long time ago.

>A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>>Sounds like you have also jammed someone >>huh Twist can you say Hypocrite....

Hahahah....as always, because we talk about it, we must be guilty. Better stay out of some of the alt. groups....you're heart couldn't take it...hahahahhaha

>The final device that I made swept through all >40 channels. That was a >little more complex to >make.
>I guess it never occured to him to use his >mobile. Good thing too, or >we would have had to risk attaching another >device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>>Sounds like you!<<

Dx and freebanding. But the fact you feel it justifies you breaking other laws is common among lawless sociopaths.

>Not to the best of my knowledge. <

Ignorance of the law is no excuse.

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.......you keep asking for excuses....

>We didn't
>have to trespass to plant the device, the >device was part 15 covered.

If you so much as TOUCHED his car during such an act, a crime was committed.

>>Cite it?<<

Criminal mischief.
No go clean off.

>There might have been a grey area over the >true intended use,

No gray area.. You freely admitted
you were doing it with an intent to jam, making you in violation of the FCC and what you consider federal law, which makes you a federal criminal (your words).

>>See you guys are more alike than you think >>twisty.

I always knew he what Dave was about. The fact that he tried to act otherwise with a call sign was his mistake.

Actually, they are allocated to various services and organizations.
Hardly a "no man's land".

Most states have highway patrol allocations in there, forest service,
there's quite a long list.

yeti@cet.com wrote: few postive things in his rants...

:>You like your books, don't cha' frankie....

: Sure do. They are a great wealth of information. Books have been the
: primary means of recording information since the days of stone tablets
: and sheepskins. You might try reading one sometime.

I do thanks... you probably have some books in stone... that's where some
of your technology seems to be sourced. In specific, the rectifier
equalization networks you recomend and amplifier to radio ALC. Both
types of circuits are very dated technology.

:> somehow you left out if
:>that's input power maybe your'a quoting there and who's data sheet
:>you looked up. You know Svetlana has a way of fudging up some data
:>sheets
:>a bit.

: Sorry to disappoint you, but the information is from Eimac. And you
: know what's really funny, Skippy? I didn't even look in a book for
: that info -- it came right from their website! So much for your
: sarcastic little comment about how I like my books! LOL!!!

You still didn't say if the posted power level was the input or output
value..? We're waiting...

:>A single 4cx250b in linear service delivers about 325 watts carrier,
:>AB1 with about 5 watts of drive. It requires neutralization, regulated
:>screen voltage and much higher anode supply potentials and all the
:>required extra hardware which runs into some nice pocket change. I've
:>built more than my share of amplifires using the tube...

: I doubt it. For starters, AB1 requires NO drive power regardless of
: what kind of tube you use. The input circuit may be built to load 5
: watts while transforming the signal to a voltage level appropriate for
: the tube, but you can 'drive' it to full power with 5 MILLIwatts if
: you want. Once again you demonstrate your ignorance of basic RF
: theory. Maybe it's because you don't like books...

I should have provided one more line to the text. The above example is
based on "an actual working circuit". Sure AB1 in theory requires no
drive power... the circuits I've actually built target loading 5 watt
exciters (radios).

We should be talking practical circuits here... Few common radios output
5 milliwatts. Taming your dream +47dB amplifier is not realistic, nor has

it been done in any real world amount that I've seen actual examples of.

I can actually get the circuit example I provide above to operate with little or for the most part, no neutralization. A real technical task for this type of near 17dB amplifier.

You obviously haven't built many amplifiers using the 4cx250b, I have. The real word drive levels I indicate allow one to use many of the 2-10 watt HF radios built through the years. You only seem to read and quote from text books and on line data sheets.

:>The 4cx250 tube also has much more serious potential vhf parasitic
:>problems.
:>Building rf amp with it is not for first time builders.

: Where did you get THAT pile of meadow-muffins? It doesn't have
: parasitic problems any more serious than any other tube, even sweep
: tubes! Do you even know what causes parasitic oscillations? They
: aren't caused by the type of tube, dimwit! They are caused by resonant
: conditions of the circuit surrounding the tube. To prevent parasitics,
: all you need is a parasitic choke on the plate and/or the grid.

Not entirely true... Had you any true breadth of broadcast experience... you might have seen some really high powered broadcast transmitters with additional parasitic supression circuits included. Plate and/or grid parasitics chokes are not the "all" cure for every case.

Now to the actual issue...
The common sweep tube has very poor gain at and above mid, to high vhf frequencies. Resonant VHF paths in the Sweep tube amplifier box are not really a large red flag; where-as they must be considered with each application of the 4cx250b.

Some amateur rf amplifiers with reported histories of problematic vhf parasitics, they actually pulled from the market...

: Your scare tactics aren't working, Skippy. And scare tactics don't
: work on the voltage issue, either -- a capacitor bank full of 900
: volts will kill you just as dead as one topped off at 2000 volts!

Actually not exactly right... above and below certain potentials, one might be blown back or compelled to hold on during accidental contact. But that's another topic.

Some of the major issues to be considered when building higher/lower Ep amplifiers are the additional hv spacing requirements for the chassis and the higher breakdown requirements of the hardware. Higher voltage supplies, their technical requirements and the additional parts cost a lot more money...

: If you want a low-cost simple-to-build amplifier you should try the
: venerable 6146 or 807 (basically the same tube). That's one tube that
: you have to try really hard to make it NOT work. My suggestion for
: first-timers would be to learn the basics with a 6V6 or 6L6, then work

: your way up from there.

The 6146b is a nice tube, builders just have to always concern themselves with the VHF operation of the tube. The 807 is nice, but in my experience a real pain in the pazoo to get practical power gain near 28Mhz. I really like both the 6L6 and the 6V6 but I avoid them in preference to tubes with top mounted anode connections. Stable high gain rf power operation of an all base pin connected tube is not so easy. I actually fixed a 6L6gc tubed guitar amp about two years ago with a wandering ~3 Mhz oscillation... very funny. After the repair, the owner still couldnt play guitar worth a darn... had to show him how to play a simple blues pattern.

:>> Through Eimac's official distributer (Richardson) they only
:>> cost $180, which makes them cheaper than a half-dozen 6LF6's. But if
:
:>I don't deal with Richardsons, they have a history of price fixing
:>and bad business practices. Convicted of something along those lines
:>some
:>years back.

: Well, their prices are certainly akin to highway robbery, since you
: can get the 4CX250B from Bruckner for $110.

Along with the required special socket, chimney and adequate cfm blower...

:> I don't buy 6LF6's new anymore... I can and do buy
:>current production Russian label EL-519 equivalents which are actually
:>better than the Svetlana brand.

: I don't buy sweep tubes so I really don't care. Matter of fact, I have

The fact is, they are once again low cost and easy to get.

:>> you want one REALLY cheap you can pick up a National for $43 from
:>> Bruckner, which is WAY less expensive than six of your $20 sweep
:>> tubes. BTW, where CAN you get brand new sweep tubes for $20? I looked
:>> under several tube distributors and the prices seem closer to $30 per
:>> tube. Do you get them wholesale or something?
:>
:>Your National tubes are probably chinese made, which I really don' like
:>all that much. Past quality control issues turn me off big time.

: Ok, if you are going to pick through the candy dish, here's Bruckner's
: list. Take your pick:

: 4CX250B M EIMAC $ 110.00
: 4CX250B M AMPEREX $ 90.00
: 4CX250B M RCA,GE $ 85.00
: 4CX250B M WESTGHS,SYL $ 80.00
: 4CX250B M NATIONAL $ 43.00
: 4CX250B M RCA-CHINA $ 43.00
: 4CX250B M STAR $ 65.00

Add the required special socket, chimney and an adequate cfm blower
along with the higher voltage anode screen and control grid power supply
requirements to the list... Not nearly as simple to build, not nearly as
cheap to make. All the lower cost tubes in your list are probably from
asian sources. A few might be russian...

: BTW, Star makes a pretty good tube. But the point is that, watt for
: watt, sweep tubes aren't that much cheaper than RF tubes anymore, even
: with the hardware (which will add $20 to $100 to an amp, depending on
: where you get the stuff).

You didn't quote the prices for the additional hardware I list just
above... even resourceful people will have a problem keeping new hardware
costs below your pretty low ball $100 amount.

:>I get brand new sweep tubes direct from Eastern Europe... you buy
:>retail or
:>from tube distributors. I buy direct and get the best prices. Wanna
:>build a sweep tube Amateur Amplifier..? You can do it AB1 or AB2...
:>I don't mind...

: No thanks. If I want to build an amp I'll do it the right way.

But as indicated in your posts, you don't appear to have any real world
experience building amplifiers. Have you actually built any amplifier
from scratch you can talk about..?

: But somehow I knew that your bias in favor of sweep tubes was
: financially oriented. Because it certainly wasn't based on sound RF

Where do you see me indicate bias in favor of..? Comparing the issues and
requirements of the two amplifiers; your example 4cx250b and a sweep tube
chassis do not indicate a bias. The merits and short commings of any and
all amplifiers are fun to talk about. Let's dance frankie... I'll lead,
you follow.

: engineering principles. Ain't it funny tho: sweep tube amps used to be
: popular because they were so cheap, a decision based on saving money.

... and they work pretty well for what they are.

: And now there are people like you that encourage the use of these
: splatterboxes because spreading ignorance can put a few bucks in your

"splatter boxes" as described from a guy who has probably never properly
scratch/home built or operated more than one. Hate to rain on your
parade frankie... but you provide no actual data of an operating amateur
amplifier (which should be updated as directed in my dentron GLA text) to
back your spectral/linearity claims.
I monitor and watch my spectral content or linearity almost every
transmission. None of my amplifiers splatter, even the sweep tube
versions. I'm darn loud on the bands I frequent..

: pocket. You are a true sham artist, Skippy. Good thing that people
: like me are around to keep innocent folk from getting taken by people

: like you.

I'm not in the regular amp business frankie... sorry but your once again wrong. I tried to tell you that 2 or 3 times already.

The only good thing from your book theory babble so far is that readers to these threads will eventually see everything sorted out (through our posts) as applied to the real world and hopefully learn something.

You are a stuffy wanna be a small rf amplifier "expert" (drip under pressure), who appears to us, to have little actual real world experience building amp circuits from scratch. Per you, everything is in stone and no other options are possible or practical. Maybe you really do need some french roast to break up your mental gel cells.

Stay with your book-only theory and keep your head in the sand. Over time, some of the once gospel rf amplifier book theory is revised and the bad information hopefully discarded. But old bad habits die hard... like your rectifier equalization networks and grids tied to the plate in rf amplifiers.

Hope your broadcast station is solid-state frankie...

By the way, you can still hear one of my past projects on 1640 most every night. Try listening to (now) kdia 1640 Vallejo, CA. I placed the first legal expanded band AM station transmitter on the air west of New Jersey as 1640, then callsign KXBT. Had a nice Sweep Tube.... &%$##@A... a'ha got'cha for a moment... "big tube" transmitter honking out a big signal.

Still waiting for any web pages, reference articles or projects you might care to share with us Frank. You've been pretty quiet about any real world experience and you seem to think you're the only one on this news group working in or around broadcast stations. Once again, not so...

Out with it frankie... "who's your daddy..?"

cheers
skipp

>Twit, I think they have the ability and the right >to make you conform
to FCC rules,

That is an absurd statement.
****
Yes it sure was, but I am getting used to them buy you.

If you clowns had any ability at all concerning me, do you think
you/they would not have attempted to exercise it?
****
Probably because you chose to remain an anonymous acolyte

>just as you think you have a "right".

It isn't a right....it's the rules set forth by ISP's and governed by
FCC law.
****

You said it was a right Twisty, I know you can;'t contain your lies.Fcc Laws
hmm the same ones you
thumb your nose at all of a sudden they are important to you? LOL Can you
say Hypocrite!

Your double standard is interesting only to the extent of the
limited and select field of vision you choose to employ.
****
Twitsie, as noted you are the one implying the double standard not the
above!

>If the keyclowns didn't flaunt and violate the >FCC Laws, the anti's
wouldn't have anything >to complain about.

Who gives a damn what they complain about?
****

You do, hence your compaints to ISP's and your outright opposition to their
legal stance

They're i-m-p-o-t-e-n-t.
****
been on your hands and knees lately huh

>You also respond when your name is not >mentioned enough with the lies
twist.

It is called "input".
****
With you it's called Bullshit

You were referring to Lelnad,
****
You share the infatuation with him don't try to make people think others share in it. not in any of these posts directed towards you do I mention him, he has a hold on you I can see. Another lie, misconception on your part try again!

On a note of truth, Lelnad KC8LDO didn't post under his real identity for a few days (he was busy shilling)....
****
Hmm there goes that name again, did that upset you he did that?

>you better either change your claims or refrain from giving them.

Too vague. Be specific or not at all.

That means the bullshit you are spewing is just that try telling the truth or try to put less of a spin on things to accomodate your agenda.

>Tim, why don't you think before you post, so >your saying 27.415 to
27.999 is as busy as 10 >meters when the band is open right?

The freeband is WAY busier.

Over all i must say it is, above 27.555 though is less used by far, swr
concerns etc may be one reason As noted I was trying to ellicit Tim for the
answer.

>i don't see it being that busy

Well, there it is again,,,that must end it...hahahahhahahahaahah!
****
No that's just my opinion just like you have your and never use facts to
back them up

>in the 27 years i have used radio,

So now the TIME you put in suddenly means something?
****
It sure does, after all he tried to impres me with his 10 years of radio
experiance i figure I woul;d let him know I was doing this while he was a
twinkle in daddys eye and I was talking to tim if i am not mistaken why did
you decide to interject? You said you only reply when your name is posted. I
didn't see it mentioned anywhere in this post. Another Lie by Twistedhed

And you haven't managed to upgrade?
****
Well, there it is again,,,that must end it...hahahahhahahahaahah! Is that
your opinion or fact twist, nah we know if it comes from you it is a lie

I wouldn't splatter that all over usenet, of corse
that's why you change nics so dramatically, to avoid at least some of
the ridiculous garbage you spew from being attributed you...classic of
one unable to back anything they ever say.
****
Nah sorry twist another lie, I can do just like Mopar does X-No archive
real simple stupid

>See Tim, If that is the case then twisty excuse >is just that an
excuse, assumption, opinion etc >he say's they are there because of the
DX on >the normal 40 but your saying 10 meters also >becomes full blast
so why would they go to a >band that is full blast.

If we are to consider the posse named by
"Arron", any of them asking for anything deserves nothing unless we
decide it merits such,
****
Who deemed you worthy to decide anything for anyone .

No matter what "full blast" means to anyone, 10 meter is not as busy as
11 (reg 40).
****
Who said it was?

>I will tell you why they use that freq(28.085), >because it is normally
quiet it is in the CW >portion

Gee, as opposed to exactly what?.....say...11 meter?
****
As opposed to 28.350 or any other 10 meter freq that allows voice privleges.
Wonder why they don't hear anyone there huh stupid because there is no voice
comms allowed there thats why they stick out like sore thumbs. get Down the
street twsisty

>they hear no voices so they think it is open, >and because they only
have to click the band >switch 2 clicks they don't even have to touch
>channel selector it its that easy for them.
>If they didn't have radios that went to those >freqs do you still think
they would talk there?

You are becoming quite philosophical..let's look at that again shall we?
You asked...."If they didn't have radios that went to those freqs do you
think they would talk there? Hmmmmmm!

>I highly doubt it,<

Did you hurt yourself arriving at that conclusion?

>the export radios with all the channels makes >it easy to break the
law, up 2 clicks is what >you always hear. Btw, how noisy can it be for
>them they are talking to truck directly in front >and back of them.

>While it was clearly an effort to block >someone's receive,

Makes it illegal....end of story.

>>What do you care of Radio illegalities?

Depends on the legalities. Here I mention it only to illustrate Dave
Hall's hypocrisy of calling me a federal criminal for freebanding and
dxing over the years when he clearly went way beyond the realm of
breaking FCC law than I ever had.
****
Oh ok selective hypocrisy. him making a low power jammer is not way beyond
any realm you have done you jam others communications when you are shooting
DX

>sorta like you on the freeband you have no >rights.

And you are angry over your impotence of the situation.
****
what that you have no rights.

>>Twist I will ask again, what do you care about >>FCC rules being
broke, you break them all >>the time. Or the ones you break not as
>>important as others?

And I will tell you again......I illustrated them only to prove the
hypocrisy of someone who has been on the unprovoked offensive attack
against me for freebanding and dxing, for calling me and others
"fedeeral criminals" when he is no better...as a matter of fact, it
makes him worse....a hypocrite hammie.
****
Well at the time he did this he said he was a Cber so well have to let your
group claim him there. He did it under the guise of Cbers, not hams. LOL

He admitted nothing. He was caught.
****
Really how so seems like he spilled the beans on himself he told you exactly
what he did how may i ask was he caught?

And he has done that too, by saying it was a long time ago. First he
said it was when he was a kid, but his posts, as usual, show he was a
"federal criminal" as recently as a few years ago.

****
I saw first it was 20 years then something about 6years ago

>>and try to non trivialize FCC laws as un >>important.

Yea, he did that too with his attempted defense of his jamming techniques. He ran right to another, pointing out his (the jammee) violation was much worse and somehow merited Dave to break the law.
****
So your saying Dave is no worse than you an admitted federal Lawbreaker

>>Yes same as you Dxing, freebanding with >>another individual, premediatated as well >>since you know right well your breaking the >>Law.

So now MY actions justify a hammie breaking the law? Hahahhahhahhahaah! Yea.....
****
No I am saying your no better than him yet you want to chastize him. Was he a ham back then Do you know? why not ask instead of assume, ooops I forgot your agenda

Hahahah....as always, because we talk about it, we must be guilty. Better stay out of some of the alt. groups....you're heart couldn't take it...hahahahhaha
****
Yes, you hold the hammies in this group to that why wouldnt you hold yourself to the same light?
If you are talking about it than either you did it or are a liar which do you prefer to be called?

>The final device that I made swept through all >40 channels. That was a >little more complex to >make.
>I guess it never occured to him to use his >mobile. Good thing too, or >we would have had to risk attaching another >device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>>Sounds like you!<<

Dx and freebanding. But the fact you feel it justifies you breaking other laws is common among lawless sociopaths.

>Not to the best of my knowledge. <

Ignorance of the law is no excuse.

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.......you keep asking for excuses....

>We didn't
>have to trespass to plant the device, the >device was part 15 covered.

If you so much as TOUCHED his car during such an act, a crime was
committed.

>>Cite it?<<

Criminal mischief.
No go clean off.

>There might have been a grey area over the >true intended use,

No gray area.. You freely admitted
you were doing it with an intent to jam, making you in violation of the
FCC and what you consider federal law, which makes you a federal
criminal (your words).

>>See you guys are more alike than you think >>twisty.

I always knew he what Dave was about. The fact that he tried to act
otherwise with a call sign was his mistake.
****
Your right take a look at Jay and Toll free guys who have ham license but
are admitted Illegal Cbers to the end. Are they hams when convienant or
just when it fits your agenda?
Remember the ham license is no badge of morality it doesn't make you all of
a sudden a good citizen you either are or not

Youy obviously never read the passage of part 15 which covers low power walkie talkies, or remote control transmitters. While I freely admit, we used it to plug someone's ears, if push came to shove, you couldn't prove it was anything more than a propagation beacon.

>
> >The fact that the only person who would have >heard it, was also guity

> that you claim don't exist.

And I still claim that. I use ONE ISP, for all of my internet needs. In the last month or so, they've changed the news server over to a different machine. I don't know how that reflects in the message headers, but I use it the same as I always did. I can't be responsible for the hardware changes that my ISP does.

And I still don't understand the meaning of the term "slurp"......

>
> See, besides trying to take your advice

> >the repair work.
>
> You claimed it yours back then. Another contradiction.

I NEVER claimed that the business was mine. It wasn't much of a
"business" anyway. We only worked the local crowd. I never made enough
money to call it a primary job. It was my "radio slush fund", that I
used to buy more of my own gear.
Hell, I've been repairing radios since I was 15. I paid my first car's
insurance and kept the gas tank full from the proceeds of my ventures.

> keeping on....!

The difference was that I was at least attempting to correct some really
BAD advice and modification work, whichresulted in a cleaner radio
signal. This had the net effect of reducing interference potential. You,
on the otherhand, operate either oblivious of, or indifferent to, the
potential interference that you may create, while chasing your DX.

Message-ID: <usgd8kfo2f5n10@corp.supernews.com>
Source record: 142988

You see Twisted, I don't need to post under different names. I haven't been added to blacklists, so why would I need to? Furthermore my headers aren't faked, they are what my ISP uses and have been the same since July of this year when I MOVED. Before that they had been the same up until excite.com went bankrupt at which point they were the same through them for 1 year prior to that. A search on google would show that. Also I have never had a qwest account and all my friends are in agreement with me that qwest is evil incarnate and refuse ever to give them our business. Your info is obviously derived from your own inept cognitive abilities and you have come to the wrong conclusion and need to leave it to the professionals.
So to be an ignorant fool would be putting it lightly in your case as you are having a side of your own foot as you read this. I have not "got away" with anything since I have not tried anything. - DUH!
Just because someone defends themselves, to an obvious mental midget, aggressively does not make them a guilty SOB! If you are going to make accusations while you sit there in front of your TV then please post the headers to these offending messages so can see and judge for themselves. Unfortunately you cannot do that since there is no evidence that says it was me in the first place. You are just mad because I foiled your attempt to blame me in the past for the same thing:

NON-trivialize? That would mean...never mind!

Yea, he did that too with his attempted defense of his jamming techniques. He ran right to another, pointing out his (the jammee) violation was much worse and somehow merited Dave to break the law.
****
>>So your saying Dave is no worse than you an >>admitted federal Lawbreaker

I am saying Dave is no better than those he called names and accused of being federal criminals. Why is it that some (such as yourself) of those that profess to be licensed in communications, exhibit such a deficit when it comes to employing such?

>>Yes same as you Dxing, freebanding with >>another individual, >>premediatated as well since you know right >>well your breaking the >>Law.

So now MY actions justify a hammie breaking the law? Hahahhahhahhahaah! Yea.....
****
>>No I am saying your no better than him<<

Well, that's good, as it's the first amount of truth I have ever seen from you. I have never claimed I was better than anyone on this forum..that is reserved for a few pathetic angry nocodes, and of course, parasites such as yourself. It is the reason for y'alls sparkling popularity.

>>yet you want to chastize him.<<

Return fire, nothing more.

>> Was he a ham back then Do you know? why >>not ask instead of assume, ooops I forgot >>your agenda

The fact he is a hammie makes a difference? Then hammies should be held more accountable for their actions, by your Lelnad logic.....HAHhahhhahaahhahahahhahahahhhaahhahaah
Hahahah....as always, because we talk about it, we must be guilty.
Better stay out of some of the alt. groups....you're heart couldn't take it...hahahahhaha
****
>>Yes, you hold the hammies in this group to >>that why wouldnt you hold yourself to the >>same light?

Don't start lying just because you buried yourself again.
I have never accused a hammie of freebanding merely because they may have chosen to speak of it.

>>If you are talking about it than either you did >>it or are a liar which do you prefer to be >>called?

Your inability to even comprehend why that statement is so far removed from reality is plenty entertainment for me.

>The final device that I made swept through all >40 channels. That was a little more complex to >make.
>I guess it never occured to him to use his >mobile. Good thing too, or we would have had >to risk attaching another device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>>Sounds like you!<<

You, too. Dx and freebanding. But the fact you feel it justifies you breaking other laws is common among lawless sociopaths.

>>Not to the best of my knowledge. < <

Ignorance of the law is no excuse.

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.......you keep asking for excuses....

>We didn't
>have to trespass to plant the device, the >device was part 15 covered.

If you so much as TOUCHED his car during such an act, a crime was committed.

>>Cite it?<<

Criminal mischief.
No go clean off.

>There might have been a grey area over the >true intended use,

No gray area.. You freely admitted
you were doing it with an intent to jam, making you in violation of the FCC and what you consider federal law, which makes you a federal criminal (your words).

>>See you guys are more alike than you think >>twisty.

I always knew what Dave was about. The fact that he tried to act otherwise with a call sign was his mistake.
****
>>Your right<<

Of course I'm right. He should have acted like an adult instead of losing his temper and acting the way he did. The mere fact that he has held several otherwise legal cbers as federal criminals when his actions were far worse than mere dx or freebanding is another stain on hammie radio....that "I'm so much better than you" attitude that seems prevalent among nocodes among us always comes back to bite them in the azz....every single one of them.

>>take a look at Jay and Toll free guys who >>have ham license but are admitted Illegal >>Cbers to the end.

First of all, in the years I have been here,
neither have I seen claim anything concerning their hammie license, so it doesn't really apply or matter except to thugs like yourself.
Secondly, both have constructively assisted those in need, and I have witnessed on more than occasion of Toll cleaning the clock of those that came in here spouting off something they read in a book with a chip on their shoulder.

>>Are they hams when convienant or just when >>it fits your agenda?

Ask them. Again, in almost 4 years I have seen neither say anything concerning hammies.

>>Remember the ham license is no badge of >>morality it doesn't make you all of a sudden a >>good citizen you either are or not

Yea, well, it has the power of really twisting the psyche of some....hahaahhahahh!

Since when has the CW not been required. If you want General Class or Higher
you still need to take the code test. Also if you are going for the Tech
class you have the option of no code or code. If you take the code you can
use the HF frequencies. If not you can't use the HF frequencies.
Just my opinion.

The Antron 99 is a 1/2-wave antenna while the IMAX-2000 is an End Fed Zepp.
(Actually slightly better than a 5/8-wave.) The IMAX-2000 is also reportedly
a better constructed antenna. Yes, buy the IMAX-2000 over the Antron 99.
BTW, I've owned them both. Best of luck to you. :-)

>admit, we used it to plug someone's ears, if >push came to shove, you
couldn't prove it was >anything more than a propagation beacon.

The law doesn't have to prove anything when a confession is given of
ones own free will, unabetted.

>The fact that the only person who would have >heard it, was also guity
>of breaking far more serious FCC rules, made >his complaints unlikely.

Hahaha....no way, dude. Two wrongs do NOT make a right.

>I see that little exerpt of mine that I sent you in >E-mail have given
>you some more ammo. Bravo!

Were you drunk when you sent it? You never mentioned anything concerning
your status as an illegal OR a dealer.

>No, but I gave you the headers of the account >that I used then. It's a
simple matter for you to >fondle google for the rest.
.

The rest? Oh you mean the rest of your self-contradictions? Hell Dave, I
don't need to do as much,,,you serve up nicely.

that was sent to me by an upperclassmen who is familiar with your
hypocrisy. There are several of your posts that contradict
yourself......most recently,,,your inquiry as to what "slurp" was
referred to in your headers. Or your several accesss sites through,
around, and some that have nothing to do with Villanova U that you claim
don't exist.

>And I still claim that. I use ONE ISP, for all of >my internet needs.
In the last month or so, >they've changed the news server over to a
>different machine.

Only for you? Only in your area?

>I don't know how that reflects in the message >headers, but I use it
the same as I always did.

Wanna split hairs? Forget the ISP. You have accessed this group by many different avenues.

>I can't be responsible for the hardware >changes that my ISP does.

Sure you can. Obey the TOS set forth by the company you choose to access the group.

>And I still don't understand the meaning of the >term "slurp"......

Look at your current header. Quite different from at least 5 or 6 others, and that's just what was sent. there's probably more.

See, besides trying to take your advice concerning asking the FCC agent, I was also taking your advice as to not believe everything I was sent....so I admit, that claim had me curious, so I went and looked for myself. Are you still in business?

>I was never seriously "in business". Two other >local guys had a dealer >franchise,

A franchise? You now claim your little business was a franchise and that it belonged to others..is that what you are attempting to say, Dave?

>and sold radios to the local guys. I was the >guy who did >the repair work.

Why would a mere tech use the business as his sig? No Dave, you claimed it yours. This is beginning to be quite fun..you lie, and I show otherwise. No wonder Frank hallucinated he invented a "twistybuster"....worse yet, Dogie and Lelnad each bought one.

You claimed it yours back then. Another contradiction.

>I NEVER claimed that the business was mine. <

We'll keep that around for awhile to resurrect at the right time.

>It wasn't much of a "business" anyway. We >only worked the local crowd. I never made >enough money to call it a primary job. It was >my "radio slush fund", that I used to buy more >of my own gear.
>Hell, I've been repairing radios since I was 15. >I paid my first car's insurance and kept the gas >tank full from the proceeds of my ventures.
>And believe me, I saw my share of "clip and >peak jobs, gone horribly >wrong", in my day. I spent most of my time, >making borderline unstable radios like >Galaxy's, who had already seen the >screwdriver, operate with some stability and >cleanliness.

Oh really Dave? Is that when you were only the "repair guy" for the business? Once again, your posts show you did quite a bit more than "undo" Galaxies. Blow your bullshit somewhere else, Dave. You're all washed up here.

>It took a while to undo the "CB myths" that >most of the locals bought into, but after >hearing what a properly set up radio could >sound like, they finally started to see things >my way, and I had a ton of business

as a >result.
>But that was about 5 or 6 years ago now.

Riiiiiiiight! And you suddenly saw the light and everyone else who happens to partake in what you did is now a federal criminal (your words). So I guess you speak from experience as a self-admitted federal criminal?

>Yep. That's why I have such a keen insight >into the situation.

Once again, you fail to see yourself as the masses. Your insight is far removed from the popular majority as evidenced in your maintaining dx constitutes a federal crime. It is a shame after all this time you haven't found a dictionary that gives you the proper definition...maybe you should consult an online law jargon dictionary.

S'ok.
It would have been much easier on you to admit you are a hypocrite instead of denying and lying about it over the past how many months.

>What I may or may not have done in the past >in no way exonerates what you or anyone else >does now.

Who is looking for exoneration besides you and Lelnad at this time? Therein is another of your problems....looking to others for validation. Goes hand in hand with your rationalization that your crime was somehow above the law because in your mind you were upholding some greater law of morals........incredible.......!!

>but if you knew this guy, you wouldn't be >defending him

I am not defending him, rather you are using him as a justification for your lawlessness.

>or berating
>the actions that our local group did to get rid of >him.

Not your group, just you, as you are the one that has a hard-on for what you consider federal criminals and anyone that doesn't conform as you see fit.
Hey, the law is the law, remember? You are a sociopath (your words) if you deviate or make allowances, such as selectively ignoring laws certain laws, like dx or going above the posted limit in the desert. What's good for the goose.......

>That's not exactly true. A sociopath is >someone who make a habit of >thumbing his nose at the rules of society, or ?the idea of society itself.

Well, you claim I was one for disrespecting the mundane laws of dx and freebanding. Yet you had the illegal hack shack and somehow view yourself above that of a simple freebandng dxer...hahahhahahah...keep on keeping on....!

>The difference was that I was at least >attempting to correct some
really BAD advice >and modification work, whichresulted in a >cleaner
radio signal.

You also were involved in illegal sales.

>This had the net effect of reducing >interference potential.

Your illegal sales had nothing to do with such bullshit claims.

>You, on the otherhand, operate either >oblivious of, or indifferent to,
the potential >interference that you may create, while >chasing your DX.

Keep chasing rainbows.
Remote car control, huh? Those aren't hard to make,,,,all you gotta do
is
buy one and, well, I have a friend in Texas that perfected this a long,
long time ago.

>A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across
the band.

>That would've required trespass.<

Not if it's my yard. See, you suffer from this affliction and
distinction of limited view...it somehow disallows all other examples in
your limited grasp of things. But this isn't about me, it's about your
hypocrisy and lies.

>The final device that I made swept through all >40 channels. That was a
>little more complex to make.
>I guess it never occured to him to use his >mobile. Good thing too, or
>we would have had to risk attaching another >device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>Not to the best of my knowledge. <

Ignorance of the law is no excuse.

>We didn't
>have to trespass to plant the device,

Who said you did?
If you touched his car, as you claimed, with an intent to break another
law (as you also claimed) you were guilty of criminal mischief.
YOU were the only one who mentioned trespass.

>the device was part 15 covered.<

If you so much as TOUCHED his car during such an act, a crime was
committed.

>We never had to. <

Really? Let's see...you said....and I quote:"
>Good thing too, or
>we would have had to risk attaching another >device to his car.

"Another" implicates it wasn't the first time. And how do you attach a device to a car without touching it? Did you lie or simply forget? this may be your crowning monent, yet
.

>but hey, it was better than tieing the coax of >the guy's antenna to a
>car bumber and driving away like another local >had suggested.

Yea...that works better for antennas.

>But much more illegal.
>Dave
>"Sandbagger"

Freebanding!!
What is "Freeband, and Freebanding?
The Freeband are frequences and bands NOT intended for public use, and
fall between the 12 and 10 meter bands. They are a "no-man's land"

>Actually, they are allocated to various services >and organizations.
Hardly a "no man's land".
>Most states have highway patrol allocations in >there, forest service,
there's quite a long list.

Most were abandoned for more technically advanced modes of
communications. 27.555 has been relinquished to freebanders for years,
as have most of the other freqs between the legal 40 and 10 meter.

From: No Fear (nofear@home.comm)
Subject: twistys rantings
Newsgroups: rec.radio.cb
Date: 2001-09-24 19:38:29 PST
Look at how angry twisty is at people screwing up his once sacred
freeband, using amplifiers and even calling it a keyfest similiar to a
keydown!
As copied from Twistys Column in Sporadic waves
"Gone Crazy? International DX on the eleven meter and free-band is there
for the taking just about everyday on sideband. AM is also giving up
rare contacts. But one of the better known frequencies for international
DX contacts, 27.555 USB, once a jewel of pleasant listening and
international contacts, has unfortunately deteriorated rapidly over the
last few months, morphing itself into a vile cesspool, spewing forth all
it's bile and waste, due to a small, intellectually-challenged, rapid
group of angry, self-loathing and pathetic operators who have taken it
upon themselves to take up a permanent-like residential status there,
and in the process, completely abdicated any civil, polite
conversation."
"This small but nefarious group is attempting to jam, interfere, and
prevent any DX contacts from being made on frequency. In case you
haven't listened in on 555 as of late, the frequency has literally
become a key down fest with language that one would be embarrassed to
hear in the company of children, while only those blowing ridiculous
amounts of power are being heard."

Hahahha...no copyright violation there. Now you have to convince the
group that something in that post would have compelled me to
complain....you're not doing very well here. My reputation for thick
skin is what assists in rendering you poor girls impotent. Have a good
night :)

Forgive me rat, but I must pose the question to you, since so many seem to be afflicted with this malady, yet no one can provide the answer. Why is it, that some of those that are licensed for communication, (such as you just exhibited) suffer the biggest deficit when attemptiing such? If you read carefully (that means in order to comprehend) you shall see not only did I not accuse you of having anything at all to do with quest, I mentioned nothing concerning fake headers either. In contrast, what I was alluding to, was the path of a certain 12.229.160.36 suddenly appeared again, and it wasn't with your "rat" name at the top. Now go on and have fun, I won't spoil your little game. Matter of fact, we will just pretend I didn't notice it and you can carry on, if you can manage without insult.

>

Um, how is what I said a false sense of security? I didn't put a news
server up because of security concerns. I put one up because I thought it
was cool. The ISP imposed limitations I was reffering to are bandwidth
throttling measures, and concurrent connection limits. I enjoy the
control I now have over my newsfeed, that's all. For example, through
user based authentication I can connect to my news server from anywhere.
This is neato, because I'm rather mobile :) I can do the same with
certain free news servers, but I don't like their performance WRT
propagation delays. I could pay for better service, but why? Running a
news server is kinda cool. I've noticed that propagation delays are very
small compared to my old ISP's news server. UUNET is very well connected,
I've noticed. Far out.

Why did you mention upstream providers killing feeds when complaints fall
on deaf ears? Why would I receive any complaints? Why would I not respond
to complaints if I got them?

>27.999 is as busy as 10 meters when the >band is open right?

The freeband is WAY busier.

>Over all i must say it is, above 27.555

Not talking about above it. the statement stands alone without your
bullshit.
****
Which statement are you refering to specifically, since your vauge and
usually your posts look like your on hallucinagentics?

You said the freeband is way busier, I agreed and said overall it is, but
the freqs above 27.555 arent as busy as the rest of the freeband. Whats the
problem with that?

Well, there it is again,,,that must end it...hahahahhahahahaahah!
****
>No that's just my opinion just like you have >your and never use facts
to back them up
>in the 27 years i have used radio,

You can't back up an opinion with facts, Lelnad.

So now the TIME you put in suddenly means something?
****
>It sure does, after all he tried to impres me >with his 10 years of
radio experiance i figure I >woul;d let him know I was doing this while
he >was a twinkle in daddys eye and I was talking >to tim if i am not
mistaken why did you decide >to interject?

You asked for it by posting in public. If you wanted no input you
shoulld have taken it to email.
****
Well, actually you to said exactly what I wanted you to I hope you take your
own advice when Leland or someone else makes a post and interjects, and you
suddenly say they have some obsession with you. It also shows how much you
value what I say by answering me thanks for playing. I can say your
obsessed with me as much as you Nad is of you. Just wanted to make that
distinction.

>You said you only reply when your name is >posted.

No, YOU said that..I said I "ALWAYS" reply when my name is poseted or addressed.
Lies and false attributions you can't seem to get away from..it's as if you can't help yourself.....don't now any better..
****
Are you that fucked up on drugs or in the head? I said the exact same thing you did "you reply when your name is posted". You are such a pschopathic liar you accuse everyone of lieing when it is apperent that there was no lie . it is actually comical to a point to think some one can twist someone elses words the way you

>I didn't see it mentioned anywhere in this post. >Another Lie by Twistedhed

****
Of course that's why you change nics so dramatically, to avoid at least some of the ridiculous garbage you spew from being attributed you...classic of one unable to back anything they ever say.
****
>Nah sorry twist<

Beside the point.
****
yes you are beside the point

>another lie, I can do just like Mopar does X-No >archive real simple stupid

Mopar doesn't act like you. Mopar doesnt change nics like you. Mopar has no reason to not want his posts attributed to him, so unlike yourself.
****
Your right he is a totaly different asshole
Never said he did change nics did I fuckface?
Then ask him why he does it dick licker. Ill make you a deal Ill x archive my posts and keep the same address i will bet dollars to donuts you and the rest of your dickless posse reply to me whadda ya say twithed, It is too much effort to reply to your posts anyhow you have no clue how to attribute posts to people, you don't know how to quote thier posts, you talk like a dick with ears. twist i love playing with you since your so fucking stupid but I must tell you it is a great effort to do so. When you decide to upgrade the trailer get yourself a real computer so the rest of the world can make heads or tails of your blathering.

If we are to consider the posse named by "Arron", any of them asking for anything deserves nothing unless we decide it merits such,
****
>Who deemed you worthy to decide anything >for anyone .

The one whose "T" you wear so proudly. The one who, on occasion, validates you.
****
It is certainly not you I know your not man enough but you do sound queer enough.

>I will tell you why they use that freq(28.085), >because it is normally
>quiet it is in the CW portion

Gee, as opposed to exactly what?.....say...11 meter?
****
>As opposed to 28.350 or any other 10 meter >freq that allows voice
privleges.

Gee, you could have plagiarized my post.....
****
No I leave that to guys like you who can't think for themselves about
reality.

>Wonder why they don't hear anyone there huh >stupid because there is no
voice comms >allowed there thats why they stick out like sore >thumbs.
get Down the street twsisty
>they hear no voices so they think it is open, >and because they only
>have to click the band switch 2 clicks they >don't even have to touch
>channel selector it its that easy for them. If >they didn't have radios
that went to those >freqs do you still think
>they would talk there?

You are becoming quite philosophical..let's look at that again shall we?
You asked...."If they didn't have radios that went to those freqs do you
think they would talk there? Hmmmmmm!

>I highly doubt it,<

Did you hurt yourself arriving at that conclusion?
****
No unlike you I can see reality and can also accept it.

>the export radios with all the channels makes >it easy to break the
>law, up 2 clicks is what you always hear.
> Btw, how noisy can it be for
>them they are talking to truck directly in front >and back of them.

You are quite hostile these days. Everything ok? I mean, besides you not
getting away with Jack.....:)
****
Twisty you are seriously a mental case you actually think you have said
something or done something regarding what I said. Your nothing but a joke
who distorts and of course twists posts and what people say, then call them
liars. Your posts are so fucked up it is beyond sickening.

Any 1/4-wave groundplane would do the trick. (The Antron 99 is a
half-wave, which will give better distance than a 1/4-wave.)

Sir Ulrich is correct, actually. If your radio is "peaked and tweaked"
you'll overdrive any decent amp and sound like crap.

Best advice has already been given: Get your antenna working
correctly. Check your SWR and get it as low as possible. You already
have decent equipment.

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:239-3DC836BF-446@storefull-

Makes it illegal....end of story.

>>What do you care of Radio illegalities?

Depends on the legalities. Here I mention it only to illustrate Dave
Hall's hypocrisy of calling me a federal criminal for freebanding and
dxing over the years when he clearly went way beyond the realm of
breaking FCC law than I ever had.
****
>>Oh ok selective hypocrisy.<<

Certainly it was selective...he chose to come at me in a confrontational
manner by calling me names........that is selective..........and the
fact that he himself fit the profile of the names e accused so many
others of is hypocritical.....so yea....selective hypocrisy.

>>him making a low power jammer is not way >>beyond any realm you have
done

>sorta like you on the freeband you have no
>rights.

And you are angry over your impotence of the situation.
****
>>Twist I will ask again, what do you care about >>FCC rules being
>>broke, you break them all the time. Or the >>ones you break not as
>>important as others?

And I will tell you again......I illustrated them only to prove the
hypocrisy of someone who has been on the unprovoked offensive attack
against me for freebanding and dxing, for calling me and others
"fedeeral criminals" when he is no better...as a matter of fact, it
makes him worse....a hypocrite hammie.
****
>>Well at the time he did this he said he was a >>Cber

Wrong...he claimed he was MUCH younger than he is now. It was only a few
short years ago when he was spinning his felonious ways, not as a
"youth" that he chalked up to indiscretion.
****
Like I said was he a ham then or a Cber? Would you even know which ? How
would you know the truth? You would just assume to fit your agenda.

Where did he tell any of us he was the proprietor of a cb shop? He
didn't, and you look pretty funny desperately trying to
defend.....hahahahahhahaha!
****
I don't know you tell me how you would know if he was or not either he said
it or it is another lie on your part.

I am saying Dave is no better than those he called names and accused of
being federal criminals. Why is it that some (such as yourself) of those
that profess to be licensed in communications, exhibit such a deficit
when it comes to employing such?
****
Why is he out of work. Hey Dave do you need a job?

>>Yes same as you Dxing, freebanding with >>another individual,
>>premediatated as well since you know right >>well your breaking the
>>Law.

So now MY actions justify a hammie breaking the law? Hahahhahhahhahaah!
Yea.....
****
>>No I am saying your no better than him<<

Well, that's good, as it's the first amount of truth I have ever seen
from you.
****
You have no concept of the truth it never passes your lips.

I have never claimed I was better than anyone on this
forum..
****
No need to we have made up or own minds as to your worth...

that is reserved for a few pathetic angry nocodes, and of course,
parasites such as yourself. It is the reason for y'alls sparkling
popularity.

>>yet you want to chastize him.<<

Return fire, nothing more.
****
Ok I would call that trolling then. Wouldn't you?
And also hypocrisy on your part agin. heis jamming was done as return fire
yet the hypocrite you are says he is wrong. Can't have it both ways
twistsie.

The fact he is a hammie makes a difference?
****
you made the distinction, I asked if he was since you were the one putting
the label on him

Then hammies should be held more accountable for their actions, by your
Lelnad logic.....
****

really how so give us an analogy then?

HAHhahhhahaahhahahahhahahahhhaahhahaah
Hahahah....as always, because we talk about it, we must be guilty.
Better stay out of some of the alt. groups....you're heart couldn't take
it...hahahahhaha
****
>>Yes, you hold the hammies in this group to >>that why wouldnt you hold
yourself to the >>same light?

Don't start lying just because you buried yourself again.
I have never accused a hammie of freebanding merely because they may
have chosen to speak of it.
****
There goes twistsys favorite word lie, and here he goes twisting what was
said who is talking about hams freebanding? Friggin douch bag you are I am
talking baout anything that is said in general that you want to hold agaisnt
Hams, it is just all talk, right according to you, so what dave said about
jamming is all talk using your Logic hahahahaHAHHAHA

>>If you are talking about it than either you did >>it or are a liar
which do you prefer to be >>called?

Your inability to even comprehend why that statement is so far removed
from reality is plenty entertainment for me.
****
twsitsy your posts are so far removed from reality i think I am in the outer
limits replying to you.

>The final device that I made swept through all >40 channels. That was a
little more complex to >make.
>I guess it never occured to him to use his >mobile. Good thing too, or
we would have had >to risk attaching another device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?

>>Sounds like you!<<

You, too. Dx and freebanding. But the fact you feel it justifies you
breaking other laws is common among lawless sociopaths.

>>Not to the best of my knowledge. < <

Ignorance of the law is no excuse.

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.......you keep asking for excuses....
****
Well if thats the only answer your capable of giving.

If you so much as TOUCHED his car during such an act, a crime was
committed.

>>Cite it?<<

Criminal mischief. No go clean off.
****

Not quite Twitsy he didnt do any damage to the car, nor did he cause any threat of danger this the statue directly from Pa the state he and I live in. If I was his lawyer, that charge would surely be dropped.

try another. http://members.aol.com/StatutesPA/18.Cp.33.html
§ 3304. Criminal mischief.
(a) Offense defined.-A person is guilty of criminal mischief if he:

1.. damages tangible property of another intentionally, recklessly, or by negligence in the employment of fire, explosives, or other dangerous means listed in section 3302(a) of this title (relating to causing or risking catastrophe);
2.. intentionally or recklessly tampers with tangible property of another so as to endanger person or property;
3.. intentionally or recklessly causes another to suffer pecuniary loss by deception or threat; or
4.. intentionally defaces or otherwise damages tangible public property or tangible property of another with an aerosol spray-paint can, broad-tipped indelible marker or similar marking device.

>There might have been a grey area over the >true intended use,

No gray area.. You freely admitted
you were doing it with an intent to jam, making you in violation of the FCC and what you consider federal law, which makes you a federal criminal (your words).

First of all, in the years I have been here,
neither have I seen claim anything concerning their hammie license, so it doesn't really apply or matter except to thugs like yourself.
****
Just because you don't know doesnt make it not true. It doesn't matter because it doesn't fit your agenda.
Secondly, both have constructively assisted those in need, and I have witnessed on more than occasion of Toll cleaning the clock of those that came in here spouting off something they read in a book with a chip on their shoulder.
****
How would you know who's clock he cleaned it is not like you understood what was being said.
He thinks he knows it all and continues to do so on other forums and he continues to have confrontations with other "Cbers" so what does that tell you. But then agin Toll is a Hammie so he is Good. LOL

>>Are they hams when convienant or just when >>it fits your agenda?

Ask them. Again, in almost 4 years I have seen neither say anything concerning hammies.
****
Thats is not what the point is they are Hams and Illegal Cbers, so which would you classify them as ?

If they did something you approve of perhaps they are Cbers, do something agaisnt you then they are Hams right?

Yea, well, it has the power of really twisting the psyche of some....hahaahhahahh!
**********]
whats your excuse then?

> use the HF frequencies. If not you can't use the HF frequencies.
> Just my opinion.

You ask the question, then you answer it.
HF is not everything. There's a much wider world available to a no-code
tech than meets the eye. As a no-code tech, you get 6 meters, which is
HF-like, and VHF-like, as well as 2 meters, 220, 440, 902, 1296, etc etc
etc.. All modes, all privs.

Here's the list.
http://www.hamquick.com/tutorials/t1b.html
Without CW, you get the "Technician no code" bands.

4+4+3+30+26+60+10+60 = 197 Mhz total.

Even "just" the 6 meter band is wider than the "freeband", including the
part that's in the ham 10 meter band!

power walkie talkies, or >remote control transmitters
****
Even if he could read it he would twist the words around.

The law doesn't have to prove anything when a confession is given of
ones own free will, unabetted.
****
Another twisty Lie ... What's that like you admitting to being a freebander,
fed criminal on here? So they don't have to prove anything... Hmm I thought
it was all just talk twit...

The rest? Oh you mean the rest of your self-contradictions? Hell Dave, I
don't need to do as much,,,you serve up nicely.

that was sent to me by an upperclassmen who is familiar with your
hypocrisy. There are several of your posts that contradict
yourself......most recently,,,your inquiry as to what "slurp" was
referred to in your headers. Or your several accesss sites through,
around, and some that have nothing to do with Villanova U that you claim
don't exist.

>And I still claim that. I use ONE ISP, for all of >my internet needs.
In the last month or so, >they've changed the news server over to a
>different machine.

Wanna split hairs? Forget the ISP. You have accessed this group by many
different avenues.
****
You should know your the master harr dee harr har ...

Sure you can. Obey the TOS set forth by the
company you choose to access the group.
****
Now your insinusting you had his account yanked?

>a remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across
the band.

>That would've required trespass.<

Not if it's my yard. See, you suffer from this affliction and
distinction of limited view...it somehow disallows all other examples in
your limited grasp of things. But this isn't about me, it's about your
hypocrisy and lies.
****
Now your jamming yourself titsie? you told him to put it in close to the
guys home not yours don't twist what you meant

Who said you did?
If you touched his car, as you claimed, with an intent to break another
law (as you also claimed) you were guilty of criminal mischief.
YOU were the only one who mentioned trespass.
****

Touching his car with intent means nothing read the letter of the law
stupid.

Pennsylvania Consolidated Statutes
CRIMES AND OFFENSES (TITLE 18)

PART II. DEFINITION OF SPECIFIC OFFENSES.
§ 3304. Criminal mischief.
(a) Offense defined.-A person is guilty of criminal mischief if he:

1.. damages tangible property of another intentionally, recklessly, or by
negligence in the employment of fire, explosives, or other dangerous means
listed in section 3302(a) of this title (relating to causing or risking
catastrophe);
2.. intentionally or recklessly tampers with tangible property of another
so as to endanger person or property;
3.. intentionally or recklessly causes another to suffer pecuniary loss by
deception or threat; or
4.. intentionally defaces or otherwise damages tangible public property or
tangible property of another with an aerosol spray-paint can, broad-tipped
indelible marker or similar marking device.

>the device was part 15 covered.<

If you so much as TOUCHED his car during such an act, a crime was committed.

>We never had to. <

Really? Let's see...you said....and I quote:"
>Good thing too, or
>we would have had to risk attaching another >device to his car.

"Another" implicates it wasn't the first time. And how do you attach a
device to a car without touching it? Did you lie or simply forget? this
may be your crowning monent, yet
****

I assume he means "another" as compared to the one on the base station, and another on the car. Of course we all know you will twist to fit your agenda!

touching the car is not criminal mischief something more sinister would have to occur

§ 3304. Criminal mischief.
(a) Offense defined.-A person is guilty of criminal mischief if he:

1.. damages tangible property of another intentionally, recklessly, or by negligence in the employment of fire, explosives, or other dangerous means listed in section 3302(a) of this title (relating to causing or risking catastrophe);
2.. intentionally or recklessly tampers with tangible property of another so as to endanger person or property;
3.. intentionally or recklessly causes another to suffer pecuniary loss by deception or threat; or
4.. intentionally defaces or otherwise damages tangible public property or tangible property of another with an aerosol spray-paint can, broad-tipped indelible marker or similar marking device.

Yes, I don't know what they do at the weddings you go to but it is customary
for the guy who catches the garter to put it on the female who caught the
boquet of flowers. It usually makes for a un comfortable situation for many
as the guy pulls the garter up we all ways try to coax him to go higher....
I am sure you know what I am saying.

Subject: twistys rantings
Newsgroups: rec.radio.cb
Date: 2001-09-24 19:38:29 PST
Look at how angry twisty is at people screwing up his once sacred
freeband, using amplifiers and even calling it a keyfest similiar to a
keydown!
As copied from Twistys Column in Sporadic waves
"Gone Crazy? International DX on the eleven meter and free-band is there
for the taking just about everyday on sideband. AM is also giving up
rare contacts. But one of the better known frequencies for international
DX contacts, 27.555 USB, once a jewel of pleasant listening and
international contacts, has unfortunately deteriorated rapidly over the
last few months, morphing itself into a vile cesspool, spewing forth all
it's bile and waste, due to a small, intellectually-challenged, rapid
group of angry, self-loathing and pathetic operators who have taken it
upon themselves to take up a permanent-like residential status there,
and in the process, completely abdicated any civil, polite
conversation."
"This small but nefarious group is attempting to jam, interfere, and
prevent any DX contacts from being made on frequency. In case you
haven't listened in on 555 as of late, the frequency has literally
become a key down fest with language that one would be embarrassed to
hear in the company of children, while only those blowing ridiculous
amounts of power are being heard."

Hahahha...no copyright violation there. Now you have to convince the
group that something in that post would have compelled me to
complain....you're not doing very well here. My reputation for thick
skin is what assists in rendering you poor girls impotent. Have a good
night :)
****
*****

Your exactly right to no copyright violation, LOL I have to convince no one they can see for themselves thats why your complaint went unfounded. I have shown you admitted to sending the complaint to @home where you accused me, now as the group can se that post, you have produced nothing to contradict it even after you admit being the rat, any normal thinking person would assume it is out there in archive land the post that made you cry to my Isp, it must be there. If It was me, I would post it to prove I am wrong. You haven't and you won't because that is the only one I ever wrote that had the sporadic waves article on it, from @home. Go wash off now, you stink!

I am curious too. Until this fall I use to hear so much chatter on 19 mostly Truckers and Truck Stop whores. But now all I hear are the guys that are talking to each other because of Skip conditions.
I know of at least two truckers that use Freeband channels. I have a scanner that I have set to the FRS and GMRS frequencies and have yet to hear any of the truckers.

I still think so. Look up the extended double Zepp and cut it in half. If my omission of the word "extended" constitutes an error, then I stand corrected. The IMAX-2000 is a vertical end fed "extended" Zepp, not a 5/8-wave as advertised.

\
\

I was waiting for my Dad at the Dr's office this afternoon, so I sat in the
car idle tuning around the
12, 11, and 10 Meter bands. On 27.555 there was a guy playing music (4:30PM
EST), another
one saying over and over "Canadian High Power, Canadian High Power" then
singing (if you could
call it that) the same phrase, another throwing carriers, and a conversation
in back of that. Truckers were on 26.025, Spanish on 26.625, truckers again
on 28.085 and interspersed in 10
Meters all the way up to 28.735 AM. I got on SSB and began to call CQ on
.735, the truckers
fussed about it and moved off. Hmmm, 27.555 sounds just like the CB I know.

>High power dosen't help in DX, on CB or >10M, when the band is closed, it's
>CLOSED. When it's open,
>5W will do the job.
What have you been smoking????
Power doesnt help in DX???? What bullshit! A stock radio can get thru on a clean freq (they dont exist) but add 100 watts and see a major improvement...add
300 another big gain...add 600......etc
I agree when the band is "CLOSED" running even kilowatts wont make a diff.
5 watts???? You wont even be heard....you will be squashed!
If the 29 has been peaked you will need to know what the output is both dead key and max out. A high drive amp will work fine with the 29 but most generic HD Palomars are said to be max input 12 watts. You cant run a competition amp (Davemade, Xforce etc) without a very low dead key...2-4 watts MAX. I would suggest learning more about your setup and how it all works together and how to optimize the setup...then if you wish try an amp and know how to use it. Xforce amps are not biased unless you pay for the mod. However, this is not a problem on SSB as you simply roll the modulation back and they work fine. I laugh at the 102 whip idea...not possible for most vehicles...
pick up a decent whip with a length of 5 to 7 feet with a tunebale tip....that'll help your receive and transmit. Try using about 13 foot of coax....get the SWR tuned right...you may decide to keep it the way you have it...but i doubt it.....

Locally, channel 17. At least up to a couple of years ago, when I gave up on CB due to, among other things, too many morons with illegal high-powered transmitters interfering with others' conversations.

Dang, what can you gain by tweaking/peaking a handheld? At 27 MHz, you have a very inefficient antennna and an even more inefficient grount. Not worth the effort.

That's what it was like up until the end of the summer. Now I hardly hear
anyone except the Skip talkers. When ever I tried to talk to someone I
would get walked on by some one with a linear attached to their rig.
I started to see why CB got the nickname Childrens Band. But now I have
decided to get back into CB radio and there's no one to chat with.
I haven't given up on CB, I have been a fan of the hobby since I was a
little kid when CB radios only had 23 channels. I got hooked on the hobby
when my parents bought me a walkie talkie that had channel 14 crystal in it.
I used to talk to my neighbors who were cb'ers. Then I got hooked again
when my family had a Cobra SSB CB mobile rig that I hooked up as a base
station. I used the mobile antenna that I put smack in the middle of our
metal roofed Trailer House. I got pretty decent distance when talking.
I saw on a website that CB is supposed to be making a comeback, so the
companies that make them are going to continue to make the radios.
Let's hope so.
Sorry if I was rambling on in this message.

Still didn't answer my question. I use rechargeable Nimh AA batteries so I
always have a supply of charged batteries. So that's not a problem.
I had a friend that used to tweak the power of handheld cb's but he left
town and I don't know how to get a hold of him.
If it's possible to mod where can I find it?
Thanks,

>exciters (radios).

That's because they are amps that are intended for the illegal CB amp
market. And it's not just theory -- you can drive one to full power
with nothing more than a cheap bench-top sig-gen. It's not a smart
idea, but it can be done.

>We should be talking practical circuits here... Few common radios output
>5 milliwatts. Taming your dream +47dB amplifier is not realistic, nor has
>it been done in any real world amount that I've seen actual examples of.

I didn't say it was practical. It requires a lot of shielding and
grounding, or else you are going to blow up your tube. But if you want
to put in the extra effort it's entirely possible, and it has been
done many times.

>I can actually get the circuit example I provide above to operate with
>little or for the most part, no neutralization. A real technical task for
>this type of near 17dB amplifier.

Hardly difficult when you realize that the Cgp of a 4CX250 is only a
meager 0.04 pF (compare that to your sweep tubes). As long as you have
tight screen regulation you probably don't even need neutralization.
But a neutralization cap is cheaper and easier than a seperate power
supply for the screen. However, if you really want, you can regulate
the screen with nothing more than an LM317.

>You obviously haven't built many amplifiers using the 4cx250b, I have. The
>real word drive levels I indicate allow one to use many of the 2-10 watt
>HF radios built through the years. You only seem to read and quote
>from text books and on line data sheets.

Like I said before, come on up here and I'll show you where I work.
And I have built a few amps in my time. But I wouldn't even attempt a
high-power project without valid, reliable information provided by
data sheets; it's also a pretty good idea to use the general

engineering practices outlined in most of those books you prefer to ignore -- they weren't published just to occupy shelf space at the library, Skippy. They are filled with much of what has been learned about the subject, both good and bad, by countless engineers and technicians over the course of the last century. To learn only from practical experience is either totally ignorant or proof that you can't read. We all know you can read, Skippy.

>:>The 4cx250 tube also has much more serious potential vhf parasitic
>:>problems.
>:>Building rf amp with it is not for first time builders.

>
>Not entirely true... Had you any true breadth of broadcast experience...
>you might have seen some really high powered broadcast transmitters with
>additional parasitic supression circuits included. Plate and/or
>grid parasitics chokes are not the "all" cure for every case.

Since when are we talking about broadcast transmitters? Ok, if you really want, we can go there, too. Most broadcast transmitters have parasitic supressors on both the grid and the plate, as well as multiple traps (what you call "additional parasitic supression circuits") throughout the amp and tuner that are tuned to prevent any possible harmonics and self-resonanance. And the better transmitters have variable bypass capacitors and chokes to prevent both low freqency and high frequency parasitics. But what you will find as common practice in almost any broadcast transmitter is the intensive shielding between the input and output circuits, which usually employ seperate regulation or power supplies for added isolation.

Now, do you want to talk about broadcast transmitters? Or would you rather explain why you think the 4CX250 has "much more serious potential vhf parasitic problems"?

>Now to the actual issue...
>The common sweep tube has very poor gain at and above mid, to high vhf
>frequencies. Resonant VHF paths in the Sweep tube amplifier box are not
>really a large red flag; where-as they must be considered with each
>application of the 4cx250b.

You need to consider them with ANY kind of tube regardless of the gain bandwidth, since you can even get -audio- tubes to oscillate at VHF freqs. You also have to watch for low frequency parasitics -- low freq parasitics can burn up a tube just as fast as VHF parasitics! This is a MAJOR issue to prevent your amp from oscillating on an IF freq that may not have been well filtered from the exciter. But they can happen

even without any excitation! To downplay the possibility of parasitics
just because the tube doesn't work well at VHF is... well, ignorant.

>Some amateur rf amplifiers with reported histories of problematic vhf
>parasitics, they actually pulled from the market...

How many? Which ones? What makes and models? Did that/those amp(s) use
the 4CX250? Were any sweep tube amps ever pulled for the same reason?
If you are going to support your claim that RF tubes have bigger
problems with parasitics than sweep tubes then you need to show a
statistical disparity, especially in the face of the fact that the
majority of amateur amps used RF tubes and that some of them are bound
to be defective in some way or another.

>: Your scare tactics aren't working, Skippy. And scare tactics don't
>: work on the voltage issue, either -- a capacitor bank full of 900
>: volts will kill you just as dead as one topped off at 2000 volts!
>
>Actually not exactly right... above and below certain potentials, one
>might be blown back or compelled to hold on during accidental contact. But
>that's another topic.

LOL! Were talking joules here, Skippy! Oh, that's right, you don't
read books so you wouldn't know about joules. Haven't you ever
wondered why you can put your hand on the globe of a Van de Graff
generator (a few hundred THOUSAND volts) and just get a good tingle,
but you can die from house current? It's about the amount of energy
that's packed into the jolt! And power supply capacitors store quite a
bit of energy -- lethal, in fact -- regardless of whether they are 500
or 2500 volts!

>Some of the major issues to be considered when building higher/lower Ep
>amplifiers are the additional hv spacing requirements for the chassis

An additional 1/4". And you forgot about the need for proper chassis
grounding with ANY high voltage application.

> and
>the higher breakdown requirements of the hardware. Higher voltage
>supplies, their technical requirements and the additional parts cost a lot
>more money...

Well, televisions have power supplies that can provide from 10,000 to
35,000 volts, as do CRT computer monitors. Laser printers and copy
machines use several thousand volts for their hardware. Eletrostatic
air cleaners and neon signs also run on a few thousand volts. None of
these things are particularly expensive, and the HV supplies don't
have any more technical requirements than a little more insulation.
And your argument becomes even more lame when you realize that the
1000 watts of RF on your output tank can generate some voltages well
above that of the power supply. So if you use the same precautions
with your power supply that you use with your output tank, you won't
have any problem.

>: If you want a low-cost simple-to-build amplifier you should try the
>: venerable 6146 or 807 (basically the same tube). That's one tube that
>: you have to try really hard to make it NOT work. My suggestion for

>: your way up from there.
>
>The 6146b is a nice tube, builders just have to always concern themselves
>with the VHF operation of the tube.

Use a parasitic supressor, just like you should with any other tube in
an RF application, be it a sweep tube, RF tube, or even audio tubes
like the 6L6, 6V6 and 6AQ5.

> The 807 is nice, but in my
>experience a real pain in the pazoo to get practical power gain near
>28Mhz.

That's why they turned it into the 6146.

> I really like both the 6L6 and the 6V6 but I avoid them in
>preference to tubes with top mounted anode connections. Stable high gain
>rf power operation of an all base pin connected tube is not so easy.

Oh that's total and complete BS! Most tubes have the plate and control
grid pins well seperated, and if you want more shielding all you do is
solder in a small piece of sheet metal (copper or tin) between the
pins. You also pay attention to the direction of the leads to prevent
inductive coupling (just run them at right angles to each other).
These are BASIC RF techniques that should be learned BEFORE you embark
on amps of higher power!

> I
>actually fixed a 6L6gc tubed guitar amp about two years ago with a

What's funny about it? I see it once in a while, and it's usually
caused from the same problem I mention above -- improper shielding,
and coupling from stray capacitance and/or inductance. The basics.
Quit ignoring those books, Skippy, and these things won't seem so
"funny".

>:>> Through Eimac's official distributer (Richardson) they only

>: can get the 4CX250B from Bruckner for $110.
>

>Along with the required special socket, chimney and adequate cfm blower...

For an additional $60 to $100 if you buy them new. Now considering
that the 4CX250 is going to be in production for a very long while,
and with sweep tubes costing more and being manufactured less, I think
that's a pretty good deal! Actually, it's poor engineering practice to
design using components on the edge of obsolescence. (You want to talk
about "dated" designs, take a good hard look at your sweep tube amp!)

>:> I don't buy 6LF6's new anymore... I can and do buy

>: I don't buy sweep tubes so I really don't care. Matter of fact, I have
>
>The fact is, they are once again low cost and easy to get.

For how long? From how many manufacturers? How many markets support
this 'widget'? The fact is that televisions (the intended application
for the tubes) don't use them anymore, and the other market consists
of a couple amp manufacturers and a few hobbyists. There might be one
or two manufacturers that will make them for any length of time, but
at increasing cost as the old stock gets used up. And as the price
increases, the market will switch to more cost-effective alternatives,
putting sweep tubes out of production and into the history books. It
performed its function for which it was designed, and it did that very
well for many years. The reality is that the sweep tube is already
obsolete, but there are a few die-hards like yourself that insist on
scraping every last trace of peanut butter from the jar. That may be
fine for you, Skippy (no pun intended), but the rest of us know when
something belongs in the trash.

>:>> you want one REALLY cheap you can pick up a National for $43 from

>: 4CX250B M WESTGHS,SYL $ 80.00
>: 4CX250B M NATIONAL $ 43.00
>: 4CX250B M RCA-CHINA $ 43.00
>: 4CX250B M STAR $ 65.00

>
>Add the required special socket, chimney and an adequate cfm blower
>along with the higher voltage anode screen and control grid power supply
>requirements to the list...

That's part of the deal -- you get what you pay for.

> Not nearly as simple to build,

Actually it has fewer components than a six-tube amp. But I can see
where you might think it's more complicated -- you aren't duplicating
the same circuit six times.

> not nearly as
>cheap to make.

But you have a much better amp.

> All the lower cost tubes in your list are probably from
>asian sources. A few might be russian...

Where are your imported sweep tubes made?

>: BTW, Star makes a pretty good tube. But the point is that, watt for
>: watt, sweep tubes aren't that much cheaper than RF tubes anymore, even
>: with the hardware (which will add $20 to $100 to an amp, depending on
>: where you get the stuff).
>
>You didn't quote the prices for the additional hardware I list just
>above... even resourceful people will have a problem keeping new hardware
>costs below your pretty low ball $100 amount.

Now where did I say that the RF tube amp is less expensive? I'm not
claiming that at all. What I am saying is that there isn't that much
difference in the cost of the two amps, and for the little extra money
the amp builder can build a much better amp. Like I said, if you want
a full cost analysis I could provide one, and I'm sure that it will
cost more than a sweep tube amp. But not much more. Now if you want to
keep repeating your parsimonious argument, then you go right ahead
because I'm not disagreeing with you one bit!

>:>I get brand new sweep tubes direct from Eastern Europe... you buy
>:>retail or
>:>from tube distributors. I buy direct and get the best prices. Wanna

>
>But as indicated in your posts, you don't appear to have any real world
>experience building amplifiers. Have you actually built any amplifier
>from scratch you can talk about..?

As indicated in your posts, you don't appear to have anything BUT
experience building amps -- i.e, you duplicate the work of others and
lack the theory and engineering skills to actually design and build
one "from scratch".

Now to answer your question, yes, I have built several amps as well as
transmitters, however neither the designs nor the devices belong to me
(that's one of the drawbacks of working under contract). But if you
want, just set up an account and I'll design and build you an amp that
we can discuss until we're old and grey. Of course it will cost a
little bit more than a sweep tube amp....

But then again, there was that amp I built in NC. A few of us built a
couple amps with the 4-1000, trying to copy the design of the
AN/MRC-110. They worked fairly well using CB's for exciters. We even
had arguments as to who's was better, so we would drive them out to
the parking lot of the Shipwreck and ask other CBers on the channel
who was louder. But that was back in 84-85, and the details about the
amp are a bit foggy. I do remember, however, that we 'appropriated' an
original MRC-110 matching unit coil from a shop over on mainside, so I
guess we didn't build it completely from scratch....

>: But somehow I knew that your bias in favor of sweep tubes was
>: financially oriented. Because it certainly wasn't based on sound RF
>

I made the offer twice and I'll do it one more time: come on up and
see where I work. You would like the shop, I'm sure. You might not be
able to find your way around the equipment, but you would sure have
fun trying. I'll even let you climb the tower if you don't mind doing
a little painting while you're up there.

>Hope your broadcast station is solid-state frankie...

Hope someday you will know the difference.

>By the way, you can still hear one of my past projects on 1640 most every
>night. Try listening to (now) kdia 1640 Vallejo, CA. I placed the first
>legal expanded band AM station transmitter on the air west of New Jersey
>as 1640, then callsign KXBT. Had a nice Sweep Tube.... &%$##@A... a'ha

>got'cha for a moment... "big tube" transmitter honking out a big signal.

10kW day and 1kW night, I wouldn't call that particularly "big". But what part did you play in this "project"? Why isn't there anything about it on your website?

>Still waiting for any web pages, reference articles or projects you might
>care to share with us Frank. You've been pretty quiet about any real
>world experience

Not suprising, since I'm not an amp junkie, illegal operator, or a ham. I'm just an underpaid electronics engineer that enjoys his work. I also enjoy CB radio, which is why I don't enjoy sweep tube amps mucking up the spectrum.

> and you seem to think you're the only one on this news
>group working in or around broadcast stations. Once again, not so...

What is it that you do or did there? And why do you keep shifting the conversation into topics barely relavent to the subject? You aren't afraid to address the facts about sweep tubes, are you, Skippy?

Really? Operating a part 15 device, for the purpose of ridding the CB band of a disruptive influence and a source of interference, is worse than operating on frequencies not authorized by the FCC, with the potential to cause interference to legitimate radio services?

I fail to see it that way, and I'm sure if you ask an FCC official, he would likely not agree with you either, considering the comments that I got from the one that I ran into shortly after the whole affair.

There's a big difference between "allocated" and "used".

> Most states have highway patrol allocations in there, forest service,
> there's quite a long list.

Oh? I'm not aware of any state highway patrol using 26 or 27 MHz. They use low band VHF as a rule, up around 42 MHz; I've heard Missouri and Indiana in that range, and I believe California still uses it. The Forest Svc normally seems to use high-band VHF.

OTOH, FEMA has some allocations around 11 meters but has never used them to my knowledge. I doubt that they ever will since they have more reliable VHF and UHF communications these days.

No, I haven't. You look too hard for things that aren't there. But
suppose I DID use a different ISP, what's the difference, I use my real
name, and my E-mail is still the same. Unlike you, I have no need to
conceil my identity.

>

Maybe my newserver has a dynamic routing. I don't know. I'm not a
pencil-necked internet geek, so I really don't know the nuances of each
and every routing protocol.

>
> See, besides trying to take your advice

> it belonged to others..is that what you are attempting to say, Dave?

No, I'm not "attempting" to say anything. I'm TELLING you, straight up,
that the "business" was a side line operated by two local friends of
mine, and that I did repair work for them. I made NO money from the
sales of radios.

>
> >and sold radios to the local guys. I was the >guy who did
> >the repair work.
>
> Why would a mere tech use the business as his sig?

Uh, as a way to drum up business? I was the only one on the internet at
the time, and thought it might be a way to expand our operation. Nothing
sinister there.

> No Dave, you claimed it yours.

Where? Prove that one. I never did any such thing.

> This is beginning to be quite fun..you lie, and I show

> "undo" Galaxies. Blow your bullshit somewhere else, Dave. You're all
> washed up here.

I've been "in the business" of reparing radios since I was 15, as a
sideline. I was associated with the particular business in question for
only about 2 years, back in the 1995 time frame. I operated
independently, my name was listed nowhere in this dealer franchise.

> >Yep. That's why I have such a keen insight >into the situation.
>
> Once again, you fail to see yourself as the masses. Your insight is far

> >The difference was that I was at least >attempting to correct some
> really BAD advice >and modification work, whichresulted in a >cleaner
> radio signal.
>
> You also were involved in illegal sales.

You assume way to much and have no proof. First off, you don't know what
we sold. It's perfectly legal to sell type accepted radios to people.
Why would you assume that the business sold anything else? secondly, I
was not involved in the sales end. I only did the repair work. Something
else that you have no evidence to the contrary.

> >You, on the otherhand, operate either oblivious of, or indifferent to,

We're not talking about YOUR yard, we're talking about the guy who actually got the device planted. In his case, planting a device a few yards away WOULD have required trespass. The fact that you live on a postage stamp sized yard doesn't mean the rest of us do.

>
> Who said you did?

> device to a car without touching it? Did you lie or simply forget? this
> may be your crowning monent, yet

Actually, this is your crowning moment of comprehensive ineptness. Yes "another device" means a second device after the first one that we planted outside of his yard. Duh! You really are dense aren't you? We never went near his car. But if we did, we would have had to make "another" device to plant on his car the "first" time. Get it yet? I really hate having to talk to you like I talk to my 3 year old daughter.

Sometimes I think she understands better.

You should know me well enough by now to know I don't often chase
molehills, Hans. This started as a discussion with an eBay employee, with
questions I could not answer. Rather than just give my opinion, which the
employee would probably be satisfied with (it's just a friendly discussion
on this issue), I thought I would see what others thought.

I don't think so, Bruce. Code isn't that much of a barrier now and I still haven't had much interest in another license class. Again, if my situation changed, that might change. By the way, I did start practicing Morse Code a few months back. However, it simply bored me to sleep and I gave up. Like I said, the motivation just isn't there.

> happened, did it?

You're talking about a small minority of hams on a limited set of frequencies, while I'm talking about a widespread problem on the CB frequencies. The two issues are not even in the same ballpark (and one has been reduced even further while the other is still commonplace).

> Denial is the worst form of vanity.
> I agree that CB needs to be cleaned up,

I agree. So why do you insist in endlessly downplaying the problems on the CB frequencies? If the CB radio service wants respect, then it has to clean up the problems first. And that means honest CB'ers (those running legal stations and not causing problems) have to start screaming for enforcement and stop empowering those who do cause the problems (socializing with them, ignoring their illegal activities, etc).

> but I don't agree with a bunch of hams
> attacking CBers when they try to run
> clean power,

Those operators are being "attacked," as you call it, because they
are operating illegally. I would just as quickly "attack" a fellow
ham, or a member of any other radio service, who was operating illegally.

> NOR do I agree with amateur operators
> coming to rec.radio.cb telling us how
> fucked up this radio service is, when their
> own is coming under scrutiny for the same.

First of all, I didn't come to rec.radio.cb. I'm posting from a ham
radio newsgroup to a cross posted thread. Second, as long as I have a
CB in my desk drawer (a handheld I use in the truck occasionally), I
have just as much right to be in rec.radio.cb as you do. And, finally,
the problems in ham radio are not the same as those of CB - the
problems associated with the CB radio service are much more severe and
much more commonplace. And it is the hams themselves who have
requested the increased enforcement of ham radio, while no such
widespread request has come for CB'ers (including yourself).

> You think the ratio of bad apples to
> good isn't about the same? How many
> ACTIVE licensed amateurs are on the
> air? How many CBers?

Sorry, my friend, but that just doesn't cut it with me. I was a
CB'er for over twenty years (in 6 different states) and now a ham for
almost five. In fact, I suppose you could still call me a CB'er if you
count the very rare use of a handheld while traveling. At one time,
there were more good CB'ers than bad. But that is simply not true
today. The overwhelming majority are operating illegally (out of band,
excessive power, etc) or violating the rules in one way or the other
(foul language, causing fights, and so on). The exact opposite is true
for ham radio - the overwhelming majority operate properly and don't
violate the rules.

> This would actually be fun to look
> into, as I KNOW the amount of hams
> is dwindling.

And how would that compare to the slow decline of CB since it's peak
in the seventies?

> Take a look at the big 3 ham mags.
> All they can talk about is how it is a
> dying hobby. Sad but true.

At least there are hams magazines to talk about. Care to name a
single magazine dedicated solely to CB still in existence? Care to
name one with anywhere near the same number of subscribers? Care to
name one with the same level of technical coverage? Or perhaps we
should talk about books instead? Or perhaps you'd like to show me the
CB radio organization with the scope and influence of the ARRL? If
you're going to use talk in a magazine as proof that a hobby is dead,
then it should be very clear to you that CB was dead a long time ago.

> CB is growing more and more. Which
> yes, means you get more idiots.

Care to provide some proof of that? CB is nothing but a shadow of what it was in the seventies. And, based on what I've seen, it has been in slow decline ever since (in spite of the occasional peaks of interest).

> > However, if you compare the USE

> is what comes out of the rig, thats what
> they run.

Well, the last time I checked, it was legal to run 100 watts on the ham bands. But, regardless, your response avoids the subject of illegal power amplifiers (running more power than necessary is not an illegal power amplifier). So how does your comment about running more power than necessary dispute my comment about the use of illegal power amplifiers in the two radio services? For that matter, I noticed your message avoids responding to most of my comments (the treatment of women, for example).

Look, as far as most people are concerned, the FCC has done a really poor job over the last 25 years when it comes to enforcement of CB. In other words, the FCC did a crappy job of policing CB in the 70's, a horrible job of it in the 80's, and hardly anything at all in the 90's.

FCC enforcement has become a joke in the CB community, with widespread abuse of the regulations now commonplace. By my estimate, there are now more people openly selling illegal CB linears than there are people selling legal linears for all the other radio services combined.

And, throughout that 25 years, I can only imagine how many millions of complaints were sent to the FCC, with most of those complaints largely ignored. Or how many millions of frustrated neighbors have had to sit through interference of their telephones, televisions, or other electronic devices, over those same years.

Anyway, the point is that this situation existed long before Finegold, or most of the other members of the current Congress, ever stepped foot in Washington. So, in my opinion, it is rather disingenuous to point at them for what I, and many others, see as a clear failure of the FCC to enforce the CB regulations.

Sadly, at this point, given how widespread the problem has become, the only way the FCC could enforce the regulations would be to increase its enforcement staff greatly. And I don't think most Americans would want to see another hugely expanded enforcement agency in Washington. In my opinion, we already have way too many cops in Washington as it is.

So, the only solution left is to allow local enforcement. In other words, in my opinion, even bad local enforcement would be far better than what we have now from the FCC (which is virtually no enforcement).

But, there is no reason that bad local enforcement has to be the end of the story on this. The FCC is being given a new job when it comes to CB enforcement - that of mentor and guide. If they do this job well, then bad local enforcement can be minimized. In other words, lets hope they do this job better than they did the job of CB enforcement over the last few years.

> ham. Those rules that you quote apply
> to a CB transceiver being operated in
> the CB band. [snip]

Perhaps I missed something, Jerry. Can you show me where it says there is an exception for ham operators?

Remember, when you start taking the screws off to modify that CB radio, that is a CB radio (not a ham radio). Therefore, at this point, all CB related rules apply (not ham radio rules). And those rules specifically ban internal modifications by anyone not certified.

According to section 95.424 (see below), _ONLY_ a person "certified as technically qualified to perform transmitter maintenance and repair duties" can make internal repairs or internal adjustments to a CB. Therefore, unless that ham operator has been "certified as technically qualified," that ham operator cannot make "internal repairs or internal adjustments," which would include internal adjustments to change frequency coverage. There is nothing in this section that provides an exception for ham operators.

By the way, also note my response to Cap'n Crunch for still one other rule that suggests a CB cannot be modified by a ham (Sec. 95.607 CB transmitter modification). This section would even prevent a person that was "certified" from modifying a CB (not a person with a grant of authorization or prior written permission from the FCC).

Search Result 12 From: Dwight Stewart (stewart@amouse.net)Subject: Re: Petition Filed With FCC View: Complete Thread (310 articles) Original Format Newsgroups: rec.radio.cbDate: 1999/12/06 Jeffmc3518 wrote:
>
> who gave ANYONE the authority to tell ANYONE
> what to do / not do with their private
> property?

Jeff, a person is absolutely free to do absolutely anything with his private property (radio) as long as it does not affect anyone outside of his private property. The person can use the radio as a paper weight, play football with it in the backyard, or use it for a hood ornament on his car.

But, as soon as that person starts transmitting, that person is no longer confining his activities to his private property - radio waves do not stop at his property line. At that point, society, through its elected government, has a right to have some say how that person uses the radio frequencies that belong to the society as a whole.

Our society, called the United States of America, elected a Congress to pass laws for the common good (not an individual's good alone - the common good). And that Congress created the Federal Communications Commission to make the rules affecting radio.

Now, if somebody does not like the way Congress works, he is free to change Congress. If a person does not like the FCC's control of radio, he is free to talk to his member of Congress. If a person does not like the rules that the FCC has created, that person can talk to the FCC. All of that is a person's right as a member of this society.

However, I can tell you right now that there is no way the FCC is going to expand the frequencies for CB, or increase the power allowed for CB, or increase the range that CB'ers are legally allowed to make contacts, or anything else. Why? BECAUSE IT DOES NOT SERVE THE COMMON GOOD.

Yes, all of these might benefit some CB'ers. But, for every CB'er shouting for increased power, there is another person complaining about interference from CB radios using increased power. For every CB'er demanding increased frequencies, there is another person complaining about the incroachment of CB'ers into their assigned frequencies. And for every CB'er shouting for increased range, there is another Cb'er complaining about the interference by people breaking the existing rules.

When Amateur Radio is added as an existing option that can meet all of the demands for increased range, power, and frequencies, there is absolutely no reason for the FCC to even consider a change in the existing rules. Now some may not like Amateur Radio as an option, but it is an option that serves the common good (even if it does not serve the good of the few individuals who don't like it). Therefore, it is the only option that a CB'er, unhappy with the existing Citizens Band, is likely to get under the current climate towards CB'ers.

> i don't hear anyone screaming about
> broadcast tv putting out more and more
> graphic sex, language and violence.

And, since you brought it up, if you don't like what is on television, complain to the FCC. That is your right as a member of this society. But bad behavior by a others in this society does not give anybody else the right to behave badly, nor does it minimize anyone else's bad behavior (in other words, bad behavior on television does not justify bad behavior on the radio).

And what would you do with the authorized users of these frequencies.
These frequencies (27.405 - 27.995) are used by the military
(operations, pulsed radar, etc.), the Coast Guard (hurricane emergency
nets, unit coms, icebreaker operations, etc), NASA (low horizon digital
telemetry), and many others.

And we've answered that question many times before, Jeff. Many of our
old friends still only have CB radios, so we keep our CB around to talk
to them.

> why do they have to come here and shove their views down our throats?
> if cb is so bad, why don't they abandond it for the holy grail, the ham
bands?

And we've addressed this also, Jeff. None of use has ever said that
CB is bad, only that there are some illegal users who make it bad for
everyone else.

> if they are going to come here, if they can't help someone, don't like the
> subject matter or if they don't have anything positive to contribute,
don't say
> anything at all.

When you apply those same standards to yourself, we'll follow your
lead, Jeff. You're the one in here ranting about ham operators. If you
can't help someone, don't like the subject matter, or don't have
anything positive to contribute, don't say anything at all.

> i may not know as much as some hams but i have gone to rec.radio.amateur
and
> answered some of their questions.

You know, you've said this many times. What do you want, a medal? So
what? How does the fact that you have answered a few questions in
rec.radio.amateur justify your continued assault on ham operators in
this newsgroup?

> i didn't always get the answers that i wanted or agreed with but
> they were friendly. here, if you ask a question about amps or mods, you

get
> someones keyboard shoved down your throat.

Now that should be rather obvious, Jeff. If you asked about amplifiers in the ham band, then you were asking about something that was legal (ham operators can legally use a linear). An amplifier is illegal in the CB band, so you're not going to get the same response from the ham operators here.

I'm also sure that you did not spend weeks conplaining about ham operators (like you do here) before you asked your questions in rec.radio.amateur.

> there was one poor guy here 2 weeks ago that asked a question about an amp.
> the flame thrower came out from one ham shack billowing threats of the FCC.
> if the ham would have looked at the guy's e-mail address, he would have seen
> that it ended in, ". UK".

I saw that message thread, Jeff. Yes, the question was from a guy in the UK. He asked about linears, which he admitted was also illegal in the UK. The CB'er with a ham license responded that he should consider other options, such as a better antenna or better radio.

The Cb'er with a ham license only mentioned the FCC once during his entire response. I would hardly consider that "billowing threats of the FCC."

By the way, I also noticed that YOU did not offer to help the person asking the question. You decided to attack the CB'er with the ham license instead. You made a big fuss about the FCC comment, but did not contribute anything that would have helped the person asking the question.

> not all hams are like this though. even some who disagree with the alternative
> cb life style. they are either neutral or helpful on antenna, power supply or
> in non-technical issues.
> this is all we ask.

Alternative CB lifestyle?? Now I have heard everything. What's next, Jeff? Are you going to march on Washington, hand-in-hand, demanding equal rights for your alternative lifestyle? I imagine that it is only a matter of time before you start claiming that you didn't CHOOSE to be an illegal operator, you were BORN that way.

MC, you misunderstood my message. I was not objecting to the facts -
I was objecting to your choice of words. The fact that certain people
pointed out to Ebay that it is illegal to sell amplifiers designed for
CB use, or that the ads would be reported to the FCC if they continued,
does not constitute an attack or a threat (you used both of these words
in your message).

And there is no evidence that it was anybody in this newsgroup that
contacted Ebay (a claim made in your message). Since Ebay has not
stated who contacted them, you are basing your claim, that it was ham
operators, on pure speculation - you have no facts to prove that.

> The thing that is bad about this is that
> this news group is for CB'ers. That's
> why its called Rec.radio.Cb. Why do hams
> come to this group and try to bash us and
> Cb?

I cannot speak for the other ham operators in this newsgroup, MT.
However, I continue to use a CB to talk to my friends that do not have a
ham license. And I use my ham radio to talk to my friends on the ham
radio bands. Therefore, I'm both a CBer and a ham operator.

As for your complaint about people bashing you, perhaps it is because
you post messages that based on wild speculation without any facts to
back up your claims. When someone challenges you to back up your
comments, your defense is to claim that they are bashing you.

You're fighting a losing battle, DP. When I had a CB years ago, it was one of the best sounding stations in the area. I could hear, and easily talk to, stations most could not. I received endless praise about the sound quality (thanks to a good, clean, microphone). And the station was totally legal (which seemed to surprise everybody).

Regardless of my endless lectures about the quality of the antenna and it's installation (height, location, grounding, etc), almost everyone in the area went with linears instead (and D-104 mics with echo, with radio modulation cranked to the max). Of course, these people could easily be heard, but half could not be understood and the other half could not operate most of the time because of complaints from neighbors. And still few of them could hear (receive) the distant stations in nearby counties I routinely talked to.

In other words, you could draw these people a blueprint of the perfect CB station, and they would still not get it. The lure of the bad boy image surrounding illegal linears is simply too much for many CB'ers to resist. The same with the need to fit in with the crowd (be like everyone else). For most people, both of these will outweigh "the right way" every single time.

Are you sure, Dave? Heck, I haven't done this in so many years, I probably could be wrong on that. Actually, I have not played around with RDF equipment since about 1977 when I was hunting down a "person" who was continiously playing music on the local CB channel.

Lately, I just drive around, watching the radio's meter, to find people on the CB band. I've got to get back into RDF though (on the VHF marine channels), so I guess I better study up. I'm going to build the antenna, but I seriously doubt it will be a loop.

I'd be a little careful making a statement like that, John. The FCC has been working its way down the radio frequencies over the last couple of years. First it went after the cellular companies. Then it hit the television broadcasters. Last year it went after the VHF/UHF bands. Now Hollingsworth is talking about increased enforcement in the 10-meter ham band.

If the pattern stays constant, we can expect the freebanders to be next. And then the CB band.

They may not have enough money to go after everyone at once, but they can target a specific segment, and a specific few individuals within that segment, to make an example out of.

I want a copy of this schematic also.

Yes John (OldCrow), I know it is cheaper to just buy a linear, but there is nothing like building, and using, your own equipment (especially if you have an interest in electronics).

Nathan, if you find one, how about sending a copy in my direction?

> from Cobra you know Copper's dosen't buy manufacturers refurbished
> equipment. We buy only new equipment!"

Well, Mr. Massie, I purchased a Uniden HR-2510 from Copper about two years ago and what I received was definately used merchandise. The radio had scratches on the case, the faceplate was scratched, the mounting bracket was bent, parts of the documentation were missing, and all of the screws were missing.
I considered returning the radio, but since the damage was relatively minor, I kept it. Instead, I wrote Copper a letter expressing my apprehension about paying for a new radio and getting a used item instead.
Much to Copper's credit, the office responded with a telephone call, an assurance that it was a mistake, an apology, and an offer for a replacement "new" radio. And indeed, three days later a new radio arrived.
Sadly, I had already modified the radio with the Chipswitch by the time Copper contacted me and I knew Copper would not take it back once it was modified. I returned the new radio and kept the modified used one.

Anyway, possibly incidents like this is the cause of these rumors
(about Copper selling used merchandise) spreading around.
To be totally fair to Copper (and to prevent new rumors), I have
ordered many times from Copper and am completely satisfied with their
merchandise, service, and customer support.
The incident above was the only time I have ever received used
merchadise. And I believe Copper assurance that this incident was a
mistake. In spite of this incident, I would still highly recommend
Copper Electronics.

.
Pick up a question and answer guide, spend a little time studying
and get your ham license. It will offer much more that cb ever
can. There is an entry class of ham license that does not require
Morse code, and the other classes only require 5 wpm of Morse
code, a speed almost anyone can achieve with a couple of weeks of
study.

You asked for it by posting in public. If you wanted no input you
shoulld have taken it to email.
****
>Well, actually you to said exactly what I >wanted you to I hope you
take your own >advice when Leland or someone else makes a >post and
interjects, and you suddenly say they >have some obsession with you.

Huge difference. Lelnad lies...I don't..someone needs to point this out
as several of you sorry ass hammies (certain noodes) share the same
agenda as Lelnad because you're not liked by real hammies and cbers seem
to have a magical effect on y'all.

>It also shows how much you value what I say >by answering me thanks for
playing. I can say >your obsessed with me as much as you Nad is >of you.

You are free to say whatever you wish...you're still wrong and it wont
make anyone believe
you.

>Just wanted to make that distinction.<

Well, as usual, youfailed.

>You said you only reply when your name is >posted.

No, YOU said that..I said I "ALWAYS" reply when my name is poseted or
addressed.
Lies and false attributions you can't seem to get away from..it's as if
you can't help yourself.....don't know any better..
****
>Are you that fucked up on drugs or in the >head? I said the exact same
thing you did >"you reply when your name is posted".

You must be taking the drugs, youngster.
You don't even know what YOU said let alone me...I'll spell it out for
you...you claimed I "always" reply when my name is mentioned.....NOT
what I said,,,you can't even paraphrase correctly...I said "only" and
you switched the word for "Always".

>You are such a pschopathic liar you accuse >everyone of lieing when it
is apperent that >there was no lie .

You're just too slow to follow and remember what you said....too many
lies you try to attribute to others makes you not remember...either
that, or like YOU suggested....drugs...stop taking them.

> it is actually comical to a point to think some >one can twist someone
elses words the way >you

YOU tried (and failed as usual) to change my words.....the "twist"
was your attempt, no one elses. Now run for more damage control.....

Return fire, nothing more.
****
>Ok I would call that trolling then. Wouldn't >you?

Not at all..but that is no surprise.

> And also hypocrisy on your part agin. heis >jamming was done as return fire

It's what he claims, and judging by his lies, we have to entertain the notion he is lying. Seeing what he does here, is called "actions". Words and actions are separate, yet you haven't been able to grasp this concept in years.

>yet the hypocrite you are says he is wrong. >Can't have it both ways twistsie.

He is wrong...no hypocrisy about breaking the law except rom his posts, claiming another lawbreaker justifies his lawbreaking, something you have harped and cried over for years.

The fact he is a hammie makes a difference?

****
>you made the distinction, I asked if he was<

Right...YOU made the distinction by asking.....it makes no difference to me or the law.

> since you were the one putting the label on<

I didn't claim he broke the law...he freely admitted being a federal criminal.

Then hammies should be held more accountable for their actions, by your Lelnad logic.....
****
>really how so give us an analogy then? <

The license, even a nocode, according to you, means respect, knowledge, effort, and responsibilities...with more responsibilities automatically comes accountability.

HAHhahhhahaahhahahahhahahahhhaahhahaah
Hahahah....as always, because we talk about it, we must be guilty. Better stay out of some of the alt. groups....you're heart couldn't take it...hahahahhaha
****

>Yes, you hold the hammies in this group to >that why wouldnt you hold >yourself to the same light?

Don't start lying just because you buried yourself again. I have never accused a hammie of freebanding merely because they may have chosen to speak of it.
****
>There goes twistsys favorite word lie, and here >he goes twisting what was said who is talking >about hams freebanding? Friggin douch bag >you are I am talking baout anything that is said >in general that you want to hold agaisnt Hams,

Such as? Id on't speak in generalities....that is the forte of you pompous girls....you feel it leaves you an escape route when called on lies.

>it is just all talk, right according to you, so what >dave said about jamming is all talk using your >Logic hahahahaHAHHAHA

Could be.

>If you are talking about it than either you did >it or are a liar >which do you prefer to be >called?

Your inability to even comprehend why that statement is so far removed from reality is plenty entertainment for me.
****
>twsitsy your posts are so far removed from >reality i think I am in the outer limits replying to >you.

And you are aware what the majority thinks about your input.

>>The final device that I made swept through >>all 40 channels. That was a
>>little more complex to make.
>>I guess it never occured to him to use his >>mobile. Good thing too, or
>>we would have had to risk attaching another >>device to his car.

"Another" device? To his CAR? You broke several laws, dintcha?
>>Sounds like you!<<

You, too. Dx and freebanding. But the fact you feel it justifies you breaking other laws is common among lawless sociopaths.

>>Not to the best of my knowledge. < <

Ignorance of the law is no excuse.

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.......you keep asking for excuses....
****
>>Well if thats the only answer your capable of >>giving.

You upset only because we discerned you not worthy of any reply on this matter.

If you so much as TOUCHED his car during such an act, a crime was committed.
>Cite it?<<

Criminal mischief. No go clean off.
****
>Not quite Twitsy he didnt do any damage to >the car, nor did he cause any threat of danger >this the statue directly from Pa the state he >and I live in. If I was his lawyer, that charge >would surely be dropped.
>try another.

Damage need not be proved.

http://members.aol.com/StatutesPA/18.Cp.33.html § 3304. Criminal mischief.
(a) Offense defined.-A person is guilty of criminal mischief if he:
    1.. damages tangible property of another intentionally, recklessly, or by negligence in the employment of fire, explosives, or other dangerous means listed in section 3302(a) of this title (relating to causing or risking catastrophe);
    2.. intentionally or recklessly tampers with tangible property of another so as to endanger person or property;
    3.. intentionally or recklessly causes another to suffer pecuniary loss by deception or threat; or
    4.. intentionally defaces or otherwise damages tangible public property or tangible property of another with an aerosol spray-paint can, broad-tipped indelible marker or similar marking device.
There might have been a grey area over the true intended use,

   No gray area.. You freely admitted
    you were doing it with an intent to jam, making you in violation of the FCC and what you consider federal law, which makes you a federal criminal (your words).

    First of all, in the years I have been here, neither have I seen claim anything concerning their hammie license, so it doesn't really apply or matter except to thugs like yourself.
                  ****

Secondly, both have constructively assisted those in need, and I have witnessed on more than occasion of Toll cleaning the clock of those that came in here spouting off something they read in a book with a chip on their shoulder.
****
>How would you know who's clock he cleaned >it is not like you understood what was being >said.

And therein lies the fun with you.

>He thinks he knows it all and continues to do >so on other forums and he continues to have >confrontations with other "Cbers" so what >does that tell you. But then agin Toll is a >Hammie so he is Good. LOL
>Are they hams when convienant or just when >it fits your agenda?

Ask them. Again, in almost 4 years I have seen neither say anything concerning hammies.
****
>Thats is not what the point is they are Hams<

Yea, you just can't get over that fact,,,hahahhahhaaah!

>and Illegal Cbers, so which would you classify >them as ?

I dont classify people..again..behavior exclusive to malcontents.

>If they did something you approve of perhaps >they are Cbers, do something agaisnt you >then they are Hams right?

People are people. The ticket means nothing. One day you may learn this knowledge.

Yea, well, it has the power of really twisting the psyche of some....hahaahhahahh!
**********]
>whats your excuse then? <

Always looking for the excuse..thats you.

It makes me free from the limitations I was suffering from, i.e.
bandwidth throttling, IP based authentication, and concurrent connection
limits.

The reason I got a little defensive is because I thought it was odd that
you posted a reply stating that "Upstream providers have dc'ed access
when complaints have fell on deaf ears to certain ISP's." While I'm sure
they have, I don't know why you felt it necessary to make that remark in
response to my putting a news server up. I took it as "He's warning me
that if I ignore complaints, the same will happen to me".

My appologies if I took it the wrong way.

Anyhow, enough about my new toy :)

Not at all and please accept my apologies if it came across as
such........enjoy your set-up. I mentioned the upstream providers only
because I have come across in the past (N8WWM's use of YNN) a company
(YNN) that did nothing concerning abuse until THEIR upstream providers
were contacted...once that happened, the offending account was
terminated in less than 24 hours. Have a gooder!

: when complaints have fell on deaf ears to certain ISP's." While I'm sure
: they have, I don't know why you felt it necessary to make that remark in
: response to my putting a news server up. I took it as "He's warning me
: that if I ignore complaints, the same will happen to me".

Alan, no need to apologize to him he meant it in a derogatory manner, he felt it necassary because that is twisty as noted by him saying "Serious sense of false security." He thinough you meant not having to worry about being TOSed by your ISP. Here is another lie by him to you,

"I just happened to mention how owning your own doesn't make you "free" from ISP limitations."

Now where did he say that to you ? Where did he imply anything close to that ? This is why he warned or threatened you, this is how he thinks and I quote him "when you make it personal and vioalte ISP rules,,,you're going down."

He saw your post and figured you were bragging about having your own newsserver, and couldn't be touched. they have complained about others who use this group when there complaints fell on deaf ears they went to the news feed provider instead of the persons ISP, who just laughed at them. You'll see what I mean you have already got a taste of how he Twsits words around , hence the name TWISTEDHED.

:
: My appologies if I took it the wrong way.

Save em Allan, youll thank me later

****
>>Even if he could read it he would twist the >>words around.

Hey, dave just proved what I maintained all along,,,now let's all sit
back and watch you attack the person because you have not enough
intellect to attack a point, post or topic..

The law doesn't have to prove anything when a confession is given of
ones own free will, unabetted.
****
>Another twisty Lie ... <

Not a lie, junior. I suggest you brush up on your law before sharing
your limited interpretation.

>>What's that like you admitting to being a >>freebander, fed criminal
on here?

Not at all.
Dxing and feebanding are not federal crimes..merely another in a long
line of comprehension deficits from those who are supposedly licensed
for that which they suffer the greatest.

The rest? Oh you mean the rest of your self-contradictions? Hell Dave, I
don't need to do as much,,,you serve up nicely.
that was sent to me by an upperclassmen who is familiar with your
hypocrisy. There are several of your posts that contradict
yourself......most recently,,,your inquiry as to what "slurp" was
referred to in your headers. Or your several accesss sites through,
around, and some that have nothing to do with Villanova U that you claim
don't exist.

>And I still claim that. I use ONE ISP, for all of >my internet needs.
>In the last month or so, they've changed the >news server over to a
>different machine.

Wanna split hairs? Forget the ISP. You have accessed this group by many
different avenues.

****
>You should know your the master harr dee >harr har ...

I am to you, chickenhawk..HARDEEHARRHARR!

Obey the TOS set forth by the company you choose to access the group.
****
>Now your insinusting you had his account >yanked?

Ask him to explain his many, many different accesses to the group if you're that concerned.

>a remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>That would've required trespass.<

Not if it's my yard. See, you suffer from this affliction and distinction of limited view...it somehow disallows all other examples in your limited grasp of things. But this isn't about me, it's about your hypocrisy and lies.
****
>Now your jamming yourself titsie? <

Nah.......a friend in Texas taught me how to do it in email and I checked to see what it was like. It was actually a topic and I emailed the person with an inquiry.

>you told him to put it in close to the guys home >not yours don't twist what you meant

I said no such thing. Your misattributions are quite endearing to me now....it shows how hard you try while failing consistently.

If you touched his car, as you claimed, with an intent to break another law (as you also claimed) you were guilty of criminal mischief.
YOU were the only one who mentioned trespass.
****
>Touching his car with intent means nothing >read the letter of the law stupid.

I'm not the one suffering here.
Interpretation and comprehension wasn't even a part of my world until I met so many incapables gathered in one spot.....all discontent impotent hammies in a cb forum attempting to harass cbers and they can't even do that right.

>Pennsylvania Consolidated Statutes
>CRIMES AND OFFENSES (TITLE 18)
>----------
>----
>PART II. DEFINITION OF SPECIFIC >OFFENSES. § 3304. Criminal mischief.

>(a) Offense defined.-A person is guilty of >criminal mischief if he:
>   1.. damages tangible property of another >intentionally,
recklessly, or by negligence in >the employment of fire, explosives, or
other >dangerous means listed in section 3302(a) of >this title
(relating to causing or risking >catastrophe);
>   2.. intentionally or recklessly tampers with >tangible
property of another so as to endanger >person or property;

There you go....recklessly or intentionally
tampering...the intent would be up to the judge to interpret, not you,
even though we know you fantasize about such power. Besides, if you, or
Dave, or ANYONE, was funnin' around one of my vehicles, you would be
begging for the cops. The dogs don't discriminate.

 "Another" implicates it wasn't the first time. And how do you attach
a device to a car without touching it? Did you lie or simply forget?
this may be your crowning monent, yet
****
>I assume<

A serious reason for you deficiency.

>touching the car is not criminal mischief >something more sinister
would have to occur

You would be arrested and it would be up to you to prove what your
intent was to the judge.

Depends on the legalities. Here I mention it only to illustrate Dave Hall's hypocrisy of calling me a federal criminal for freebanding and dxing over the years when he clearly went way beyond the realm of breaking FCC law than I ever had.

>Really? Operating a part 15 device, for the >purpose of ridding the CB band of a disruptive >influence and a source of interference, is >worse than operating on frequencies not >authorized by the FCC, with the potential to >cause interference to legitimate radio >services?

Certainly. Let us place it in proper context wihtout your undermind. You admit to intentionally jamming another operator. His actions are irrelevant to yours. I talk on a freebnad freq and you claim it has a a mere "potential to interfere". You are ludicrously failing at attempting to claim the act of jamming is more benign than the act of something that MAY jam.
See the dif?
Pretty ridiculous, even from you, Dave.

>I fail to see it that way, and I'm sure if you ask >an FCC official, he would likely not agree with >you either, considering the comments that I >got from the one that I ran into shortly after the >whole affair.

Not that again. The last time you told me to check with an FCC official, you had many excuses why I could not accept your challenge.
Besides, you have proved beyond a shadiw of a doubt, the majority do not share the way "you see it"...most recently and magnificently with your comments that all those cbers and hammies who have ever receieved a notice by the FCC for a radio violation are federal criminals. After that, anything you else you put forward is lost on account of your socialist views.

>Dave
>"Sandbagger"

Return fire, nothing more.
****
>Ok I would call that trolling then. Wouldn't >you?

Not at all..but that is no surprise.
****
Your right your a troll and admit your replys are troll

> And also hypocrisy on your part agin. heis >jamming was done as return
fire

It's what he claims, and judging by his lies, we have to entertain the
notion he is lying. Seeing what he does here, is called "actions".
Words and actions are separate, yet you haven't been able to grasp this
concept in years.
****
Here is that word again being throw around by a confirmed liar... Really,
how so my pathelogical liar.

Words and actions are seperate huh

The fact he is a hammie makes a difference?

****
>you made the distinction, I asked if he was<

Right...YOU made the distinction by asking.....it makes no difference to me
or the law.
****
Wrong! you are the one who made the distinction of him being a ham, by
calling him a ham so Ill ask again since you lied about who asked it, what
difference did it make to the law?

> since you were the one putting the label on<

I didn't claim he broke the law...he freely admitted being a federal
criminal.
****
It is all talk twisty remember, no one has done anything. You freely admit
to breaking federal laws then claim it is just talk, when some one calls you
a federal criminal, which you are, you balk and say "boo hooo but they were
only words" I didnt break any law it was NG banter, just guys talking . LOl

The license, even a nocode, according to you, means respect, knowledge,
effort, and responsibilities...with more responsibilities automatically

comes accountability.
****
According to me? You drunk again? when did I ever say any of the lies that you claim.

Putting words in mouth to fit agenda again. i see since I used that words yesterday you have now stared to use it Can think for yourself can you.
schelp

Could be.
****
yet you call him a federal criminal based on what he said? You cry when your called that, why the double standard?

And you are aware what the majority thinks about your input.
****
No, I am not but I don't care what people think

>>Then what is your excuse for continualy >>breaking laws?

Here we go again.....you keep asking for excuses....
****
>>Well if thats the only answer your capable of giving.

You upset only because we discerned you not worthy of any reply on this matter.
****
You running out of excuses again?

If you so much as TOUCHED his car during such an act, a crime was committed.
>Cite it?<<

Damage need not be proved.
****
Sorta like all your accusations. You haven't a clue about lawyering.

Lets go down them 1 at a time

Offense defined.-A person is guilty of criminal mischief if he:

1) Where is the damage by touching the car? fire? expolsive? Nah you lose next
2) touching the car doesn't endanger person or property Next
3)touching the car doesn't cause pecuniary loss by deception or threat , Next
4)touching the car ? dont see any spray paint, or aerosol cans

Judge: Not Guilty

http://members.aol.com/StatutesPA/18.Cp.33.html • 3304. Criminal mischief.
(a) Offense defined.-A person is guilty of criminal mischief if he:
1.. damages tangible property of another intentionally,

recklessly, or by negligence in the employment of fire, explosives, or other dangerous means listed in section 3302(a) of this title (relating to causing or risking catastrophe);
2.. intentionally or recklessly tampers with tangible property of another so as to endanger person or property;
3.. intentionally or recklessly causes another to suffer pecuniary loss by deception or threat; or
4.. intentionally defaces or otherwise damages tangible public property or tangible property of another with an aerosol spray-paint can, broad-tipped indelible marker or similar marking device.

And therein lies the fun with you.

Yea, you just can't get over that fact,,,hahahhahhaaah!
****
why would I need to get over the fact that they are Illegal Cbers as having a ham license. I won't call them hams

I dont classify people..again..behavior exclusive to malcontents.
****
Another bold Face lie, LOL you have classified all hammies and nocodes LOL

People are people. The ticket means nothing. One day you may learn this knowledge.
****
Oh my deranged friend I already know this and have pointed it out to you many times in fact in this thread, re: toll and jay, they both have licenses yet are Cbers,

Always looking for the excuse..thats you.
****
yes your full of them since you can't take responsibility you give excuses I am just waiting for your next one.

Only for you? Only in your area?

>How many other people do you know that use >my particular news server?
I'd venture to say >that they number less than the number of >fingers on
your hand.

Which server? Posts I have seen by you are from several.....many
even.......

>I don't know how that reflects in the message >headers, but I use it
>the same as I always did.

Wanna split hairs? Forget the ISP. You have accessed this group by many
different avenues.

>No, I haven't.<

I'll hold that one.....you can always claim "By golly ah guess ah
did....fergut abote that thar won!"

You look too hard for things that aren't there.
Try reading only what is there and not what your unpopular views limit
you to.

>But suppose I DID use a different ISP, what's >the difference, I use my
real name, and my >E-mail is still the same. Unlike you, I have no >need
to conceil my identity.

Identity? What does identity even remotely have to do with anything?
You're in cb land junior, and cb don't use propers.

>I can't be responsible for the hardware >changes that my ISP does.

Sure you can. Obey the TOS set forth by the company you choose to access
the group.

>What rule have I broken?<

Dunno.....why have you had so many separate accesses?

> What, I'm not allowed to express an opinion? >That's too bad for you
if that's what you think.

You have demonstrated a preponderance for not knowing what the majority or I think.

>And I still don't understand the meaning of the >term "slurp"......

Look at your current header. Quite different from at least 5 or 6 others, and that's just what was sent. there's probably more.

>Maybe my newserver has a dynamic routing. I >don't know. I'm not a pencil-necked internet >geek, so I really don't know the nuances of >each and every routing protocol.

Really? You mean someone was forging you whwn you were attempting to educate another and bragging on your computer prowess abilities?

See, besides trying to take your advice
concerning asking the FCC agent, I was also taking your advice as to not believe everything I was sent....so I admit, that claim had me curious, so I went and looked for myself. Are you still in business?

>I was never seriously "in business". Two other >local guys had a dealer franchise,

A franchise? You now claim your little business was a franchise and that it belonged to others..is that what you are attempting to say, Dave?

>No, I'm not "attempting" to say anything. I'm >TELLING you, straight up, that the "business" >was a side line operated by two local friends >of mine, and that I did repair work for them. I >made NO money from the sales of radios.

So you were the legit "employee kept in the dark" of an otherwise illegal operation...hahahhahaha..classic fiction textbook example. Now mention one person in this group you feel believes that.

>and sold radios to the local guys. I was the >guy who did the repair work.

Why would a mere tech use the business as his sig?

>Uh, as a way to drum up business?<

Why? You already claimed in one post you made no money and in another you claimed you had puh-lenty of business.....damn..you're off and running in record time this time.....ggod thing you have 2 nocodes lapping at my heels to attempt redirects from such self-contradicting posts, hmmmm?

> I was the only one on the internet at the time, >and thought it might be a way to expand our >operation. Nothing sinister there.

No Dave, you claimed it yours.

>Where? Prove that one. I never did any such >thing.

This is beginning to be quite fun..you lie, and I show otherwise. No wonder Frank hallucinated he invented a "twistybuster"....worse yet,

Dogie and Lelnad each bought one.

>And once again you fail to properly >comprehend what you read.

Not at all.
The fact that you feel anyone at all would believe you had no concept of the business
isn't difficult at all. The fact that you feel anyone would believe you were not involved in illegalities when your posts at the time clearly contradict and indicate otherwise, is
more of your arrogance manifesting in the way you view the majority of this group.

>I NEVER claimed that the business was mine.<

Like George likes to say, "that isn't MY crack in my pocket, officer"..nyuk nyuk nyuk...what's good for the goose...ya' can't have it both ways!
It was YOUR name as a sig with the business name and phone right below your name. Your attempted dishonesty at this point in time continues to make all aware of your character traits,,,right there along with your arrrogance in believing anyone would believe anything less than the truth. Talk about a dance and a song..hahaha!

We'll keep that around for awhile to resurrect at the right time.

>Now would be a good time.<

Nah,,it's always fun to watch you regurgitate on your own claims when caught in lies with "I fergote abote that verbotten one!"

>It wasn't much of a "business" anyway. We >only worked the local crowd. >I never made enough money to call it a >primary job. It was my "radio slush fund", that I >used to buy more of my own gear.

>Hell, I've been repairing radios since I was 15. >I paid my first car's >insurance and kept the gas tank full from the >proceeds of my ventures. >And believe me, I saw my share of "clip and >peak jobs, gone horribly wrong", in my day. I >spent most of my time, making borderline >unstable >radios like Galaxy's, who had already seen the >screwdriver, operate with some stability and >cleanliness.

Oh really Dave? Is that when you were only the "repair guy" for the business? Once again, your posts show you did quite a bit more than "undo" Galaxies. Blow your bullshit somewhere else, Dave. You're all washed up here.

>I've been "in the business" of reparing radios >since I was 15, as a sideline. I was associated >with the particular business in question for >only about 2 years, back in the 1995 time >frame. I operated independently, my name >was listed nowhere in this dealer franchise.

Wrong. You posted the business name and phone number as part of your sig. with no mention of "other" guys anywhere in any of your posts. Is

the phone number still valid? Was it your phone number at your house?

>Yep. That's why I have such a keen insight >into the situation.

Once again, you fail to see yourself as the masses. Your insight is far removed from the popular majority as evidenced in your maintaining dx constitutes a federal crime.

>Well does freeband DX violate FCC rules? A >yes or no answer is all that's required.

Pigeonholing doesn't work and I have never allowed it, hence the "Aarons dogs" humping my leg.

>but if you knew this guy, you wouldn't be >defending him

I am not defending him, rather you are using him as a justification for your lawlessness.

>You can't prove that I broke ANY law. Your >opinion of what I did is irrelevant.

See? You continue to learn, grasshoppah!

Well, you claim I was one for disrespecting the mundane laws of dx and freebanding. Yet you had the illegal hack shack and somehow view yourself above that of a simple freebandng dxer...hahahhahahah...keep on keeping on....!

>The difference was that I was at least >attempting to correct some >really BAD advice and modification work,

With "better" mods? What makes your mods better? Hahhahha! Pure bullshit, Hall. As I stated, the funny part is, I wanna know who you think believes any of it?????????? Hahhahhahhah!

>whichresulted in a cleaner radio signal.

You also were involved in illegal sales.

>You assume way to much and have no proof.<

Correct. I assumed such a stance because your posts are chock full of such matter back then.

>First off, you don't know what we sold. <

Again, correct. Your posts could all be lies.

>It's perfectly legal to sell type accepted radios >to people. Why would you assume that the >business sold anything else?

Are you saying you didn't, Dave, sell any illegal radios? A simple yes or no will do.

>secondly, I was not involved in the sales end.<

Hmmm....so those posts alluding otherwise was just to "drum up business" that you weren't really involved in, didn't make any money at, and did it as a community service....(ROAR)!

>I only did the repair work.<

I was just taking a package officer, honest, I didn't know what was INSIDE!

>Something else that you have no evidence to >the contrary.

Freely admitted, grasshoppah. See how neurotic your claims of "FEDERAL CRIMINAL FEDERAL CRIMINAL" are!

>You, on the otherhand, operate either >oblivious of, or indifferent to, the potential >interference that you may create, while >chasing your DX.

Keep chasing rainbows.

>If you consider the plain truth a "rainbow" it >underscores how truly confused you really >are.

Merely shows how little you know. Your brain never has managed to catch up with your motor mouth.

Remote car control, huh? Those aren't hard to make,,,,all you gotta do is
buy one and, well, I have a friend in Texas that perfected this a long, long time ago.

>A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>That would've required trespass.<

Not if it's my yard. See, you suffer from this affliction and distinction of limited view...it somehow disallows all other examples in your limited grasp of things.

>We're not talking about YOUR yard, we're >talking about the guy who actually got the >device planted.

Poor side step,,,you have done better.
You made the incorrect statement that it is oly good for one channel and I corrected the statement. You, realizing you lost more face and even more credibility (is that even possible?) an ran back to your personal example. Nevertheless, your statement is incorrect stating it only works on one channel.

>soIn his case, planting a device a few yards >away WOULD have required trespass. The >fact that you live on a postage stamp sized >yard doesn't mean the rest of us do.

Yea? You ain't allowed to have multi-animals or livestock on "postage sized lots", so keep reaching.

If you touched his car, as you claimed, with an intent to break another law (as you also claimed) you were guilty of criminal mischief.
YOU were the only one who mentioned trespass.

>the device was part 15 covered.<

If you so much as TOUCHED his car during such an act, a crime was committed.

>We never had to. <
>we planted outside of his yard. Duh! You really >are dense aren't you? We never went near his >car. But if we did, we would have had to make >"another" device to plant on his car the "first" >time. Get it yet?

The only thing I get is what everone else "gets": your pathetic attempts at cleaning up your fecal trail.

> I really hate having to talk to you like I talk to >my 3 year old daughter.

he recogizes her father's limitations, too?

>Sometimes I think she understands better.<

Compared to you she does...after all,,,she lives with her mother, thank God.

>Dave
>"Sandbagger"

"Another" implicates it wasn't the first time. And how do you attach a device to a car without touching it? Did you lie or simply forget? this may be your crowning monent, yet

>Actually, this is your crowning moment of >comprehensive ineptness. Yes "another >device" means a second device after the first >one that we planted outside of his yard. Duh!

Hahaha".DUH "is right...another stupendous example of faulty conveying of your message read: communication) by one who is allegedly licensed..hahhahah...your orignal quote says nothing of sort,,,in fact, you may need reminded of what you said in the future.

>You really are dense aren't you? We never >went near his car.

Then why was it even mentioned? Hahahhah!

I was waiting for my Dad at the Dr's office this afternoon, so I sat in the car idle tuning around the
12, 11, and 10 Meter bands. On 27.555 there was a guy playing music (4:30PM EST), another
one saying over and over "Canadian High Power, Canadian High Power" then singing (if you could
call it that) the same phrase, another throwing carriers, and a conversation in back of that. Truckers were on 26.025, Spanish on
26.625, truckers again on 28.085 and interspersed in 10
Meters all the way up to 28.735 AM. I got on SSB and began to call CQ on 735, the truckers
fussed about it and moved off. Hmmm, 27.555 sounds just like the CB I know.
Jerry

So? The fact that so many populate such freqs show quite a demand for such type activity. Only tightasses have a problem with something that doesn't effect them and only serously disturbed people go where everything they hate is located. Can you say sadist between those tight cheeks?

From: "Dave VanHorn" dvanhorn@cedar.net
High power dosen't help in DX, on CB or 10M, when the band is closed,
it's CLOSED. When it's open,
5W will do the job.

What have you been smoking????
Power doesnt help in DX???? What bullshit! A stock radio can get thru on
a clean freq (they dont exist) but add 100 watts and see a major
improvement...add
300 another big gain...add 600......etc
I agree when the band is "CLOSED" running even kilowatts wont make a
diff. 5 watts???? You wont even be heard....you will be squashed! If the
29 has been peaked you will need to know what the output is both dead
key and max out. A high drive amp will work fine with the 29 but most
generic HD Palomars are said to be max input 12 watts. You cant run a
competition amp (Davemade, Xforce etc) without a very low dead key...2-4
watts MAX. I would suggest learning more about your setup and how it all
works together and how to optimize the setup...then if you wish try an
amp and know how to use it. Xforce amps are not biased unless you pay
for the mod. However, this is not a problem on SSB as you simply roll
the modulation back and they work fine. I laugh at the 102 whip
idea...not possible for most vehicles... pick up a decent whip with a
length of 5 to 7 feet with a tunebale tip....that'll help your receive
and transmit. Try using about 13 foot of coax....get the SWR tuned
right...you may decide to keep it the way you have it...but i doubt
it.........

Not as much as I could be, I suppose. I'm always on the hunt for good concert bootlegs. Somehow, I like the sound of a concert recorded by two dunk guys with a tape recorder. I'm strange, that way :) To that end, I like alt.binaries.sounds.mp3.bootlegs.

I'm not carrying any binary groups at the moment. Just the rec.radio.* hierarchy. I'm currently working on a strategy to manage the incoming feed bandwidth so as to not beat my T1 to death (I'm not the only one who uses it). Also, I don't have the hard drive space on that server to store the binary groups for any reasonable amount of time. That's an easy problem to fix, the former is not.

Here's a little trivia info for ya: When I called my provider to establish the feed, I said "Hey, you guys aren't going to try and send me a full feed are you?". The guy laughed and said "Heh, no we learned not to do that unless the customer REALLY wants us to". As it turns out, a full on usenet feed is about 120GB per day (!!!). My T1 isn't fast enough (1.5 MBit) to grab all the articles posted to USENET in a 24 hour period. In fact, to receive a full feed he suggested at least 6 MBit of bandwidth. Expensive. Many sites have a few servers that ONLY accept incoming feeds (no clients connecting) and then those intermediate servers feed the servers that the clients actually connect to. It's amazing. My provider actually sends me my feed from 15 other servers. Each of them (one at a time) open a streaming connection to my server for about 3 minutes or so, during which time articles trickle in as my provider receives them. Then the connection is closed and another server connects and repeats the same process. It's entertaining to watch the logs live while this is happening (OK, entertaining if your a geek).

I'm just a little small time operator. Kinda like my little 4 watt CB :)

I would never try to discredit Aaron Voobner. He's done that well enough by
himself.

His name is not Aaron H. Voobner, although he claims it really is.
He is not a ham, so he shouldn't be overly concerned with 10 meter
intruders.
He is not a CBer, so he shouldn't be overly concerned with illegal CBer's.
He stated that 10 meter radios are illegal for 10 meter use, and claims that
he never said that.
When someone asks him a question, he claims it is a personal attack.

How can you discredit someone with no credibility?

I just installed my Cobra 29 in my 79 Trans Am. I have very high quality coax with soldered Amphenol connectors and a Wilson 2000-T antenna on the trunk lid. It's got a good ground too. The thing is, I've never had an SWR as low as I'm getting with this setup. It moves just a little bit on 1 and 40 but not much. That is without any trimming or adjusting, just installed it as is and got damn good readings on the meter. Now, Just to be sure, on the Cobra 29 NW/ST/WX, when you adjust SWR you set the switch to SWR and key down. Please tell me I'm not supposed to use the S/RF setting, and I know it's not CAL...that's for calibrating the needle. So what's going on, did I just get lucky setting it up just right, maybe I didn't get a good ground on the other vehicles I've had it installed on?

>Hmmmmmmmmmmm. Looks like there's >going to be some disappointed
demagogues, >uh er, I
>mean Democrats. I thought everybody was >sayin' how the Reps were going
to lose the >House.

Nope...just the next presidency....watch the economy now....it will sour
and you'll blame it on the last democratic incumbents. Won't matter
though, a sour economy will be worth tossing out the Bush clan no
matter who gets the blame....as you know, historically, the people
always vote the economy. He's gone.

Economy? How come they didn't do that THIS time? This is the FIRST time
ever that a
sitting President's party didn't lose seats in Congress during mid-terms.
Even Clinton lost some
during his waning moon. Nope, I think you are mistaken about George Bush.
The fact that the
Reps GAINED instead of losing is due, in part, to George's aggresive
campaigning on the parts
of Republican candidates and his continuing popularity. Another thing is
that the Democrats lack
that sense of purpose that unites a party behind a common cause. The Dems
were/are in disarray,
they have alienated themselves, even among their own, by playing partisan
politics with Bush nomi-
nees, and by taking the party WAY too far to the left on such things as
partial-birth abortion, gay
rights and other issues that Mr. Average American just is not comfortable
with. I'd even go so far
as to say that they have taken on narrow causes and forsaken the broad base
of working people they once feigned to protect and serve. Those
Joe-in-the-street types, traditionally Democrat,
blue-collar workers will only allow themselves to be pulled just so far to
the left of center before
they will rebell. Gone are the days when people will automatically toe a
party line just because
Senator so-and-so said to. The media and instant access to news and
opposing views have taken
care of that.

We could argue that on and on, but I would, unless something changes
drastically, lay odds that

Mr. Bush will be re-elected; he IS extremely popular, he is a down to earth sort, and his handling
of 9/11 has our patriotism and guard up. It may be, indeed, that that event just luckily fell into his
lap. Really, the thing, rather mistake, that got his Dad was the fact that he made that "Read My Lips--NO New Taxes" gaffe and then reneged on it. It was a HUGE error. People would not forgive that inspite of the Gulf War success. His son will be with us, I predict, until 2008. And I sort of like it that way. Trusting our National Security to a flamin', bleedin'- heart liberal makes me
extremely nervous. Their rose colored glasses get in the way of their judgement when it gets to be
ass-kickin' time. <<g>> Somebody like Mondale handling our Nation in time of war makes me
shudder!

> Star...they can take a pounding in a truck.

First of all, I got the Coax from a local CB shop, it's got soldered
Amphenol connectors and is 18 foot in length. Also, I just installed
everything today in my TRans Am, and number one, the CAL setting will
not let the needle swing all the way to the right under the little V
marker. I'm also getting very low SWR on all channels. I'm wondering
if the peak and tweek had anything to do with the calibration issue,
or if the SWR meter in the radio is just f-d up. Any ideas. If my SWR
is really that good(reading 1.1-1.3), I'm not gonna scrwe with an amp
for now, especially considering the fact it's already peaked...hmmm,
I'll just buy a new radio and get a TStar and play around with em, see
what I can make em do.

633. gmrs usage

Does any one know for a fact (rather than just having an opinion, I've got plenty of those myself :-)) whether a GMRS license allows you to talk to any other GMRS licensee, or just people operating under your license?

I've gotten into an argument over it, and part 95 is not being helpful, honestly. Reading 95.1a, 95.3, 95.21, and 95.181, all seem to pretty clearly state that a license allows the licensees, and designated people inside the family (I'm talking the current individual licenses of course, not a legacy business license) to operate a given gmrs "system", i.e. a set of units, and to communicate. It seems to only allow you to operate within that "system". Unless you're having a 95.181(d) emergency. The one place that opens it up is 95.101(a), which does state that a "GMRS license authorizes a GMRS station to transmit to other GMRS stations at any geographical location within [us control]" But, even then, elsewhere stations have been defined as being units with an system.

Basically what we're trying to decide is whether it's legal for a pair of fully licensed families with GMRS units to talk to between the families on a joint outing, say, if we went to, oh, Disneyworld or anyplace where operating at GMRS power rather than FRS levels might be necessary due to distance or terrain. We could clearly do that legally under FRS laws, but, then, we'd be at FRS power levels.

> "ET"

Hey Jason,

You're checking it right, assumming that you calibrated the meter
correctly. You didn't mention how you went about doing that, so I can't
make any assumptions. Move the switch to CAL, adjust the calibration knob
until the needle is over the cal marker on the meter, move the switch
over to SWR and note your SWR. If you did all of that and it's low, it's
pretty safe to assume that you're in good shape. If you're in doubt, you
can always cough up $30 bucks for an external SWR meter. I'm sure that
many folks trust that over the one internal to the radio.

BTW - I have a Wilson 1000 mounted on the roof of a 2000 Dodge Neon. I
set the whip all the way down in the hole, tightened the set screw,
checked my SWR and noticed the same thing you did - Nice and low SWR
across the entire band.

To the group: I'm assumming that these particular Wilson's are quite
widebanded, perhaps at the price of resonance. Perhaps somebody can
correct me if I'm wrong, or provide further clarification.

Well, for one thing, neither of them know that amateurs are exempt
from type-acceptance requirements. One would think that any licensed
amateur operator would know that, but neither of them do. I guess they
can just make it up as they go along?

Sorry for butting in in a group I don't normally post in, but your subject attracted my attention...

Those stats are a bit behind the times. Usenet news feed volume doubles roughly every year. It's hard to quote feed sizes because it changes so quickly. It passed the 500GB/day point last month and is more like 525GB per day now. You can't even get a full feed over a T3 anymore, you need more like 75 Mbits of bandwidth now. It hit the 100GB/day point for the first time back in Dec 1999 if my memory is correct.

Here's a nice page of recent stats from one server to give you an idea of what news volume is like for a full feed:

http://newsfeed.visi.com/

The cool thing about usenet is that the huge volume is mostly the binary groups. If all you want is the text articles, you can get a full text article feed and only take up a few hundred Kbit of bandwidth (less than a typical DSL line) and run the server on any old small PC. So anyone that wants to spend the time and has the right type of network connection can easilly afford to set up their own personal usenet site.

The answer is yes. The license gives you the authority to transmit. Anyone
can receive. The only restriction is that you don't talk to
furiners(foreigners)

:
: Tom

Tom your not Amish are you , just kididn. I can't believe that. The groom does remove the garter from the bride, he is then the one to throw it to all the "single" guys in attendance, who like I siad catch it then await the female who catches the boquet. Funny part is this is usually the best part of the wedding reception, you hope for a "couple of players", you know 2 people who are 1/2 shitfaced so she might let him put it all the way up her thigh. I must say it does get quite good at time. Every wedding I have ever went to did this so i just expected them to all be like that. perhaps it is an east Coast thing.

Wow. Absolutely unbelievable. Maybe I will consider a full (non binary)
feed. It shouldn't tax the T1 too hard. The thing is, I wonder why the
news guy at UUNET told me 120GB a day? I hate getting (and subsequently
posting) incorrect information.

Hey, thanks for filling me in. I appreciate it! :)

> Does any one know for a fact (rather than just having an opinion, I've got
> plenty of those myself :-)) whether a GMRS license allows you to talk to
> any other GMRS licensee, or just people operating under your license?

Let's look at your statements and at the Regs.

>
> I've gotten into an argument over it, and part 95 is not being helpful,
> honestly. Reading 95.1a, 95.3, 95.21, and 95.181, all seem to pretty
> clearly state that a license allows the licensees, and designated
> people inside the family (I'm talking the current individual licenses
> of course, not a legacy business license) to operate a given gmrs
> "system", i.e. a set of units, and to communicate. It seems to only
> allow you to operate within that "system".

Sec. 95.1 The General Mobile Radio Service (GMRS).

(a) The GMRS is a land mobile radio service
available to persons for short-distance two-way
communications to facilitate the activities of
licensees and their immediate family members.
Each licensee manages a system consisting of one
or more stations.

So a system is defined as one or more stations.

Sec. 95.23 Mobile station description.

(a) A mobile station is one or more units
which transmit while moving or during temporary
stops at unspecified points.

So a station is one or more units. I guess the issue is back in 95.1; I
read this as saying that GMRS is used to facilitate the activities of
licensees. Oh, and since family members are permitted to be station
operators, we can facilitate their activities as well. (95.179(a))

But let's look here, too:

Sec. 95.101 What the license authorizes.

(a) A GMRS license authorizes a GMRS station
to transmit messages to other GMRS stations at any
geographical location within or over the territorial
limits of any area where radio services are regulated

by the FCC. These points are listed in Appendix A.

So a licensee can transmit to other GMRS stations. A station is one or more units -- no restriction to family members; see 95.23 excerpt above.

> Unless you're having a
> 95.181(d) emergency. The one place that opens it up is 95.101(a), which
> does state that a "GMRS license authorizes a GMRS station to transmit to
> other GMRS stations at any geographical location within [us control]"
> But, even then, elsewhere stations have been defined as being units
> with an system.

Read that again -- tell me why you think it's limited to _family_members_. 95.101 doesn't use unit or system. A licensee manages a system consisting of one or more stations; a system is one or more transmitting units used by station operators; a station is one or more units which transmit; a station may transmit messages to other stations.

>
> Basically what we're trying to decide is whether it's legal for a pair

> anyplace where operating at GMRS power rather than FRS levels might be
> necessary due to distance or terrain. We could clearly do that legally
> under FRS laws, but, then, we'd be at FRS power levels.

Where in the regs do you find the prohibition. It does _not_ say that licensees may communicate only to their immediate family members. You say, 'It seems to only allow you to operate within that "system".' I don't see that anywhere in the regs.

Yes, you can talk to any licensed GMRS operator. You can also talk to
any FRS radio user on the interstitial frequencies (FRS channels 1 -
7.) The FRS user does not need a license to talk to you but you must
ID as required.

GMRS base stations can also talk to each other. This was not allowed
in earlier rules but that prohibition has been eliminated.

Mike

Really? A no code tech (at least in my area) can link into a 10 meter port on a 6 meter, 2 meter, 220, 440, or 1.2 GHz repeater. I've used it from a 440 port. Instant worldwide communications. As far as the higher classes of licenses, um ... there have been very young kids passing those exams. What was it? An 8 year old extra? Yep, those tests sure are designed to keep everyone out, huh?

We've now added all our crystal charts for free download/printing (PDF) on our site. These 32 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

>The answer is yes. The license gives you the authority to transmit. Anyone
>can receive. The only restriction is that you don't talk to
>furiners(foreigners)

You got the right answer but with the wrong reasoning.

Except for emergency situations and certain paging operations,
one-way communications are not permitted in GMRS.

HOWEVER, the rules have always been interpreted to permit
intercommunication between stations, not restricted to those
stations within a single system, if the message content is
related to the personal business of the licensee(s).

The rule wording is a bit confusing for someone who isn't all
that familiar with how FCC rules are interpreted, but that's
the kind of stuff that I do for a living....piece of cake.

One more problem I forgot to mention. I set the meter to CAL, but I
cannot get that needle to swing under the V marker. The calibrate knob
will not push it over there. Any more ideas?

678. CITIZEN BAND EQUIPMENT FOR SALE

Newsgroup: rec.radio.cb
Date: 2002-11-07 04:19:59 UTC
From: Nighthawk <miner1@flash.net>
Message-ID: <PRIy9.6267$p_3.3739@newssvr19.news.prodigy.com>
Source record: 143264

CITIZEN BAND EQUIPMENT FOR SALE

All prices are not including what it will cost me to box it up and ship it to you, so I will need a name and address to figure the correct amount. If I have a box on hand the right size you are only looking at shipping cost. If you live close by (Moore, Oklahoma) you can just pick it up. If you have questions about a specific item please e-mail me at nighthawk111@juno.com

Citizen Band Base Station

1 Browning Mark IV, 40 Channel, AM/SSB, base, complete with 776 microphone, in great working condition. It is looking for a good home. This is a clean unit, and a great investment, because they are not making any more of them. Price $500.00

Citizen Band mobile Radios

1 Pace 8025, 40 channel CB, has Public Address system, Meter, TX and RX lights, Meter. No microphone or mounting bracket. Price $35.00

1 Kanal Twin Mod 2001 AM/FM, no microphone, or mounting bracket
Price $35.00

1 Midland 150M, 40 channel CB, I hooked it up and it lites up, I do not have a microphone that is wired up for a midland, so I could not test this one out. Includes microphone no end, no mounting bracket. Price $10.00

1 Sharp CB-2460, 40 channel, with mounting bracket, no microphone. $30.00

1 Motorola Mocat 40, with microphone. $25.00

1 General Electric 40 channel, PLL system, no microphone, or mounting bracket. $25.00

2 Johnson, Messenger, 123SJ, 23 channel, no microphone, or mounting bracket. $20.00 each

1 Browning, Brownie, 23 channel, no mounting bracket, with Diesel microphone. $ 35.00

1 Browning, Brownie, 23 channel, no mounting bracket, with Browning microphone. $45.00

Coax

100' Belden, 9880, IEEE, ISO, 8802.3, 50 ohm, double shielded cable. NEW
Price $50.00

Antennas

2 NIB catalog # W-RM, Roof mounted CB antenna complete with mounting hardware and cable made by Ward Electronically Engineered Products. Price $15.00 each

1 NOS (new old stock) Super Scanner Antenna Citizen Band directional antenna made by Antenna Specialists. This antenna has never been used. It is still in the box ready to be
installed. This is a great antenna, it is a beam that you don't use a rotor to operate. The switching of different directions is all done by electronics in your shack. Price $300.

This equipment is sold as is, Most of this equipment, I have not had the time to test it out nor do I feel I will have the time to test it out. If it has been tested it has been noted in the description.

If interested e-mail me at nighthawk111@juno.com

> news guy at UUNET told me 120GB a day?

Hard to say. But it's very comon for people to think they know the feed size but they were told the information from someone 4 months ago and didn't realize how fast it changes, and the guy that told him had heard the number a month before that from a guy that read it off a web page that hadn't been updated in a year but was written as "the feed is currently X" so he assumes it's still valid since it's on an internal UUNET support page, etc.

The techs at UUNET that help interface with customers typically only know what they need to know (i.e. how to use the internal systems to activate the feed), and aren't the people that actually run or support the news servers, so they just aren't current on the feed size. You can tell how out-of-date they are by the number they quote you. :)

Well, it depends, but basically of course you get TOSed by violationg my TOS. :)

If you go to my web site and click on the sign-up button, that takes you straight to my TOS page, so you can read it if you care.

My TOS are somewhat more vague than most, and because I'm mostly a one person company (mostly because my wife helps out from time to time), I don't have to set up formal guidelines for an abuse staff. If someone is causing problems, I tend to spend more time working with both sides of the issue to try and get things fixed instead of just kicking someone off the service first and never asking questions.

If someone is doing something wrong, I try to educate them on what's right. If I feel they knew what they were doing was wrong and don't care, they get TOSed fairly quickly. If they are slow learners, I try to work with them.

Mostly, however, my philosophy is that if you are doing something that prevents Usenet from functioning, you have corossed the line, and will get TOSed. That includes stuff like flooding usenet with posts, or intentionaly trying to force people to read your posts by changing your From: address on every post, or putting subjects on your posts with the intent to decieve, etc.

I don't tend to care too much about group "charters" either. I would never TOS a user because he posted one message in viloation of a charter or "Posting FAQ" for a group. But if any of my users continued to harras a group after given multiple warnings not to do it anymore, I'd TOS them.

Mostly, I don't have formal guidelines for when someone gets TOSed. Mostly I just find the best solution I can to problems as they show up.

Jason,
That sort of changes things. If you can't calibrate the meter,
it just isn't going to read correctly. That being the case, I'd
certainly take another look at things, 'cuz something isn't
'right'.
Has the radio been modified at all?
'Doc

Source record: 143280

Bert,
A 'Zepp' is a 1/2 wave antenna. An 'extended Zepp'
is a 1.25 wave antenna. Neither has much to do with
a 0.625w or a 0.640w antenna.
'Doc

Bert,
But when you cut them in half, they aren't a
Zepp, or an extended Zepp anymore. That would be
like cutting a 1/2 wave dipole in half and calling
it a 1/2 wave end fed dipole. If all you were doing
was changing orientation, what you're saying would
be correct. But you're not changing orientation,
you're changing the basic structure of the antenna.
Sorry, just ain't the same thing...
'Doc

Thanks. Gee, we'd just happened to say to each other "You know, probably the only one who could tell us for sure would be a lawyer" :-).

Although that brings up a parallel concept. If a bunch of us, each with our own individual licenses (or at least one per family) all volunteer at something (parade, sci fi con, something like that), where we're not employees, is it a legitimate non-business use to talk to each other about what we're doing?

I guess what was confusing was that licensees managed systems of stations,
and under the section on what the license allowed it talked about supporting
the personal or business activities of the licensee and the people using
the license, and elsewhere it specifically listed only family members as people
who would use your license. (95.181 and 95.179). So from that it was starting to
sound like you could only talk to people operating under the same license, and
only family members were allowed to share a license. Of course, 95.33(a)1-4
had to go confuse things by talking about how it was acceptable to share stations,
but didn't say a thing about licenses.

I do get a good chuckle over the FCC site regularly referring to part 95 as having
been "clearly written so as to be easy to understand."

It doesn't take hardly any time to find contradictions in Twisty's
posts:

From: Twistedhed (twistedhed@webtv.net)
Subject: Re: Cobra 45WX Mod
Newsgroups: rec.radio.cb
Date: 2002-06-05 07:46:44 PST

"...Talking on the freeband, while technically illegal, is for the
large part, ignored by the FCC. Most of the services assigned to those
frequencies have long abandoned them in favor of up-to-date
communications."

From: twistedhed@webtv.net (twistedhed@webtv.net)
Subject: Re: Problem with Export Radios
Newsgroups: rec.radio.cb
Date: 2001-02-25 06:46:03 PST

"...As QRM mentioned, many of the freqs are allocated to other
services, but what he doesn't mention, is many of these frequencies
have been deserted and/or abandoned long ago by the perspective
entities that retain rights to these freqs. There may be a few hold
outs, but not many. The only thing one is likely to hear from 26 to
the high 29's are other freebanders."

703. Skippy and Twisty -- birds of a feather

Newsgroup: rec.radio.cb
Date: 2002-11-07 08:36:35 UTC
From: yeti@REMOVEcet.com
Message-ID: <3dca24c2.4729756@news.cet.com>
Source record: 143289

While responding the the other post I noticed a similarity between those two. It's not suprising that Twisty ignored the partial list I posted of current licensees on the so-called 'freeband'. It's just like the way Skippy ignored three of my posts which contain irrefutable facts regarding the poor performance of sweep tube amps.

Hey Skippy, do you remember how that thread started? It started with you begging Voobner to back up his facts when you couldn't back up your own. I jumped in with a couple of your 'facts': You claimed that a 6146 was used as a sweep tube, a claim which you eventually conceded (with multiple lame excuses, however). And you STILL haven't come up with a currently produced amplifier legal for any service between 24 and 35 MHz. Instead you labored under the false presumption that I wouldn't attempt to verify the examples you provided. But when that didn't work you avoided the issue by trying to divert the conversation into subjects where you thought you would have the upper hand -- but were summarily disgraced.

"Classic issue dodge techniques when you have little background in the area... The news group would be better served if Skippy could state facts as he knows them and provide supporting technical/factual material. At this time, nothing of substance has been revealed from Skippy's posts. Just a lot of cannon fodder... "

I think you are doing the SWR correctly, But just in
case...................

The CAL position is used to adjust the needle to full scale with a AM
carrier being transmitted. In your case it sounds like there is a V
that marks this calibration spot instead. If so adjust it to the V.
There is some sort of potentiometer that will allow this adjustment.

Then switch the meter to SWR and take your SWR readings.

?!

http://www.sadona.com/news/ant_dblzepp.html

Here's the text.

"The Zepp, short for Zeppelin is any resonant antenna end-fed by ladder line. A Double Zepp means a center-fed antenna. This extended version provides 3 db gain over a dipole. The double Zepp consists of two collinear 0.64 wave length elements fed in phase. The diagram above shows current distribution in a double Zepp antenna. The 1.1 balun is used to connect the 450 ohm ladder line to 50 ohm coaxial cable.

The only adjustment is in trimming the 450 ohm line matching section to best SWR. Shorten about an inch at a time until best SWR is reached. The Double Zepp works well on any of the amateur bands. The Zepp is a very good portable QRP antenna. Build one for each band.

I get your meaning, Doc. I still believe the IMAX-2000 is more closely
related to an "extended" Zepp than a 5/8-wave though.

> Certainly. Let us place it in proper context wihtout your undermind.
> You admit to intentionally jamming another operator.

Like in the case of the 10 meter intruders, is the act of a legally operated transmitter, which interferes with the action of an illegally operated one, really considered jamming? Like licensed hams running legally on 28.085, stomping on illegal freeband intruders, a part 15 device, which prevents an illegaly operator from jamming the conversations of several other people, is not really jamming.

> His actions are irrelevant to yours.

How so? His presence was a disruption to any local that he happened to target, including me. He thought he was untouchable. We proved otherwise.

> I talk on a freebnad freq and you claim it has a a
> mere "potential to interfere". You are ludicrously failing at attempting
> to claim the act of jamming is more benign than the act of something
> that MAY jam.

"Jamming" with a device that emits a signal with a power level less than 100 mW, is not going to jam anything other than the intended target, who was also, due to his excessive power, responsible for generating TVI in his neighborhood. So my solution actually solved that problem as well.

Your latest feeble attempt, on your crusade to malign my character has fallen short yet again. Anyone with a reasonable mind would conclude that a small amount of jamming to remove a larger problem is well worth the trade.

>
> >I fail to see it that way, and I'm sure if you ask >an FCC official, he

> illegal operation.

You really are thick aren't you? Have you never heard the term
"independant contractor"? I was not "employed" by anyone. I was not on
their payroll. I worked on radios, they paid me for each repair, I'm
sure they tacked on an extra charge on top of mine to the end customer,
but that's none of my business.

>
> >and sold radios to the local guys. I was the >guy who did the repair

The term "plenty" is a relative term. Any business looks to expand. I
also stated that I made no money from radio SALES, but I made money from
the repairs that I did. Besides, these were friends of mine. I was
helping them out. That's what friends do. You should get a few sometime
and try it.

>

> the phone number still valid? Was it your phone number at your house?

The name of the business, were the initials of the two guys who "owned"
it. My name is not associated with it anywhere. And no, the phone was
not mine either. I don't know if they are still valid. Call them and
see. Ask for Cliff or Wayne.

You're still reaching, but falling short yet again.

>
> >Well does freeband DX violate FCC rules? A >yes or no answer is all

>
> With "better" mods? What makes your mods better?

By virtue of my education, and my possession of many pieces of
commercial grade test equipment.
>
> >which resulted in a cleaner radio signal.
>
> You also were involved in illegal sales.

>
> >First off, you don't know what we sold. <
>
> Again, correct. Your posts could all be lies.

That depends. I never made any claim of selling anything, since I wasn't
involved in sales.

>
> >It's perfectly legal to sell type accepted radios >to people. Why would
> you assume that the >business sold anything else?
>
> Are you saying you didn't, Dave, sell any illegal radios? A simple yes

I never sold any radios, as part of this business. Illegal or
otherwise.

>
> >secondly, I was not involved in the sales end.<
>
> Hmmm....so those posts alluding otherwise was just to "drum up business"
> that you weren't really involved in, didn't make any money at, and did
> it as a community service....(ROAR)!

As a service to the business, which was operated by personal friends of
mine.

ime ago.
>
> >A remote car control is effective on only one >channel.
>
> Not true. Get it within a few yards and it can be very effective across
> the band.

Not if your receiver has a decent front end. A remote car control is
basically an on-off carrier device, with alternating tones. Those tones
may splatter a few channels, but not any more than a "clipped" CB. So
are you now claiming that a local can plug your ears from a 1/2 mile
away, on all channels, since that would be about the equivilent signal
level compared to a 100mW device at "a few yards"? You must have one
crummy receiver.

>
> >That would've required trespass.<
>
> Not if it's my yard. See, you suffer from this affliction and

> distinction of limited view...it somehow disallows all other examples in
> your limited grasp of things.

Well yea, I do tend to stay rooted in reality. Examples like saucer men,
and other wild ideas are normally discounted, unless proven viable.

>
> >We're not talking about YOUR yard, we're >talking about the guy who
> actually got the >device planted.
>
> Poor side step,,,you have done better.
> You made the incorrect statement that it is oly good for one channel and
> I corrected the statement.

No you countered the statement, but you were not correct. Stay with
argueing the semantics of illegal operation. Technical discussions are
way beyond your abilities.

So, on one hand, you make the claim that I could have planted the device
a few yards away without requiring trespass, in your yard, yet in
another statement, you claim that your yard is not on the scale of a
postage stamp. So tell me, how does one have any sizable acreage for a
yard, and still be able to get within a few yard of your antenna,
without tresspassing? Do you mount your antenna, on a pole at your
property line? That's not what most people do, and certainly not in the
case I was refering to.

> You, realizing you lost more face and even
> more credibility (is that even possible?) an ran back to your personal
> example.

Well Duh! my "personal" example is what we were originally discussing.
What relevance does your yard have in it? Unless you want me to plant a
device in your yard.......

You're really losing what little grasp of reality you have left. Maybe
you're still upset that Bush is still Governer......

This is becoming too much fun. I give you a snippet of a post that I
made from my "old" account 7 or 8 years ago, and you magically claim to
have been given information from some "upperclassman". Coincidence? I
think not. I know all too well, your obsession with tarnishing my name.
Do you think I would give you something, if I had something to hide? I
can picture you searching through google for each and every post that I
ever made, comparing headers, and cross checking several times, looking
for something to use against me. Your problem is that I don't hide what
I do/did, and what I do/did, changes nothing with regard to what you do
now. If I was as impotent as you claim, then why go though all this
effort to try to discredit me? You make way too much noise for someone
who is supposedly not bothered by what other people think. You say one
thing, but your actions speak in a much different voice.

Don't you think I knew what you were going to bring up? Like I've said many times, you are nothing else if not predictable. I've been playing that cheap fiddle again, and you, true to form, have not disappointed.

This is almost another classic. Here we are in a newsgroup filled with
nothing but words, and twisty here is trying to separate out "action"
words from "regular" words.

You're a piece of work.

Dave

: > you assume that the >business sold anything else?
: >
: > Are you saying you didn't, Dave, sell any illegal radios? A simple yes
: > or no will do.
:
: *I* never sold any radios, as part of this business. Illegal or

: otherwise.
:
:
: >
: > >secondly, I was not involved in the sales end.<
: >
: > Hmmm....so those posts alluding otherwise was just to "drum up business"
: > that you weren't really involved in, didn't make any money at, and did
: > it as a community service....(ROAR)!
:
: As a service to the business, which was operated by personal friends of
: mine.
:
: ime ago.
: >
: > >A remote car control is effective on only one >channel.
: >
: > Not true. Get it within a few yards and it can be very effective across
: > the band.
:
: Not if your receiver has a decent front end. A remote car control is
: basically an on-off carrier device, with alternating tones. Those tones
: may splatter a few channels, but not any more than a "clipped" CB. So
: are you now claiming that a local can plug your ears from a 1/2 mile
: away, on all channels, since that would be about the equivilent signal
: level compared to a 100mW device at "a few yards"? You must have one
: crummy receiver.
:
:
: >
: > >That would've required trespass.<
: >
: > Not if it's my yard. See, you suffer from this affliction and
: > distinction of limited view...it somehow disallows all other examples in
: > your limited grasp of things.
:
: Well yea, I do tend to stay rooted in reality. Examples like saucer men,
: and other wild ideas are normally discounted, unless proven viable.
:
: >
: > >We're not talking about YOUR yard, we're >talking about the guy who
: > actually got the >device planted.
: >
: > Poor side step,,,you have done better.
: > You made the incorrect statement that it is oly good for one channel and
: > I corrected the statement.
:
: No you countered the statement, but you were not correct. Stay with
: argueing the semantics of illegal operation. Technical discussions are
: way beyond your abilities.

:
: So, on one hand, you make the claim that I could have planted the device
: a few yards away without requiring trespass, in your yard, yet in
: another statement, you claim that your yard is not on the scale of a
: postage stamp. So tell me, how does one have any sizable acreage for a
: yard, and still be able to get within a few yard of your antenna,
: without tresspassing? Do you mount your antenna, on a pole at your
: property line? That's not what most people do, and certainly not in the
: case I was refering to.
:
:
:
: > You, realizing you lost more face and even
: > more credibility (is that even possible?) an ran back to your personal
: > example.
:
:
: Well Duh! my "personal" example is what we were originally discussing.
: What relevance does your yard have in it? Unless you want me to plant a
: device in your yard.......
:
:
: You're really losing what little grasp of reality you have left. Maybe
: you're still upset that Bush is still Governer......
:
: This is becoming too much fun. I give you a snippet of a post that I
: made from my "old" account 7 or 8 years ago, and you magically claim to
: have been given information from some "upperclassman". Coincidence? I
: think not. I know all too well, your obsession with tarnishing my name.
: Do you think I would give you something, if I had something to hide? I
: can picture you searching through google for each and every post that I
: ever made, comparing headers, and cross checking several times, looking
: for something to use against me. Your problem is that I don't hide what
: I do/did, and what I do/did, changes nothing with regard to what you do
: now. If I was as impotent as you claim, then why go though all this
: effort to try to discredit me? You make way too much noise for someone
: who is supposedly not bothered by what other people think. You say one
: thing, but your actions speak in a much different voice.
:
: Don't you think I knew what you were going to bring up? Like I've said

Peak and tune......that's it...Oh, yesterday I tried somethin. while
in calibrate and keyed down, I made a slightly loud audio tone, hgh
pitched, and with the CAL knob down it cause it to peak out right
below the red zone, then I calibrated it from there. Still get 1.2-1.3
SWR at that and maxed out CAL. Maybe a power problem???

You need to do the SWR in AM mode, with no audio.

If you're in sideband, or DSB, you won't be able to cal the meter.

Bert,
I would try another source of information,
because that definition is just not correct.
It has parts of it right, about the feed line,
but the lengths are wrong.
The difference between a 5/8 wave (.625) and
half of a 'Zepp' antenna (.640) amounts to about
6" at 27 Mhz. That difference in length between
the two just doesn't make enough difference to
worry about, and depending on the conductor used
for the antenna can be merely a difference in it's
velocity factor. The second requirement, being
fed with a balanced parallel feed line is missing
too.
'Doc

Talk to "One QuickTA" in MN, he may be able to tell you more about radios in a Trans Am....
What did you say your radio was dead keying? I have seen radios do what you describe with a real low dead key.....the radio may even be "pre-married" to the box,....nothing better than when the radio fits the amp like a glove without doing a thing.....good luck with it.

>Like in the case of the 10 meter intruders,

Dave, you are rambling again...ten meter intruders was never the topic and your attempted redirect I shall not allow.

Your jamming is nothing like licensed uppeclassmen cwing over unlicensed ops.
You have committed a crime (your words) and made it ok, made it alright with yourself to break the law in this example. You have somehow made it ok in your world, you have not only allowed yourself but have convinced yourself that your reasoning was valid enough to merit breaking the law. You have placed yourself above the law, much in the way shoplifters do...they claim that it is "ok" and, much like you, exert vast amounts of wasted energy and words attmpting to justify their transgressions to anyone that will give them the time of day. The buck stops here.

Which server? Posts I have seen by you are from several.....many even.....

>That's a lie. Plain and simple.<

WinNT Mimeversion 1.0 3.04 Mozilla Gold.

>I don't know how that reflects in the message >headers, but I use it the same as I always did.

Wanna split hairs? Forget the ISP. You have accessed this group by many different avenues.
>No, I haven't.<

I'll hold that one.....you can always claim "By golly ah guess ah did....fergut abote that thar won!"

>You look too hard for things that aren't there.<

When they are there, you lie and when called on it claim you forgot. Try reading only what is there and not what your unpopular views limit you to.

>But suppose I DID use a different ISP, what's >the difference,

It would make you liar.....again....and we are talking access, not necessarily ISP's.

>I use my
>real name, and my E-mail is still the same. >Unlike you,

Ha! My email has always been at webtv.

> no need to conceil my identity.

Identity? What does identity even remotely have to do with anything? You're in cb land junior, and cb don't use propers.

>Gee I wonder why? Maybe because they have >something to hide?

(Giggle) Okaaaay!

> Such as illegal operation?<

Well, which is it, am I hiding or bragging about breaking the law? Can't have it both ways.....hahahaahahahah!

>I can't be responsible for the hardware >changes that my ISP does.

Sure you can. Obey the TOS set forth by the company you choose to access the group.

>What rule have I broken?<

Dunno.....why have you had so many separate accesses?

>I don't.<

See above just for starters....you'll hang yourself trying to defend that one too.....

> I have used the same ISP for the last at least >6 years now.

With several other access sites employed by you.

>What, I'm not allowed to express an opinion? >That's too bad for you >if that's what you think.

You have demonstrated a preponderance for not knowing what the majority or I think.

>Right.....which is why they are so vocal.<

They are so vocal cause you are blackening the eye of hammie radio each time you attempt more bullshit, but go ahead and continue to employ thinking only as you can..after all...you fail to see yourself as the majority do.
Sorry Dave, "ghost" support don't cut it. And if you didn't feel so alienated and defeated, you wouldn't look to others to validate yourself.

>I'm still waiting to hear from that "majority" that >you seem to think you represent. But you'll >have to bring them here. I'm not going to Mars >anytime soon.

Space shouldnt be that foreign to you, all things considered.
Yes, I maintain I represent the majority of cbers, hence my views and words popular enough to appear in print concerning cb. The fact that you are hammie trolls in a cb group crying about identities is plenty.
You were defeated once asking this, but we can ask again...all those agreeing with Dave's definition of "federal criminal" (IE: Anyone who has ever received a notice of a rule violation from the FCC) speak now or forever hold you peace.
Hokey Dokey, Dave?

>And I still don't understand the meaning of the >term "slurp".....

Look at your current header. Quite different from at least 5 or 6 others, and that's just what was sent. there's probably more.

>Maybe my newserver has a dynamic routing. I >don't know. I'm not a >pencil-necked internet geek, so I really don't >know the nuances of >each and every routing protocol.

Really? You mean someone was forging you whwn you were attempting to educate another and bragging on your computer prowess abilities?

>When have I done that?<

Are you denying this, Dave?

> Me thinks you have me confused with >someone else.

Then you ARE denying it, Dav

>BTW, if you enter "Dave Hall" in your Google >searches, you're going to find many.

Not in rec.radio.cb there aren't...and there is only one N3CVJ.

>It's a common name, just like "John Smith".

Not in rec.radio.cb, it's not.

A franchise? You now claim your little business was a franchise and that it belonged to others..is that what you are attempting to say, Dave?

>No, I'm not "attempting" to say anything. I'm >TELLING you, straight >up, that the "business" >was a side line >operated by two local friends >of mine, and that I did repair work for them. I >made NO money from the >sales of radios.

So you were the legit "employee kept in the dark" of an otherwise illegal operation.

>You really are thick aren't you? Have you >never heard the term "independant >contractor"?

Keep going, GE man.

>I was not "employed" by anyone. I was not on >their payroll. I worked on radios, they paid me >for each repair, I'm sure they tacked on an >extra charge on top of mine to the end >customer, but that's none of my business.
>and sold radios to the local guys. I was the >guy who did the repair work.

Why would a mere tech use the business as his sig?

>Uh, as a way to drum up business?<

Why? You already claimed in one post you made no money and in another you claimed you had puh-lenty of business.....damn..you're off and running in record time this time.....ggod thing you have 2 nocodes lapping at my heels to attempt redirects from such self-contradicting posts, hmmmm?

>The term "plenty" is a relative term.<

Of ocurse when invoked by you we would expect nothing less.

>Any business looks to expand. I also stated >that I made no money from radio SALES, but I >made money from the repairs that I did.

So you advertised radios or sale for THEM? Why, if you were an independent contactor?

>Besides, these were friends of mine. <

Nice friends...didn't you claim one was a sex fiend?

>I was helping them out. That's what friends do.<

But of course you were....hahahaaha!

>I was the only one on the internet at the time, >and thought it might >be a way to expand our operation. Nothing >sinister there.

No Dave, you claimed it yours.

>Where? Prove that one. I never did any such >thing.
>I NEVER claimed that the business was mine.

Like George likes to say, "that isn't MY crack in my pocket, officer"..nyuk nyuk nyuk...what's good for the goose...ya' can't have it both ways! It was YOUR name as a sig with the business name and phone right below your name.

>Which means nothing.<

We can think for ourselves, Dave, thanks.

> No more than if I were recommending a >website that sells gear, or a specific radio >brand.

(snicker) Okaaay! You like the brand of sneaker you wear so you will use it as a sig.....hahahhahahaahaahahhahaha..beautiful!

>RigOnce again, you assume things, and then >when you are corrected, you accuse the other >peson of lieing, based on nothing more than >your own incorrect assumptions.

Oh well. I call a spade a spade.
Your excuses (both asked for, and those you provided) are at the grammar school level.....again..I ask you,,,,who here do you exactly expect to believe you? A simple question.
Your attempted dishonesty at this point in time continues to make all aware of your character traits,,,right there along with your arrrogance in believing anyone would believe anything less than the truth. Talk about a dance and a song..hahaha!

>The truth is something that is clear to anyone >who comprehends properly.

Sure it is.....but you are here trying to tell us it's what you claim it is and not what we see.....hahhahahahhahaahahhahahahahahhahah...get over it!

We'll keep that around for awhile to resurrect at the right time.

>Now would be a good time.<

Nah,,it's always fun to watch you regurgitate on your own claims when caught in lies with "I fergote abote that verbotten one!"

>Translation: I need to spend more time >searching google for more tidbits

Think whatever you like.
It is when you speak, that we get the real treasures.

>I can distort into an alternate reality.<

Oh really Dave? Is that when you were only the "repair guy" for the business? Once again, your posts show you did quite a bit more than "undo" Galaxies. Blow your bullshit somewhere else, Dave. You're all washed up here.

>I've been "in the business" of reparing radios >since I was 15, as a >sideline. I was associated with the particular >business in question for
>only about 2 years, back in the 1995 time >frame. I operated >independently, my name was listed nowhere >in this dealer franchise.

Wrong. You posted the business name and phone number as part of your sig. with no mention of "other" guys anywhere in any of your posts. Is the phone number still valid? Was it your phone number at your house?

>The name of the business, were the initials of >the two guys who "owned" it. My name is not >associated with it anywhere. And no, the >phone was not mine either. I don't know if they >are still valid. Call them and see. Ask for Cliff >or Wayne.

You don;t know if it's valid but want me to ask for someone by name. Gee Dave, that ranks right there with your backslide when I took you up on your offer to meet your "FCC guy".
You're still reaching, but falling short yet again.

>Well does freeband DX violate FCC rules? A >yes or no answer is all >that's required.

Pigeonholing doesn't work and I have never allowed it, hence the "Aarons dogs" humping my leg.

>I'll take that as a "Yes"

Cool.

>The difference was that I was at least >attempting to correct some really BAD advice >and modification work,

With "better" mods? What makes your mods better?

>By virtue of my education, and my possession >of many pieces of commercial grade test >equipment.

Here we go...another jewel..hahha..I can't believe the ego of some of you cryabies that bicth and moan...no wonder we are superior in every facet. We hit you where it hurts the most, in your false image you have created of yourself....hahahahhaa!

>which resulted in a cleaner radio signal.
>You also were involved in illegal sales.
>First off, you don't know what we sold.

Again, correct. Your posts could all be lies.

>That depends. I never made any claim of >selling anything, since I wasn't involved in >sales.

Are you denying offering to sell radios on the interet Dave?

>It's perfectly legal to sell type accepted radios >to people.

You just said you weren;t doing it, yet you attempt a defense of the practice.............ayet we are to believe what you claim, again, not what we see.....hahahahahahahhahha!

>Why would
>you assume that the business sold anything >else?

Are you saying you didn't, Dave, sell any illegal radios? A simple yes or no will do.

>*I* never sold any radios, as part of this >business. Illegal or otherwise.

And you were NOT involved in any aspect of selling radios at the time, correct Dave?

>secondly, I was not involved in the sales end.<
Hmmm....so those posts alluding otherwise was just to "drum up business" that you weren't really involved in, didn't make any money at, and did it as a community service....(ROAR)!

>As a service to the business, which was >operated by personal friends of mine.

We see how you rate your friends.....one is a sex fiend and ...what about the other?

>A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>Not if your receiver has a decent front end. <

This coming from an alleged "tech".....man, when it rains it really poors on your head, huh Dave? We are talking cb. Again, you're wrong. Spread some of that wisdom and experence you claim by education...hahahahhahahahaahahahhahhahahaahahahah!

>A remote car control is<

(Snip.)

Thanks Dave, but no one needs the benefit of your socialist views or warped interpretations on anything.

>Those tones may splatter a few channels, but >not any more than a "clipped" CB.

Make up your mind. YOU claimed, not long ago, that my dx activities had the potential to splatter across the BAND.....besides assuming I am running extra power,
you can plainly spot another of your self-contradictions.

>So are you now claiming that a local can plug >your ears from a 1/2 mile away,

Again, I must resort to asking....why is it, that some of those licensed for communication, such as yourself, suffer the greatest deficiencies in such? The irony is lost on you..which makes it a growing delight by the day. How did you get a half mile from my "few yards?" Your gray matter is really straining in that overdrive.....hahahahhaahah!

>That would've required trespass.<

Not if it's my yard. See, you suffer from this affliction and distinction of limited view...it somehow disallows all other examples in your limited grasp of things.

>Well yea, I do tend to stay rooted in reality.<

Lies are not reality to anyone but yourself, and "Arron's" named posse of Lelnad KCLDO, Dogie Adair N8WWM, and frank Gilliland and George Busch..WA3MOJ .

> Examples like saucer men, and other wild >ideas are normally discounted, unless proven >viable.

Now you're talking about Lelnad and Frank's backgrounds.

>We're not talking about YOUR yard, we're >talking about the guy who >actually got the device planted.

Poor side step,,,you have done better.
You made the incorrect statement that it is only good for one channel and I corrected the statement.

>No you countered the statement, but you were >not correct.

Sure I was. You are applying hammie technicalities (hammie rigs) where they don't apply.

> Stay with argueing the semantics of illegal >operation. Technical discussions are way >beyond your abilities.

Then you have much to learn. You and George must share the same drinking water.

>So, on one hand, you make the claim that I >could have planted the device a few yards >away without requiring trespass, in your yard,

No, I never made that claim at all.

> yet in another statement, you claim that your >yard is not on the scale of a postage stamp. >So tell me, how does one have any sizable >acreage for a yard, and still be able to get >within a few yard of your antenna, without >tresspassing?

Well, slingshot for one.....but that isn;t what we were discussing...
I claimed the device would be heard across all 40 within a few yards of an antenna....YOU claimed it would involve trespass...I claimed not in my yard, it would not be trespass.
Anything else you are attempting but failing again at inferring solidifies your
ignorance and intent.

>Do you mount your antenna, on a pole at your >property line?

I may not have an antenna.

>That's not what most people do, and certainly >not in the case I was refering to.

You mean INFERRING.
You, realizing you lost more face and even more credibility (is that even possible?) an ran back to your personal example.

>Well Duh! my "personal" example is what we >were originally discussing. What relevance >does your yard have in it?

Dunno...you brought it up when you
realized your inference of me trespassing failed.

>Unless you want me to plant a device in your >yard.....

Sure.....you can try, but I must warn you in advance.....Florida has laws that differ a bit from Pa.....it would be a shame to tell that little girl of yours that her daddy was eaten by hog dogs.

>You're really losing what little grasp of reality >you have left. Maybe you're still upset that >Bush is still Governer.....

Um.....about that education you espouse..I mention it only because feel it relevant, but you seem to have slept through the spelling lessons.

>This is becoming too much fun. I give you a >snippet of a post that I made from my "old" >account 7 or 8 years ago, and you magically >claim to have been given information from >some "upperclassman".

You didn't give me anything, Dave. You certainly never mentioned anything about you being a hack shop.

>Coincidence? I think not.<

I KNOW not. I pointed it out, now you are going to lie some more and act like you brought it forward...but don't worry, Dave, there may be some poor soulthat actually believes the mess you have created for yourself.

> I know all too well, your obsession with >tarnishing my name.

Check all our conversations, Dave. As a matter of fat, you completely ignored how we were first introduced when I mentioned it.....you came at me first, as always, and when you realized you were impotent and up against someone who wouldn't roll over and kiss your smarmy uppity arrogant, hammie azz, you and Lelnad and N8 went wild. It has always been YOU that attacks the person and not the post.....'cause you lack communciation skills. It has always been you that has drawn first blood with your personal hangups and concerns with identity...if you weren't having such a crisis, you probably wouln't be such a bad guy,,,,but your family is fractured just like your mind, and it's plain to see why she left.

>Do you think I would give you something, if I >had something to hide?

You didn't give it to me, Dave.

> I can picture you searching through google for >each and every post that I ever made, >comparing headers, and cross checking >several times, looking for something to use >against me.

Hahhaha....that ego!!!!!

>Your problem is that I don't hide what I do/did, >and what I do/did,

Well, you have claimed I hide, then you have claimed I brag. Do I brag that I hide Dave, or do I hide that I brag.......MMMMPH!

>Changes nothing with regard to what you do >now. If I was as impotent as you claim, then >why go though all this effort to try to discredit >me?

There you have it. I "go through" nothing, merely point things out.

>You make way too much noise for someone >who is supposedly not bothered by what other >people think. You say one thing, but your >actions speak in a much different voice.
>Don't you think I knew what you were going to >bring up?

Sure you did....you are afflicted with the "seer" malady.

> Like I've said many times, you are nothing >else if not predictable. I've been playing that >cheap fiddle again, and you, true to form, have >not disappointed.

I've never heard fondling yourself referred to as "plaing that cheap fiddle" but it's not surprising seeing you were in busines with a sex fiend when you ran a hack shoppe.

>Dave
>"Sandbagger"
>N3CVJ

Don't be shy, now Dave,,,out that call where all can see it. Be proud of what you have accomplished with your education, even if you were ripped off..

Ron Jarrell <jarrell@babylon5.cc.vt.edu> writes:

As a prequel to my comments here, see my other posts concerning Phil Kane's comments.

> I guess what was confusing was that licensees managed systems of
> stations, and under the section on what the license allowed it talked
> about supporting the personal or business activities of the licensee and
> the people using the license, and elsewhere it specifically listed only
> family members as people who would use your license. (95.181 and 95.179).

179 says, in part:
Sec. 95.179 Individuals who may be station operators.

(a) An individual GMRS system licensee may permit
immediate family members to be station operators in
his or her GMRS system. Immediate family members are
the: [list of members omitted]

This is a list of people who may be station operators: the licensee and his
or her immediate family members.

181 says, again in part:
Sec. 95.181 Permissible communications.

(a) A station operator for an individual who is
licensed in the GMRS (other than an employee of that
individual) may communicate two-way voice messages
concerning the licensee's personal or business activities
(see Sec. 95.179).

I see a limitation on _what_ may be transmitted, but not to _whom_ it may
be transmitted. The other sections state that transmissions may be to
"other GMRS stations at any geographical location ... ." (Section 95.101)
Again, there is no restriction on transmissions to family members.

> So from that it was starting to sound like you could only talk to people
> operating under the same license, and only family members were allowed to
> share a license.

I don't see that myself, but I know reasonable people often disagree.

> Of course, 95.33(a)1-4 had to go confuse things by
> talking about how it was acceptable to share stations, but didn't say a
> thing about licenses.

I _think_ this is supposd to keep repeaters from being commercial.

>
> I do get a good chuckle over the FCC site regularly referring to part 95
> as having been "clearly written so as to be easy to understand."

One of the problems with all regulations is that you have to know what the intent was before you can understand what the regs are saying. 95.33 is a good example. Repeaters are never mentioned in the section; is that what they're talking about? Who can tell?

To add to the confusion, my local REACT club has an old club license (these are no longer authorized), so it falls within the regs which I've ignored here that deal with non-individual licensees. And we're back to my quandry over Phil Kane's post: is our participation in charitable events as communications teams a part of our 'business'? If we didn't have a club license, would our participation on individual licenses be a part of our personal activities? As a lawyer, I appear to be able to transmit messages concerning my business activities (I guess I can call the opposing lawyer on his GMRS radio and tell him I'm suing? :-> I can't quite figure out how I can use it "concerning the licensee's ... business activities," but I'm sure someone will as it applies to us lawyers).

The beer's on me, Ron, the next time you're in the San Francisco Bay Area. I'm not likely to be in Vermont in the forseeable future. Brrrr!

: yeti@REMOVEcet.com <yeti@removecet.com> wrote:
: While responding the the other post I noticed a similarity between
: those two. It's not suprising that Twisty ignored the partial list I
: posted of current licensees on the so-called 'freeband'. It's just
: like the way Skippy ignored three of my posts which contain
: irrefutable facts regarding the poor performance of sweep tube amps.

Your "irrefutable facts" don't hold water... a lot of your technical advise is dated technology, you read book data type data sheets and examples for the most part indicate you have actually built very few amplifiers.... and some of your previous circuit statements would cause people to melt down tubes using your examples. Now that's what I call poor preformance of any rf ampilifier.

: Hey Skippy, do you remember how that thread started? It started with
: you begging Voobner to back up his facts when you couldn't back up
: your own. I jumped in with a couple of your 'facts': You claimed that
: a 6146 was used as a sweep tube, a claim which you eventually conceded

Frankie, you running low on ammo..? you love to go back to the thread where I reposted someone else's text and had no significant reason to doubt that a TV might have used a 6146 or similar tube in the amplication. That's all you've got to go with...? come on Frankie...

In at least two posts, you mention a grid tied to the plate path in an rf amplifier circuit... really bad news frank.

You claim to be a broadcast engineer with lots of knowledge but you have never heard of tetrode reverse screen current and threw a fit when I once mentioned it.

You said grounded grid amplifiers need to be neutralized.

You tell people to put equalization networks on retifiers, when in fact it is very dated technology.

The list goes on...

: (with multiple lame excuses, however). And you STILL haven't come up
: with a currently produced amplifier legal for any service between 24
: and 35 MHz. Instead you labored under the false presumption that I
: wouldn't attempt to verify the examples you provided. But when that

The two Motorola amplifier models I provided are legal for operation within the 25-50MHz range. The fact that you can not verify their legality is of little concern to me.

The Ebay sold TPL amplifiers examples I posted are pretty much circuit equivalents for pre ban models which were spec below the current 35Mhz benchmark. There should be no reason why they cannot be used at... say 31MHz when no mods would be required for operation in the same radio service. Since a lot of your verbal diatribe is flawed, why believe you... I called the FCC for an offical answer, of which I have yet to receive.

I have an actual FCC Radio Service: IB License license in my hand, against my better judgement, I posted the actual FCC file number in that thread just to get you to stop wasting so much bandwitch spazzing about it... didn't do much good... since you can't find it on line, you quicly claim it doesn't exist or is not possible. Hard copies are the bottom line frankie...

: didn't work you avoided the issue by trying to divert the conversation
: into subjects where you thought you would have the upper hand -- but
: were summarily disgraced.

I don't feel disgraced... I believe we clearly showed you have little actual rf amplifier experience. Especially when applied to the real world.

: "Classic issue dodge techniques when you have little background in the
: area... The news group would be better served if Skippy could state
: facts as he knows them and provide supporting technical/factual
: material. At this time, nothing of substance has been revealed from
: Skippy's posts. Just a lot of cannon fodder... "

I actually have a lot more background in the area than you could ever hope to achieve Frankie... The news group is better served when topics are clearly defined, illustrated and gone through.

Readers hopefully have seen some of my follow up posts to your more serious errors and will first do their homework to avoid costly mistakes which also waste a lot of time.

I put a lot of technical material on line at http://sonic.ucdavis.edu I keep asking you for any projects, texts or articles you've writen or posted on the net... or the news groups that isn't your typical hate replies to other peoples posts. Anything at all Frankie..? I even said "please" more than once..

Once again Frankie... please..? anything at all..?

Just to show you I'm a nice guy... I'm willing to post any electronic related (and legal) text on the sonic server you migh offer up. I'll even promise to leave it as is... not change a thing as you send it.

Show us the money frankie...

skipp

Hmmmmmmmmmmm. Looks like there's going to be some disappointed
demagogues, uh er, I
mean Democrats. I thought everybody was sayin' how the Reps were going
to lose the House.

Nope...just the next presidency....watch the economy now....it will sour
and you'll blame it on the last democratic incumbents. Won't matter
though, a sour economy will be worth tossing out the Bush clan no matter
who gets the blame....as you know, historically, the people always vote
the economy. He's gone.

>Economy? How come they didn't do that THIS >time?

Not a full-blown recession yet. Besides, the country is in a false
patrioic fervor and is in the addicted behavior of sacrificing liberties
for the false sense of security. This too, will come to pass. Look for
record numbers of prisons being built and managed by private coporations
(all very large GOP contributors) and a slew of laws to be rubberstamped
through...after all, never mind that we surpassed Africa with
incarceration rates.....that doesn't matter when we have all these
prisons to fill.

>This is the FIRST time ever that a
>sitting President's party didn't lose seats in >Congress during
mid-terms. Even Clinton lost >some
>during his waning moon. Nope, I think you are >mistaken about George
Bush. The fact that >the
>Reps GAINED instead of losing is due, in part, >to George's aggresive
campaigning on the >parts
>of Republican candidates and his continuing >popularity.

I disagree.
It was due to 911...plain and simple. People are freaked.

>Another thing is that the Democrats lack
>that sense of purpose that unites a party >behind a common cause. The
Dems were/are >in disarray,

Yea, it was nothing like the cohesiveness exhibited by the republicans
when the Chinese were stealing secrets from under their noses because
they were interested in Clinton's sex life.....

>they have alienated themselves, even among >their own, by playing
partisan politics with >Bush nomi-
>nees, and by taking the party WAY too far to >the left on such things
as partial-birth abortion, >gay
>rights and other issues that Mr. Average >American just is not
comfortable with.

Jerry, if the "average Amercian" was even regstered to vote, and
exercised that right...repubs would be the last party in
control......the Whigs would have a better chance...

>I'd even go so far
>as to say that they have taken on narrow >causes and forsaken the broad
base of >working people they once feigned to protect >and serve.

And the right abuses those powers.

> Those Joe-in-the-street types, traditionally >Democrat, blue-collar
workers will only allow >themselves to be pulled just so far to the left
of >center before
>they will rebell. Gone are the days when >people will automatically toe
a party line just >because
>Senator so-and-so said to.

WTF you think just happened with the GOP? C'mon Jerry, even the media
recognizes 911's and GB's last minute campaigning for the ticket.

>The media and instant access to news and >opposing views have taken
>care of that.
>We could argue that on and on, but I would, >unless something changes
drastically, lay >odds that
>Mr. Bush will be re-elected; he IS extremely >popular,

Now. But like his father,
they don't feel our pain. They don't bleed red, they bleed blue.

>he is a down to earth sort, <

Well, THAT merits re-election.

>and his handling
>of 9/11 has our patriotism and guard up.

Patriotism isn;'t wearing a flag or Tshirt or jumping on the popular
bandwagon, yet tat is exactly what took place.

>It may be, indeed, that that event just luckily >fell into his
>lap.

Ya' really think?

> Really, the thing, rather mistake, that got his >Dad was the fact that
he made that "Read My >Lips--NO New Taxes" gaffe and then reneged >on
it.

Wrong. We have always tolerated liars in office as we constantly
re-elect them.
"It's the economy, stupid.."..to paraphrase.

> It was a HUGE error. People would not >forgive that inspite of the

On the Cobra 29 the CAL meter looks somthing like this _|_|__|__V with
the V marker on the very right. Even with the knob turned all the way
up it will not swing ove there. I tried keying the mike, and emmited a
fairly loud audio tone to up the RF output, and this caused the needle
to swing up alot.....I adjusted the CAL knob from there into position
and then calibrated the meter like that. I still get SWR readings of
1.2-1.3 with it calibrated this way, and even with the CAL knob turned
all the way up it barely moves the needle, getting readings from
1.3-1.5. So I'm guessing the SWR on this setup is exceptionally good,

I must have a great ground plane. I've had this same radio setup on a 74 GMc pickup and a 97 Ford Taurus and couldn't get readings below 2.0. I'm hoping the CAL problem isn't caused by low power output, I've had the radio peaked and tuned at the local CB shop. I'm really hopin he didn't screw up. But, maybe, just maybe, I just finally got the right setup..... :)

>
> Your Proof

Whenever anyone asks him what kind of CB or antenna he uses, he sidesteps the answer and claims it's a personal attack against him. Why would someone have to hide what kind of radio equipment he's using, especially since he's on a moral crusade to promote legal CB operating?

>

No, he claimed that a 10 meter radio is illegal for amateur use on 10 meters. Here's the post where he replies to a post by Richard Cranium, courtesy of Google:

Message 3 in thread
From: Aaron H. Voobner (ahvoobner@yahoo.com)
Subject: Re: Legal? "CB" listing issues with Ebutt
Newsgroups: rec.radio.cb
Date: 2002-08-01 16:21:34 PST

richcranus@yahoo.com (Richard Cranium)
>There is nothing illegal about a Uniden HR2510
>- IF it is listed unter amateur radio.

Wrong. See below.

>It IS illegal for CB use. But since when has that ever
>mattered to Aanyone other than Aanal Aaron?
>Who isn't a licensed Aamateur and can't use 10 metres
>Aanyhow?

Irrelevant.

>The HR2510 is perfectly legal for 10 metre use.

Wrong again. See below.

>Aanal Aaron is not legal on ANY band!

You sound like Dave & Debbie now.

-Aaron-

ILLEGAL CB TRANSCEIVER LIST
<snipped>

In case you missed it, here's where Aaron claims that the 2510 is illegal
for hams to use:

Richard Cranium: The HR2510 is perfectly legal for 10 metre use.

Aaron Voobner: Wrong again. See below.

Yet Voobner claims again and again that he never said that. And we've
proven by word from the FCC that any radio that operates on 10 meters is
legal for hams to use them there, since there is no type-acceptance
requirement for amateur radio transceivers.

Don't believe me? Look it up.

Tom

I've done it on more than one occasion. Which is why he pursues his dogged campaign to malign my character with much vigor and vitriol. I've struck a nerve within him. He's not at all comfortable with the fact that I can read him like a book, and make him perform predictably for all the group to see. His only vindication, will be to find some bit of information that would somehow discredit me.
I've got to give him some credit, I know I wouldn't sift through 8 or 9 years of archived newsgroup posts looking for some tidbit of information, a changed header, or some personal information, the way he does. I've got a life, and a career, I don't have that kind of time. He get's close, but repeatedly falls short. It's really funny to watch......

And as soon as I fixed the address, the spam started rolling in. Amazing.
That email address is ONLY used in this newsgroup (and some in alt.test
and misc.test). This proves a hunch that I had about spammers: They are
still mining usenet articles for email addresses. I like how some claim I
opted in, even though that address is only used so that people in this
group can contact me. Amazing.

>
>Uh, personal business? :-> What does _that_ mean?

Judge Samuel Conti (N Calif Federal District) once made a
hand-written change to a search warrant we had applied for, changing
the "standard" wording of "...using necessary force..." to read
"...with force deemed appropriate..." When I asked him
(respectfully, of course) what that meant, he replied "screw up and
you will find out". <ggg>

It was my typo. Section 95.181(a) uses the phrase "...concerning
the licensee's personal or business activities". The "or" got lost.

Sorry for the confusion.

Your first mistake was in applying for license. By doing so, you
voluntarily subjected yourself to unconstitutional bureaucratic
rules. No one in my county ever applies for a bureaucratic license
of any type. We are "state citizens," not subject to unconstitutional
federal bureaucratic rules. We do not allow federal bureaucrats
to trample the U.S. Constitution and the Bill of Rights.

Ridge Runner

You're probably better off to either buy or borrow an SWR meter from someone and get it checked out right. From what I understand is that most SWR meters in CB's aren't that accurate.

Better yet is to buy or borrow an antenn analyzer such as the MFJ 259B and check your antenna using that. It will tell you what the SWR is as well as the impedance, and you don't even need to transmit a signal. The analyzer uses its own internal signal.

Tom

You won't find Tom Cruise's telephone number and home address there either. Does that prove he does not exist? Anyway, here we go again: crying about the Voobner name. This crying has been going on for quite a while, and I cannot for the life of me figure out why an entire newsgroup is obsessed with my name to the point of scouring the internet for clues as to my personal information. I must ask, to what end? What would you do if you came to my address and actually saw the mailbox with the name Voobner on it? Would any good come of it? Likely none would. So if you want info, find it yourself, I'm not assisting you.

>>
>> : He is not a ham, so he shouldn't be overly >>concerned with 10

Now you're deciding if people should or shouldn't be overly concerned about 10 meter intruders? Or illegal CBers? Based on what? Whether or not they hold a ham license? Ridiculous. You can't regulate what I (or anyone) should or shouldn't be "concerned with".

>Whenever anyone asks him what kind of CB or >antenna he uses, he
sidesteps
>the answer and claims it's a personal attack against >him. Why would

someone
>have to hide what kind of radio equipment he's using,

As to my radio equipment, there's some stuff on the Voobner family web page, of which the url has been posted again and again in here (do a search on "voobner family web page). It has some old pics of my radios. And at some point I posted info about them (do a search on "aaron's radios") which is stale by now anyway.

My guess is that you don't want information about my radio gear for any purpose except trying to find something in it to whine about. But if you're intent on pursuing this, you might check with Tim Nebo, he's already tried the lame ship-to-shore legality angle a number of times. In my opinion, it's a pretty pathetic argument to pin all your hopes on.

>denied making the statement that all 10 meter radios
>are illegal for amateur use

I guess you did some research and found I never made the statement "all 10 meter radios are illegal for amateur use". So you've shifted your argument over to the Uniden HR-2510. LOL. OK. First let's go to that pesky list of transceivers that you left out:

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turb
CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800
MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX
NORTH STAR - models: NS-3000 and NS-9000
PRESIDENT - models: Grant, J.F.K., Jackson and Lincoln
PRO STAR - model: 240
RANGER - models: AR-3500 and RCI-2950
TEK - model: HR-3950
UNIDEN - models: HR-2510 and HR-2600

So far so good. But this list is not the only thing you snipped. Look at what I *actually* said in the post you referred to (and subsequent ones):

From: Aaron H. Voobner (ahvoobner@yahoo.com)
Subject: Re: 10 meter radios - the final word
Newsgroups: rec.radio.cb
Date: 2002-08-21 17:34:42 PST

>>The HR2510 is perfectly legal for 10 metre use.
>
>Wrong again. See below.

Woah, Tom. You snipped off the rest of my post and the subsequent posts I made. The HR2510 is legal for 10 meter use --- only under certain conditions. One of them being that it is used by a licensed ham, used within Part 95, etc. etc. Nice try tho.

> Wrong Aaron, any ham can legally transmit on
>the ten meter band with those radios.

That is essentially what I said above: under certain circumstances a ham could legally transmit using them in accordance with Part 97. Some individuals take this as an indication that hams may for example, buy radios on the FCC's BANNED LIST from Copper or Pacetronics just by flashing their license. Don't forget that the radios on the FCC's BANNED LIST are still illegal to advertise, distribute, and purchase.

From: Aaron H. Voobner (ahvoobner@yahoo.com)
Subject: Re: Legal? "CB" listing issues with Ebutt

> >using one of these illegal "10 meter CB" radios.
>
>There are no "certain circumstances" about it.

Here are two certain circumstances. FCC Part 97 must be abided by. FCC Part 95 must also be abided by. That means a ham cannot legally use that radio to transmit both on 10 meters and also on CB or the so-called "freeband".

Doesn't sound like I'm saying "all 10 meter radios are illegal" or "hams can't use 10 meter radios on 10 meters", does it? Nope.

You took one sentence out of context in order to make it look like I meant something I didn't.

You realize this old gag has been tried on me many times in here. It didn't work then and it won't work now. The funny thing is that if I am wrong about something (and I have been on occasion), I've admitted to it. I'm not one of these people that needs to maintain a rep as a know-it-all. But when someone tries to misrepresent something I wrote, I will defend it.

Regarding your probes about my home address, phone number, etc. I'm so sorry to see you've made the transition from semi-normal contributor to "anti-Voobner troll". I thought you said I have no credibility? Well I must have a LOT of credibility because you sure have made some serious effort here trying to disparage me. Oh well, you never can judge a book by it's cover, LOL.

The only thing I wonder about is why a ham like you with no axe to grind (other than to give your personal blessing to illegal CB operation and pirate radio) is spending so much time campaigning against Voobner here in rec.radio.cb.

And like I said before, I don't have a hard copy. As far as I know you
are looking at a sheet of toilet paper.

<snip>
>I actually have a lot more background in the area than you could ever hope
>to achieve Frankie...

Alright, you asked for it. Time for the list:

1. You specifically said that the 6146 was used as a sweep tube, but
when faced with the challenge of finding the make and model you
backtracked and said this:

>No television I've heard of uses the 6146 tube as a sweep tube. There
>were
>some older televisions that used the 6146 tube as a horizontal
>oscillator
>and or horizontal oscillator amplifier.

which demonstrated your ignorance of the subject. You didn't know
where the 'sweep' came from in 'sweep tube': I had to explain that
they were named because they were designed specifically for use as
horizontal deflection amplifiers, i.e, television 'sweep' amplifiers.

2. You didn't know what the term "low-mu" described; namely, the amplification factor of a triode. Not only that, but you used the term to describe the triode operation of a sweep tube while saying that it wasn't operating as a triode.

3. To defend your remark that a triode-connected sweep tube wasn't operating as a triode, you tossed out the term "reverse screen current", totally ignoring the fact that reverse screen current occurs because of secondary emission from the plate, a problem which doesn't exist in a sweep tube because of the beam deflection plates AND because the screen is grounded for operation as a TRIODE, which cannot have ANY screen current, forward OR reverse.

4. You didn't know where the 'beam' in 'beam tube' came from, but instead thought it was synonymous with 'power tube'. In fact, you specifically stated that "the 6146 is a beam power tube, which can in the generic sense serve as a 'sweep' tube", which propted me to explain that the 'beam' tube is a subcategory of 'power' tubes, and the 'sweep' tube is an application-specific power tube, be it a beam tube or otherwise.

5. You didn't understand the meaning of 'grid-current distortion', how it's created, or even how to read an EpIp graph to determine the relative smoothness of a grid current transistion.

6. You have shown many times that you didn't even know the difference between Class AB1 and AB2 operation, the difference being that AB1 draws no grid current while AB2 does. In fact, while reading through the previous posts, it seems that you were under the impression that AB1 meant common-cathode while AB2 meant grounded-grid. For example, while discussing neutralization, you state that it is "not required in a properly designed AB2 amplifier", which is totally disrepsective of the fact that an AB2 amplifier can be common-cathode, and therefore require neutralization.

7. You have the mistaken belief that the 'flyweel effect' of a tank circuit is a cure-all for non-linearity in a linear amplifier, when in fact it CANNOT reduce or eliminate grid-current distortion. I needed to explain that in order to be linear you need at least 180 degrees of undistorted conduction time, which you cannot achieve with grid current distortion.

8. You didn't know that 'grounded' in 'grounded-grid' means a signal ground, and not necessarily a DC ground.

9. You didn't know what ALC circuits are, calling them "linearity detectors" (your own terminology), and saying that ALC circuits are "bad news" because of their "time constants". Of course I set the record straight that ALC circuits are basically RF compressors which require attack and decay time constants, and are so used in the radios you claimed had "linearity detectors". You also claimed that ALC circuits are "dated technology" despite their continued and effective use in amplifiers and other circuits.

10. You continue to claim that sweep tube amps meet or exceed FCC specifications, yet you never state those specifications or the conditions under which the amplifiers passed, you never post any noise figures, and you never make any comparisons to amps that use RF power tubes.

11. You clearly do not understand the cause of parasitic oscillations, stating that it is due to the nature of a tube, and that the 6146 and 4CX250 were 'seriously' prone to VHF parasitics. I needed to explain to you that they are caused by resonant conditions within the circuit, not the tube itself. I also explained why sweep tubes are NOT immune from parasitics because of their poor VHF response as you claimed.

12. You didn't realize that if a receiver can hear the background noise on a frequency that a pre-amplifier does not improve the signal-to-noise ratio at all, and will actually ADD to the noise with it's own circuitry.

13. As stated before, you didn't understand why a grounded-grid amplifier does not require neutralization, citing the reason as 'grid screening'. I had to explain that it's not required because the amplifier is non-inverting (which you also didn't understand), where the voltages on the input and output are in phase, and therefore cause no regenerative feedback that would require neutralization (which is where the term originates -- the 'neutralization' of regenerative feedback!).

14. You are under the mistaken impression that grid-to-plate capacitance changes depending on whether the amplifier is grounded-grid or common-cathode. Of course it doesn't, because it's a characteristic of the tube, not of the circuit. I explained that you might be confused because the -input- capacitance is different, and that's because the two different circuits use different parts of the tube for input.

15. You stated that "exciter feed through power of the example AB2 grounded grid amplifier is a big time 'freebie' you don't see in AB1 circuits", which only reinforces my theory that you really don't understand amplifier classes of operation. Grounded-grid amps require drive power because the input is the cathode, which must conduct if the tube is to work at all. Input power of a grounded-grid amplifier is always carried to the plate regardless of class of amplification, and regardless of grid-current.

16. You claimed that grid-current distortion only occurs in a grid-driven circuit. Of course that's not true, as grid-current distortion occurs whenever grid current occurs, regardless of whether it's grounded-grid or common-cathode.

17. You claimed that putting a resistor in series with the cathode of a grounded-grid amplifier will improve linearity, when in fact it does nothing but reduce the output power and dissipate part of the input power. I also pointed out how cathode resistors are commonly used to

improve the linearity of a common-cathode amplifier, but not for RF amplifiers because it would unground the cathode. Such practice is an audio technique that you mistakenly applied to an RF application, and also to the wrong type of amplifier.

18. You stated that voltage equalization networks are "dated technology", claiming that almost no amplifiers use them anymore. This is not only a slap in the face of good engineering practices, but also flows against basic semiconductor theory: Exceed the PIV and the rectifier may fail. Regardless, most amplifier manufacturers do not use series connected rectifiers, opting instead for a single rectifier of the proper voltage rating (which of course doesn't need a voltage equalization network because one rectifier is not multiple rectifiers in series).

19. You were totally unaware that the mic gain is the power control for an SSB radio, showing a gross misunderstanding of the principles of SSB modulation.

20. You claimed that the interelectrode capacitances of a sweep tube are "easily dealt with", yet on the Dentron you failed to recognize an input capacitor used to compensate for the input capacitance of the tube, calling it one leg of a pi tank. In fact, you don't know the difference between a pi-tank and an L-pad, frequently using the term "pi-L" to denote something as yet unidentified.

21. You mentioned one of the drawbacks of running AB1 was dumping power into the swamping resistor, which means that you have no idea that a swamping resistor is used to reduce grid-current distortion. Of course you can't have grid-current distortion in AB1. And you also didn't realize that a low-impedance tuned input is far superior to a swamping resistor (when running AB2) because of the negligible power loss, and because it performs better at maintaining linearity of the signal under grid current transistions.

22. You haven't explained why grid-current distortion is "not an issue" with "most properly designed AB2 grounded grid amplifiers". In fact, you haven't even explained once what makes a "properly designed" amp. On the contrary, I have explained many times why AB2 IS a problem when the amplifier uses sweep tubes.

23. Whenever you don't know something you make up vague and nonsensical terms like "classic", "linearity detector", "passive gain operation", "traditional potentials", "beam power application", or the use of the term "low-mu" to designate a triode-connected sweep tube that doesn't work like a triode (and you still haven't explained how it works if not like a triode).

Who's the one lacking in RF theory and experience, Skippy? It ain't me, that's for DAMN sure!

Yea, that's one of the things some of us here would like to do; support
local events. We've got a bunch of FRS units we use now, and some aging
and near-death green dot and blue dot units (which we have a perfectly useless
license for, thanks to murs)... We were looking at GMRS as a extremely
cost effective way to consolidate systems, and keep the range we need for
the extreme ends of our stuff.

> The beer's on me, Ron, the next time you're in the San Francisco Bay

Virginia, actually. vt.edu stands for Virginia Tech. Vermont is
actually uvm.edu. As I recall it stands for the latin for "university
of the green hills" or some such. Years ago, when people had to start
picking domain names, I argued for vatech.edu, because vt.edu would be
potentially confused with vermont, given that vt is the darn state code
for vermont. I was told "noooo, that'll never happen. and vatech.edu is
too much to type." Sheesh. For the record, yea, happens all the time!

Much colder than the bay, but not nearly as bad as vermont.

Twistedhed <twistedhed@webtv.net> wrote in message
news:13329-3DCAAC9B-83@storefull-2316.public.lawson.webtv.net...

you received one of the best retirement packages one could get under
Clinton. Watch What happens to our senior health funding and blue-collar
workers now.

I don't think you quite understand Railroad Retirement. RR Retirement was
around in the
1880's or thereabouts, When Socialistic IN-security came along under Mr.
Roosevelt, it was
(correctly) opted out. It is administered by the US Railroad Retirement
Board separate from
Socialistic IN-security and RR retirees don't pay into that pinko program.
However, we pay an
amount equivilent to and well ABOVE that of SS with an equal amount being
paid by one's rail
employer. The benefits are NOT politicized and you rarely hear RR
Retirement mentioned during
the campaign process. All Socialistic IN-security is is a vote-buying
scheme by a "certain" party'
to keep its voters in line--although, it doesn't always work. In my state,
one of the campaign issues
between Clinton's lackey Bowles and Liddy Dole was privitization of future
contributions. Ms. Dole wants to privatize FUTURE contributions so that
workers now can enjoy a better standard of
living out in the future. It also puts more money into circulation for
investment and creates jobs. Anybody with any sense knows that a CD invested
and rolled over for a worker's lifetime will yield
FAR more that Socialistic IN-security ever could. But the Dems don't want
that, no siree!! That would take that voting "carrot" out of their hands.
"Look at what I and MY party did for you--we
got your social s'curity raised to $850 a month!" They have manipulated
retirees for 70 years with
that sh**, and kept them scared so they'd vote a "certain" way.

Well, when I looked for a career--something I would want to do for the rest
of my life, I discovered there there WAS something better and less political
than social shit-curity. Something
that would yield for me almost TWO AND 1/2 TIMES THAT OF Socialistic
IN-security--the rail-
road industry! Not only was it better in yield, but the retirement age is
60--what it was in 1959 in-
stead of creeping up to 67. So, the bottom line is, RR Retirement has
nothing to do with Clinton

or Bush, or Jimmy Carter (yuck). The pols can't intercourse with it -- oh, but they'd LIKE to!

As to those liberal politicians I can't help but picture with pink feathers all over like Hillary, Daschle,
Mondale, , and even Jerry Brown, all I want them to do is go the hell home, get their sticky fingers
OUT of my pockets and their noses out of my life. They don't owe me a thing, I don't want their
cradle to grave care, and I don't want them in my life.

Jerry

BTW, before someone starts that old uninformed line about railroads being "government", you can
stop that right now. Railroads, with the exception of Penn Central/Conrail, are, and always have been private or publicly held, stock-issuing corporations just like any other.

778. RS TRC-485 mod. -adding more channels

Newsgroup: rec.radio.cb
Date: 2002-11-08 01:04:21 UTC
From: Alex <Alex@ipan.net>
Message-ID: <tLRy9.15420$EJ.49386524@news.primus.ca>
Source record: 143535

Hi everyone;
I found on the web an interesting information regarding TRC-485 modification. http://www.radiomods.co.nz/trc485mod.html). Well, it didn't work very well for me -yet.
Does anybody performed such a modification and if so, I'm looking for the following advice:
1. Statement in mod. article says; "pin 31 (open), pin 32 (open), pin 33 (open), pin 34 (close)", does it mean you have to lift pins from the circuit board and keep them "open" (floating) or you have to attach them to Vcc (+5V)? Does pin34 (close) mean it must be attached to GND or to Vcc(+5V)?. Pins 31 before modification is connected to pins 68 and 73 (all these pins are Vdd as per microprocessor spec. sheet) which go to +5V through the diode. Pin 34 I don't know where is attached to, pins 32 and 33 are attached directly to Vcc (+5V). Why mod. suggest to make pin31 (Vdd) open?
2. If successful with above, but without doing any adjustments to VCO, is it possible that at least some the new channels will work when TX and RX (say, from 27.405 to 27.856mhz)?

I really appreciate any help in this matter.
A

I have recently noticed a few trucks coming thru town with the CB antennas tilted forward at an approximate 45 degree angle. What is the reasoning, real or in error, for this procedure? My thought was the taller and higher the antenna, the better, but I'm no expert.....

God Bless, and thanks for your explanations in advance.

Dale

781. Re: Angled antennas on trucks

Newsgroup: rec.radio.cb

From: Bill <wdecker1@rochester.rr.com>
Message-ID: <NwFy9.78468$c51.25271065@twister.nyroc.rr.com>
Source record: 143316

The angled antenna, or under it's proper name "the Chicken Hauler Look" has it's origins in both practical, and urban legend sources.

First, practicality. When this started out, many 48" common whips were pretty wiggly, thin POS, that under the gale force wind of the overdriven double-clutchin' gear-jammin' large car's progress down the super slab, these things bent backwards towards the stacks, (or if it was a Petercar, over the top of the ears of the driver who, in order to keep up the image, was seated on the floor of the tractor with just his eyes visible over the dash), or the cab shield, etc. , and SORT OF changed the polarization of the antenna more to the horizontal. To combat this, a slight (10 degree or so) forward tilt was tried to keep them vertical. When the new 56+ inch Wilson/Penetrator/polished aluminum IUD-on-a-pole type of contraptions came along, the angle kept the tips of the antennas from hitting underpasses, wires, low flying Bears-in the Air, etc..The longer the whip, the steeper the lean-to effect.

Now the theories. The angle of radiation allows the signal to get farther through channel 19's self generated hetrodyne noise level than the guy that you can actually see in front of you, or in your mirrors. Also handy for working that guy in the UK who always says "cheers and beers". It also, properly amplified, can serve as a de-icing ray for the ground immediately in front of your steer axle tires, promoting safety. (But ONLY if you use the Smith System) Crows, sparrows, and the occasional wild turkey no longer snap off the whips, rather they are impaled upon them, providing a handy alternative to the prices those bastards at the TA and Flyin Hook charge for powdered eggs! (Again, with proper amplification, the birds can be cooked as you drive, and RF burns actually do brown the meat, unlike the 3.9 cu. ft. microwave in the 106" American Eagle Bordello Deluxe Pro Edition sleeper. This also saves you on those unsightly jogs away from the on duty-driving line of the comic book.)

But mostly, it's cause it looks
cool.....driver!

If you can't get the CAL adjustment to the V then your SWR will read lower than it actually is. I believe, but I am not sure that there may be another internal adjustment to adjust the calibration sensitivity?

If you can't find that adjustment then there is another adjustment. Just turn the power up beyond four watts and it should calibrate properly.

I've given thought to that, and I have the following questions:

1. - Assuming I have a ham license and a 10 meter radio, who can I talk to? Ham seems to be dying, as some articles in this group suggest, and I'd hate to spend hundreds of dollars on study and very expensive equipment only to find I'm the only one on the road with a radio.

2. - How much does it really cost?

That's why it was written that way. It would exclude
communications relating to someone else's personal or business
axtivities in which the sender were not involved. See my tale
of woe in another post on this same thread.

The GMRS rules were rewritten several years ago in an effort to
exclude it being used for company business communication (wanted
to get them all on Business Radio or even ESMR/Nextel) but ooops,
there were lots and lots of those pesky company licensees that
they had to grandfather somehow.

The main benefit of the rewrite for me was to authorize all GMRS
licensees to use all GMRS frequencies except for two channels
north of Line A, but the latter were grandfathered anyhow if
they were licensed for those channels at the time of the
rewrite (as I was).

Tes on both.

Early in my career with the FCC we cited a railroad for
transmitting non-business communication because train crew
members were monitored having an extended discussion over what
to order for lunch. We received a multi-page reply back from
their legal department citing (with attachments) the fact that
their contract with the union obligated the railroad to provide
a meal to the train crew if certain work conditions existed,
yakety yackety yack, and therefore the cited communication was
in fact official business of the railroad. We had to agree with
them and from that point on we were always quite liberal in
stretching interpretation of "personal and business activities"
as applied to most radio communications. That attitude did not
carry over to the prohibited types of communication in the
Amateur Radio Service (Sect. 97.113), though.

>As a lawyer, I appear to be able to transmit messages concerning my
>business activities (I guess I can call the opposing lawyer
>on his GMRS radio and tell him I'm suing? :->

And there goes security and client confidentiality out the window......

>I can't quite figure out how I can use it "concerning the licensee's ...
>business activities," but I'm sure someone will as it applies to us
>lawyers).

Simple - if you are the licensee. Business activities include
such things as ordering office supplies, when to open the
office on weekends, why to pay the rent on time, etc. I would
steer very clear of discussions imnvolving cases - GMRS is even
more insecure than cellphones.

If you are referring to the client as the licensee, not so
simple. The rules do not permit an "agent" to operate under
the license, only an employee.

>The beer's on me, Ron, the next time you're in the San Francisco Bay
>Area. I'm not likely to be in Vermont in the forseeable future. Brrrr!

How are things going with the SMCBA and the court project? Are
the court and the county clerk's offices ready to be dragged
kicking and screaming into the 1990s? I lost touch with that
project when I moved up here.

That's a tough one, because it varies so much on where you live.
One night, crossing donner pass in heavy snow, I thought I'd ring up someone on 10M just in case. The only guy I could contact was in Pensylvania. :)

> 2. - How much does it really cost?

As much/little as you'd like.

You can get a VHF radio for $50-$100 if you shop around. The FT-1500 is an excellent buy, brand new at $119 typically at hamfests. 50W output, and you can drive nails with the case.
OTOH, a new Kenwood D700 will set you back $600/$700, and you'll want a decent GPS unit with that.

I run Slow Scan TV in the car, plus APRS, and VHF/UHF voice. I've got probably $1500 in the mobile rig. One piece at a time, lots of ebay surfing, and hamfesting helps. My SSTV converter goes for $350 new, $90 on ebay.
The TM-V7a VHF/UHF radio I got at a hamfest for $200 (a great deal!) Two FT-1500s for SSTV and APRS, at about $100 each, TNC for $75, misc bits and pieces.

I used to run an HT in the car, just jacking it into a magmount 5/8 wave antenna, did pretty well with that, but then I wasn't trying to run a county skywarn net and get radar updates in the field, or send "live" pix back to NWS... SSTV tells them what I'm seeing, APRS tells them where I am.
http://www.findu.com/cgi-bin/find.cgi?kc6ete-9

Occasionally, I put one of my base radios in the car, depending on what I'm going out for.
If I'm chasing interference, it will be the IC-R8500 with the doppler DF.
For HF work, the FT-847, since it's got 440, 2M, 6M, and all the HF bands.

One thing that I haven't done yet, is to go mobile, and work some HF SSTV.
I've done a bit of that here from the house, on 14.230, but never tried it mobile.
Soon... Real soon! Soon as I get this current work project put to bed!

We were originally talking about CB, the topic drifted a bit.
I started off asking the originator what it was that he wanted this amp to
do for him.

You're right though, you guys don't get nearly the miles-per-watt that I'm
used to.

Now if you had even a no-code ham ticket, you'be licenced to take the door
off that microwave, couple it to a 30dB gain horn, and REALLY do that. Just
don't use more than a 1500W oven. I've said for years that our power levels
up there need to be dialed back just a BIT!
IMHO, more than a watt up there is not a good idea.

Somewhere in the back issues of QST (I think it is) is an article for
converting a microwave oven to a 2.4GHz video transmitter. The modulator is
a couple of tubes, and sits in the now unused oven cavity, while a probe and
hardline couples the signal out to your antenna.

Since the Antenna plan you gave involves 2 sticks of 3/4" EMT I'll assume
you meant Sawzall or hacksaw where you said "wire cutters"

Right?

you're not suggesting I trim the feed line to match SWR are you? Wouldn't
that fall into the CB myth category? I'm glad you posted that antenna idea,
however. Got me thinking that my next project will be an antenna or 5. I'm
about to finish up my antenna switch and I suppose that switch position
labeled "Experimental" needs something plugged into it right away, hehe.

didn't give any such plan. When I've done HF dipoles, I use the radio
shack antenna wire, it's relatively cheap, and works just fine.

In any case, start long, and trim.

> you're not suggesting I trim the feed line to match SWR are you?

Nope.

>Wouldn't that fall into the CB myth category?

I'm the guy who would tell you to put the bird AT the antenna, and not at
the rig, since you're looking to measure the match from the antenna into the
feedline anyway.

You are talking about the TRC-485 side band mobile. It was the last
side band mobile that RS made. Have a great day! Jon.

I bought a little $20 meter today and a 9 foot length of cheap-ass coax with bonded connecters, and checked the radio again today with that. I still cannot get the needle all the way to the right on CAL on channel 20, but I just turned the knob all the way up. Then my SWRs on channels 1 and 40 respectively were 1.2 and 2.2. So I'm going to play with the antenna tomorrow to see if I can get the readings to match better. That CAL was without audio. I also used the power meter and keyed down it's showing between 2 and 4. I called the shop that peaked and tuned it and he said it has a Mod kit installed too. I'm not really sure what kind of Mod kit it was he put in it, that's not my area of expertise, but I trust the guy, he's really good. He said the Mod kit was affecting the reading on the CB's SWR meter, and to test it with a separate meter. I'm also not sure if the cheap ass coax I had between the meter and transmitter was affecting the SWR. I'm going to check it again tomorrow to see what happens.

It sure sounds like you're running single or double sideband.
DSB is popular because it sounds like AM, you don't need a special receiver.
Like SSB though, you get minimum or no carrier till you talk.

Hard to set up and measure with that though.
Maybe borrow another rig to make the measurement?

The 259's a good idea if you can find one.
You DO need to cut the coax to specific lengths if you want an accurate
measurement though.
It's covered in the 259's manual.

If you use a Antron 99 you got following improvements
The Vertical Diagram of antron99 is very disorted, this is not too bad, it helps to prevent
Signal fading of the opponent station.
The Fading is a term of repolarizing reflections, e.g the Signal reflecting from a wall is different, this cause fading and
timeshifting = fladder
So if some ising Helical Polarized Antennas, you will loose aprox 3DB of signal strenght but you can decrease fading.
So before you buy a weird amplifier, (Any Power above 150 Watt is still a waste of money) you should get a good
Directional Antenna for DX, I use two co phased 8 EL Quads with a vertical distance of 11 Meters on a 25 meter tower.
The Forward Backward Ratio is 60 DB, and a 5 gradient opening angle. With enough power i have the ability to make EME contacts, but this is a other

story.
Total cost of antennas and tower , beyond 3K$. The maximum power that i ultilized was 3KW with a "20xEL519 Tube " homebrew amplifier
, My Future project is a 8 x cophasing antenna on a 11M diameter Rotary disk on the bottom with 8 El Quads, but the problem is the wiring, it must be exactly tuned
i suspect with this setup a Forward backward ratio of 120 DB at a angle of 2C and a gain of 64 DBi
Some Antennas with th&#65533;s type using hams at 50MHz for EME contacts, its the best effort.
Now back to Antron 99
I have a antron 99 antenna, i don't use it anymore i would gift it.

How about the "sheepskin twig warmer"?

The crazy thing was that people would fall for those, the "bowl of water"
and "apple on your antenna" wind-ups... then refuse to believe that a "wally
light" existed. (Wally light was a common term here for the neon light that
screwed to the tip of the antenna and lit up on TX).

That is quite true, however...

There are tens of thousands of newsgroups to chose from, and no way
you can use them all.
So, to spend so much time in a group, you must have either a big interest
in the subject, or such an intense hatred for those that do, that you will
waste your life away trying to upset them.

Those who go on newsgroups for such reasons as hatred really do
need to seek councelling. There are far better ways to spend our
limited time on this earth than just to attempt to spread our own
anger to other people.

Regards,

Peter.

> live?

Sir,
You most certainly DO have a problem somewhere.
According to my Newsreader (OE6), you seem to have replied to
Mopar 93 minutes BEFORE his message.
Neat trick... huh.

What time zone are you actually in?

According to your ISP, -6hrs...
NNTP-Posting-Date: Thu, 31 Oct 2002 16:26:41 -0600

According to your system, -5hrs...
Date: Thu, 31 Oct 2002 15:27:01 -0500

But worse than that, do the maths...
If it was"15:27" at GMT-5hrs, then GMT-6hrs should be14:27... NOT "16:26"
as reported by your ISP.

Check your time zone setting in Windows.

Regards,

Peter.

Like you do when reading OE instructions?

> > Anyway if OE is not up to the job then try something else.

Like what?
I have a great e-mail Anti-Spam program, but I have not seen one
that can do the same job with news messages.

The problem is that any filter that can block someone who
keeps changing the details in their header, will also block
other people. You can set an e-mail filter to kill anything
that does not match a set requirement, but that is not
appropriate for a newsgroup where subjects change
and new people can appear on the group.

Anyway, we both know that if there were more filtering
possibilities, George would change whatever he needed to
so that he would get through the filters.

> > As far as the stuff getting down loaded anyway, for me that's not a

Never mind the "Fat suit", use a couple of cushions. A few years back, me and my Son did that for a laugh... one cushion up the jumper, one down the trousers. We looked like "Tinky Winky" and "Po".

We have a big fireworks display near here just before Halloween every year. We watched that one on the Saturday, then on Halloween, I took my children to a small local organised display. They dressed up as a witch and some sort of ugly creature of the night.

We also have other fireworks displays around November 5th, but they are usually smaller displays using normal fireworks. Many of these smaller displays are free to go and watch.

Regards,

Peter.

"Jason Cox" <jasoncox@email.com> wrote in message

Jason does the radio have variable power knob? If so turn it up, this will raise your power which is similair to what you did when you put audio into it, if it doesn't have the variable power knob and the radio has been tuned assume they lowered the deadkey of the radio, which in turn will not allow the Cal to go all the way over to the right because when the meter is actual set it is done at the factory stock 4 watts . Either way sounds like the swr is ok since you put audio and still got a low reading.

: On the Cobra 29 the CAL meter looks somthing like this _|_|__|__V with
: the V marker on the very right. Even with the knob turned all the way
: up it will not swing ove there. I tried keying the mike, and emmited a
: fairly loud audio tone to up the RF output, and this caused the needle
: to swing up alot.....I adjusted the CAL knob from there into position
: and then calibrated the meter like that. I still get SWR readings of
: 1.2-1.3 with it calibrated this way, and even with the CAL knob turned
: all the way up it barely moves the needle, getting readings from
: 1.3-1.5. So I'm guessing the SWR on this setup is exceptionally good,
: I must have a great ground plane. I've had this same radio setup on a
: 74 GMc pickup and a 97 Ford Taurus and couldn't get readings below
: 2.0. I'm hoping the CAL problem isn't caused by low power output, I've
: had the radio peaked and tuned at the local CB shop. I'm really hopin
: he didn't screw up. But, maybe, just maybe, I just finally got the
: right setup..... :)

: If you can't get the CAL adjustment to the V then your SWR will read
: lower than it actually is. I believe, but I am not sure that there may
: be another internal adjustment to adjust the calibration sensitivity?
:
: If you can't find that adjustment then there is another adjustment.
: Just turn the power up beyond four watts and it should calibrate
: properly.
:

Thats what I say look for a variable power knob on the radio or the tech who tuned it lowered the deadkey and the meter itself is now out of cal since it was set using 4 watts.

Jason,
By the sound of it, you may be trusting your 'tech' too much. What ever he has done to the radio has certainly NOT made it more usable. I would suggest you stop what ever you're doing till you can get the radio put back to normal. Most of the so-called 'tune ups', 'super tunes', etc, are mainly to seperate you from your money, they do very little 'good', and as you are seeing, more harm than good.

Dale,
There are two reasons for tilting antennas such as
you're seeing. The first is for 'looks'. What ever
turns you on, I guess. The second is so that at speed,
the antenna doesn't tilt backwards and change it's
input impedance. The idea is that they should stand up
straight when moving. Tilting the antenna so far
forward that they are no longer straight when moving is
more of a henderance than anything, doesn't help a bit.

I received a number of emails regarding this post and thought I would clarify a couple points.

1. There are two different types of grid current distortion:

The first type is caused by the abrupt change in the transconductance of the tube as the grid begins to conduct. Power tubes specifically designed for linear AB2 operation have very little, if any, change in transconductance when the grid goes postive. On the other hand, one of the characteristics of sweep tubes is their significant -increase- in transconductance upon grid current transition. This is a benefit for operation as a horizontal deflection amplifier, which is the purpose for which they were designed. But it is FAR from being smooth enough for sweep tubes to be considered linear for AB2 operation, AF or RF.

This type of grid-current distortion is a product of the tubes amplification characteristics, and cannot be prevented, filtered, or in any other way avoided except to prevent the grid from going positive.

The other type of grid current distortion results from the abrupt change of the input impedance of the tube as the grid begins to conduct, which distorts the signal at the input. This happens with common-cathode amps because the input is on the grid, and any change in grid impedance directly affects the signal. But it also happens when the input is the cathode (grounded-grid) because the grid current is sourced from cathode current.

This problem can be limited by the use of a signal source with very low impedance, well below that of the tube's input when the grid is in full conduction. The result is that any change of the tube's input impedance becomes insignificant, and distortion of the input signal is minimized. This works very well when the tube's input is the grid, since the grid has a relatively high impedance even during conduction. However, the input impedance of a grounded-grid amp is low from the get-go; and since the input is actually the load for a power source, the signal's source impedance must be matched to the input impedance of the tube for full power transfer. Therefore, reducing the source impedance is not very practical for a grounded-grid amplifier, and AB2 operation of a grounded-grid amplifier should not be expected to be linear.

2. The addition of cathode resistors (typically 10 ohms) on parallel grounded-grid tubes is used to equalize the cathode currents between the tubes, a practice which Skippy considers "dated". They do NOT cause degenerative feedback as they do in common-cathode amplifiers,

and therefore do NOT improve the linearity of the tubes. Quite the contrary: A cathode resistor on a grounded-grid amplifier -increases- the impedance of the signal source by the value of its resistance, and therefore -increases- the distortion caused by grid current. Any grounded-grid amp designed with cathode resistors is not intended for linear AB2 operation. If it was, then it was not designed properly.

I would think that tilting it forward would push the lobe down in
front at the expense of raising the back lobe. Maybe Jay can jump in
here and clarify...

Ho ho ho! This is funny. A full blown liberal accusing me of being a socialist! Ha hah! That's got to be the funniest thing I've seen in a long time.

Now I know you've got to be a snot nosed 20-something. Anybody with any age and wisdom soon realizes just how naive and idealistic the views of the left really are. Socialism has never worked in any country that has tried it. And this country would be wise to remember that. Instead of whining to the government to provide for them, people need to take responsibility and provide for themselves.

Social Security? Since when was social security ever meant to be a total retirement package? It was only intended to be supplimental, not a senior citizen equivilent of welfare...

Come on, Mr. Hammy, you know coax length does not matter unless
you have an antenna mismatch. Then 1/2 wavelength (minus velocity
factor) will mimic the characteristic impedance at the other end
of the coax.

Have you been staring at your 514nM antenna again?

>furiners(foreigners)

You got the right answer but with the wrong reasoning.

Except for emergency situations and certain paging operations,
one-way communications are not permitted in GMRS.

HOWEVER, the rules have always been interpreted to permit
intercommunication between stations, not restricted to those
stations within a single system, if the message content is
related to the personal business of the licensee(s).

The rule wording is a bit confusing for someone who isn't all
that familiar with how FCC rules are interpreted, but that's
the kind of stuff that I do for a living....piece of cake.

Ignore the SWR meter on the radio and pay attention to what the SWR meter
tells you. If your SWR is 1.2 on channel 1 and 2.2 on channel 40, your
antenna may need shortened a bit.

> So I'm going to play
> with the antenna tomorrow to see if I can get the readings to match

Is that 2:1 and 4:1? If so, sounds like there's a mismatch there somewhere,
one that will eat up a lot of power. The best thing to do is not only try
it on channels 1 and 40, but also channel 20 in the middle of the band to
see if the SWR dips between readings on channels 1 and 40.

You should also note those antennas are quite long.
Stood upright, they'd probably be taller than the wagon itself, therefor,
prone to hitting low bridges.
Years ago when you couldn't find 4ft antennas that was the thing to do.
So with a 5ft whip mounted at 8ft above ground, you can quickly see that
antennas would hit low bridges.
Now with the cabs being as tall as the wagon, there's no need for the driver
to allow his antenna to be a height checker as some safety experts say you
should do.
IMHO, any driver who has to resort to that approach shouldn't be on the
road.
Never rely on antennas. Get out and look before hitting the damn thing.

Mostly though, it has to do with wind resistance and looks.

Yes, it would. The front lobe would be somewhere in front of the truck on the ground (which would actually splatter the front lobe out forward, who knows what kind of pattern it'd have?) while the back lobe would be aimed up into space at a 45 degree angle. I'm sure a lot of that pattern would be wasted by shooting off into space.

Hello Mark:

When the high voltage rectifiers came out in the sixties, a lot guys did that to try to increase the output a little, in the Tube type CB radios. These "Silicon HV Rectifiers" where advertised in Ham and CB Magazines, as a direct replacement to the rectifier tubes, to add power, make you better looking and reduce your taxes. They only increased the power very slightly, and not worth the risk of needlessly raising the B+ voltage on other components.

It only made me better looking, be advised.

Jay in the Mojave

Credentials:
Ham, CB, Scanner, & Shortwave radio enthusiasts
Owner 1966 Ford 4 x 4, 460 C.I., no smog shit, Loudest Public Address system in the world. (it helped putting the 2 loud speakers on the roll bar, looks great with the Co-Phased 96" whip antennas)
None paid member of local TVI, RFI, EMI, Oh ee ah ah ah ting tang walla walla bing bang committee.

> necessarily ISP's.

Oh, now you change gears! First it was ISP's, now it's how I GET to my
ISP. You really do want to make mountains out of molehills.

Tha fact remains that I am using the same ISP, which provides my
newgroup server (for which I pay a yearly subscription fee), for the
last 7 years. How I get to it, whether from a dial up line, a cable
modem, or through a T1 line is of no consequence. And if my ISP wants to
change their newsserver, that is something that's out of my control.

>
> >I use my

> have it both ways.....hahahaahahahah!

Well sure you can. It doesn't take much in the way of brains or guts to
hide behind a pseudonym, and brag about all sorts of illegal activity.
If they can't trace you, what have you got to lose? If you were truly
proud of what you did, and felt that there would be no repercussions,
you would not be afraid to use your real name.

>

> With several other access sites employed by you.

Access sites? What are you talking about? The ISP is the provider of my
service, and the one who grants me access to this newsgroup via their
newsserver. How I get to it, again, is immaterial.

It's funny that this so-called "majority" isn't busting down the walls
offering up words of support for you. The screen is quiet on that front.
I do see several detractors though. People, whom, you are quick to lump
into the "trouble posse" catergory, simply because they challenge your
viewpoint.

> The fact that you
> are hammie trolls in a cb group crying about identities is plenty.

A "troll" is someone who posts an inflamatory message, designed with the
specific intention, of starting an arguement. Countering your "free
spirit" approach to illegal radio practices, hardly fits the definition
of trolling. If the truth bothers you so much, maybe you should find a
new hobby, where you don't have to wrestle with your conscience, or try
to convince other people that you really aren't breaking federal laws.

And the fact still remains that I am not the one hiding behind a phoney
name. You want some credibility, try using your real name.

> You were defeated once asking this, but we can ask again...all those
> agreeing with Dave's definition of "federal criminal" (IE: Anyone who
> has ever received a notice of a rule violation from the FCC) speak now
> or forever hold you peace.

So you still maintain the attitude that it's only illegal if you're
caught? That's a shallow defense. Many drug dealers and thieves think
the same way.

I am denying that I know each and every nuance of internet protocols. I do have a fairly good knowlege of computer hardware, and have built several from parts. I am fairly adept at Windows NT networking, and related services, and have a working knowlege of UNIX. But I still don't know each and every nuance of internet protocols. I don't study message headers looking for suspicious information. I'm not paranoid.

> >BTW, if you enter "Dave Hall" in your Google >searches, you're going to

Hmmm... you ask me whether a phone number that was used by a business 7
years ago is still valid, and then act surprised when I don't know? If
you want to know that bad, call it and find out. It's not my problem.
Should I Email Wayne and let him know to expect you?

> education...hahahahhahahahaahahahhahhahahaahahahah!

I hope you like the taste of shoe leather. Because you sure stuck you foot in deep on that one. How strong does a signal have to be to shut down your receive on all channels? How strong do you think a 100 mW transmitter's signal is at 30 feet? I'll tell you, it's not strong enough to desense a good receiver front end. At my location, it's equal to about a +20 db over S9 signal. I don't start to get receiver desense until the needle hits +40 db over.

>
> Make up your mind. YOU claimed, not long ago, that my dx activities had

> is really straining in that overdrive.......hahahahhaahah!

A half mile away is what it would take for a legal 4 watt radio to equal the signal from a 100 mW transmitter at a few yards. I should have realized that you would'nt have understood that. But you haven't answered the question, does someone a half mile away, plug your ears on all channels?

>
> Poor side step,,,you have done better.

> and I corrected the statement.
>
> >No you countered the statement, but you were >not correct.
>
> Sure I was. You are applying hammie technicalities (hammie rigs) where
> they don't apply.

So you are now claiming that CB receivers are way worse than ham receivers? Some of your "big radio" brothers may be a bit upset with you for making that sacriligious comment.

But more to the point, I have good quality CB radios as well as ham radios. They don't desense when a 100 mW signal is in the back yard either.

>
> > Stay with argueing the semantics of illegal >operation. Technical
> discussions are way >beyond your abilities.
>
> Then you have much to learn. You and George must share the same drinking
> water.

I am always willing to learn. I would be interested in your opinions of modulation techniques. The pitfalls of phase modulation versus true frequency modulation. How you equalize your audio to produce a flat response, and which SSB filter width provides the best compromise between signal clarity and bandwidth performance. How about DSP algorithms? You want to talk technical, I'm ready.....

>
> >So, on one hand, you make the claim that I >could have planted the
> device a few yards >away without requiring trespass, in your yard,
>
> No, I never made that claim at all.

Uh, yes you did. You made the claim that a single channel remote control transmitter would blank the entire band if placed a few yards away from the local's antenna. I countered that that would have required me to trespass on his yard. To which you replied "not in my yard". Now how does one interpret that? You distinctly implied that I could get within a few yards of your antenna without tresspassing on your yard.

Oh wait, here you go explaining it again:

> I claimed the device would be heard across all 40 within a few yards of
> an antenna....YOU claimed it would involve trespass...I claimed not in
> my yard, it would not be trespass.

You talk about MY contradictions?

So which is it then? Do you have a small yard or will I have to tresspass to get to your antenna?

>
> >Do you mount your antenna, on a pole at your property line?
>
> I may not have an antenna.

That would certainly not be conducive to radio DXing. Oh, I get it. You're being clever. You operate strictly from a mobile eh?

> >Unless you want me to plant a device in your >yard.......
>
> Sure.....you can try, but I must warn you in advance..........Florida
> has laws that differ a bit from Pa.........it would be a shame to tell

> left.

Who left? See what I mean about making wild accusations? You know
absulutely nothing about my family life, and here you go making
assumptions. And if I correct you, by refuting your wild assumption,
you'll accuse me of "lieing". You really do live in a fantasy world.

>
> >Do you think I would give you something, if I >had something to hide?

Gee, you understood that, without further explanation. Yet Twisty
accuses us of having the comprehensive communications problem.

No worry, his next ploy will be to accuse you of being an "alternate"
me, using a forged account....

What is Jay amobile antenna expert? when the antennas tilted forward they straighten up going down the road, as compared to being bent back what situation is better for driving, if youask me the ones where the antenna are straight up and down. I don;t need to ask Jay that one. LOL

If you didn't have a mismatch, you wouldn't need the 259.

> Then 1/2 wavelength (minus velocity
> factor) will mimic the characteristic impedance at the other end
> of the coax.

If you want accurate readings, you need to trim the coax to frequency, as
stated in the 259 manual, they detail it quite well.

> Have you been staring at your 514nM antenna again?

I'd have serious medical problems if that were the case.

If he's not getting enough carrier to adjust the meter ("reduced dead-key") then it sounds very much like the radio's been modded to supressed carrier or double sideband. It wouldn't be that hard, and I've heard that it has some significant advantages.

I'm sure the radio started out as a simple AM radio.

Arrived Friday at 12:30, relaxed around the pool.
Walked to around the Marina. checked the incoming
boat for catch. Some really big Tuna saw a 195lb &
a 165lb Tuna.
Now the day you posted it was a hell of a rough
day out. 10 to 12 foot swells and high winds. But we did
go out some 35 to 40 miles out to Gordo Banks, hit a
couple of schools of tuna average weight around 50lbs.
The largest that day was 69lbs, but most were around
30 to 40lbs each. Caught a couple of Marlins too, but we
always release them.

A very simple easy antenna, just get it up
as high as you can to help avoid spurious
rf from effecting your neighbors. Also run a ground
wire from it to a ground rod, that helps with the
inherent spurious rf problem.

Actually no George. When you are kill-filled
your posts are not being seen by that individual.
If you X-no, they are not being saved, so you
can't see them on the archives. If you stuck with
on screen nic, x-no the posts I and I'm sure
most others would just kill file you. I was gone
for only a week, some 979 posts and at least
1/3 were deleted because of my kill files.
But you being the troll, so far have changed
your nic at least 5 maybe 7X's already just so
you can by pass kill files

Actually George I have never sent one
complaint to Comcast about you, keep dreaming
that your important. As for double standards?
You are not the FCC, if you have a complaint
about my "views" about freebands, export radios
and amps, send a letter to the FCC, not cry &
whine about it here, like a troll.

Not really. The radio was modded for 'swang', or 'NPC' as some like to
call it, and is nothing more than sugar-coated overmodulation. It's a
practice that was tried and abandoned over half a century ago because
it wreaks havoc on the AGC/AVC of the receivers.

>I'm sure the radio started out as a simple AM radio.

If one wants and AM radio, they should run AM. If they want SSB they
should run SSB. If they just want to make a lot of noise, they should
stop by their local CB shop and get their rigs 'peaked and tweaked'.

Twistedhed <twistedhed@webtv.net> wrote in message
news:5021-3DCBC253-274@storefull-2312.public.lawson.webtv.net...

Why are so many considered federal employees? I specifically remember a
case where an engineer was robbed and killed and it was a federal
case,,,maybe a mail train or contractor?

The ONLY rail employees that could be considered federal employees would be
AMTRAK which
depends on federal subsidy to keep it going. The rest are public
corporations just like IBM or General Motors, have boards of directors, pay
dividends, and take their lumps just like any other
private company. Look in the stock pages of your local paper. Look up rail
companies such as
Norfolk Southern, CSX, BNSF and the like. The only company other than
AMTRAK that ever
was under Federal subsidy was Penn Central/Conrail which, under the
leadership of such men as
L. Stanley Crane, weaned itself off the dole and became a free-standing
corporation. It was later
"divided" up and purchased by Norfolk Southern and CSX along the lines of
the old Pennsylvania
and New York Central System. It was from the Penn Central bankruptcy that
the public got the
mistaken idea that all railroads are "federal". They are NOT and never have
been. Just as the Fed
bailed out Chrysler, they bailed out ONE road, but the mistaken notion of
government ownership of railroads was given to the public, partly due to the
inept media. I run into that to this day. My
pension has nothing to do with the benevolence of goverment; it is due to
the fact that I paid MORE into it and so did my employer. Up until last
year, the retirement age had crept up right along with Social Security. Any
employee hired after 1983 was at the mercy of whatever retirement age
happened to be in effect for both systems. Employees hired prior to 1983
could retire at 62 with full benefits. IF his wife was a homemaker, she was
entitled to a check equal to about 1/2 of what he made, so that, for
example, it was possible for a couple to retire on around $2700 per month
give or take! That, of course, depended on his retiring at 30 years/age 62.
Because the system IS VERY solvent, there were some changes made in
investment strategy and it was found that the age could actually be lowered
back to 60 where it was until 1983. Now $2700
doesn't make a retiree wealthy, but it beats the devil out of what the
government plays politics with.

And, yes, it galls some of those pols that 1) rail retires actually get that much, and 2) that they aren't
able to get their fingers into the fund like they do with SS. My poor old Dad gets not HALF that.
What keeps the politicians at bay is the fact that the rail system WORKS and it is SOLVENT so
they can't find an excuse to tamper with it, and the rail companies AND their employees won't stand for it! Can you blame me for going to work in the rail industry?

Jerry

The sale of ham radio equipment to unlicensed operators is illegal.
Importation of banned radio equipment is also illegal.
A $10,000 fine will be imposed for the possession of such equipment.
Just a friendly reminder to all of those considering purchasing said
equipment.

Because rectifier tubes use high filament currents and typically need
replacing more often than the rest of the tubes in a set. Eliminating
that tube saves the cost of replacing it over and over, and also lets
the transformer run cooler. You might get an increase of a few volts,
but nothing significant -- the impedance of the transformer is usually
the voltage limiting factor of a HV power supply under load, not the
voltage drop of the rectifiers.

You mean 1.2:1 and 2.2:1? That's not that much of a difference, but I doubt the meter on the radio itself would be accurate enough. I'd rather trust a dedicated SWR meter.

Well,

They say that curiosity killed the cat, so......I visited the webpage. What I just can't fathom is the point of all the fingerpointing and flames. It isn't doing any good. You would be better off just to leave it alone. Coming on here arguing about "illegal" CB is not helping anything. Everybody on here knows I don't agree with illegal operations, BUT word-slinging isn't gonna change it. People are going to do what they are going to do. All I can do is try to operate within the laws that govern MY own operations, try to get along, and help people with questions if I can. That's what YOU should be doing. If you want to "change" what someone is doing, perhaps you should use less vinegar and more maple syrup. You might be getting a big kick out of jousting with CBers, or maybe it makes you feel good or more of a man (mistakenly). People messing with your web counter and using obscenity, etc. is caused by your own tactics. I suspect your "association" with FCC is mostly in your own mind. After all, most of us have Riley's email addy and *could* do the same thing you (are?) I mean no disrespect to you, I only disagree with your tactics. < end of quote

>I don't know how that reflects in the message >headers, but I use it >the same as I always did.

Wanna split hairs? Forget the ISP. You have accessed this group by many different avenues.
>No, I haven't.<

Hahah.... your headers say differently.... another clear contradiction. Just like you claiming you didn't know what your headers said, but you were injecting things into your headers while maintaining you didn't know that they looked ....carry on.....
I'll hold that one.....you can always claim "By golly ah guess ah did....fergut abote that thar won!"

>You look too hard for things that aren't there.<

When they are there, you lie and when called on it claim you forgot. Try reading only what is there and not what your unpopular views limit you to.

>But suppose I DID use a different ISP, what's >the difference,

It would make you liar.....again....and we are talking access, not necessarily ISP's.

>Oh, now you change gears! First it was ISP's, >now it's how I GET to my ISP. You really do >want to make mountains out of molehills.

>Tha fact remains that I am using the same >ISP, which provides my newgroup server (for >which I pay a yearly subscription fee), for the >last 7 years. How I get to it, whether from a >dial up line, a cable modem, or through a T1 >line is of no consequence. And if my ISP >wants to change their newsserver, that is >something that's out of my control.

>I use my
>real name, and my E-mail is still the same. >Unlike you,

Ha! My email has always been at webtv.

>The difference is that I use my real name.<

That's what hammies do.

> You hide benind a "handle"
>no need to conceil my identity.

That's what cbers use....handles..........your interpretation of such use is a personal problem, nothing more.

Identity? What does identity even remotely have to do with anything? You're in cb land junior, and cb don't use propers.

>Gee I wonder why? Maybe because they have >something to hide?

(Giggle) Okaaaay!

>Such as illegal operation?<

Well, which is it, am I hiding or bragging about breaking the law? Can't have it both ways........hahahaahahahah!

>Well sure you can. It doesn't take much in the >way of brains or guts to hide behind a >pseudonym, and brag about all sorts of illegal >activity.

Guts? What does guts have to do with it? You are becoming increasingly hostile by the day.

> dIf they can't trace you, what have you got to >lose?

If you had any of these "brains" you speak of, you would understand webtv is indeed traceable. If you had any "guts" you speak of, you would do what several others on this group have done, knock on my door or meet me in person to satiate your addiction concerning identity and personal lives of cbers.

>If you were truly proud of what you did,<

"IF" the queen had balls she'd be king..........

>and felt that there would be no repercussions, >you would not be afraid to use your real name.

Repercussions?(Roar) From who? YOU? What would you do? Ignorize me to death?
Come on down, Shore Drive, last house on the left before the plant.
Again, you bluff has been called.

>I can't be responsible for the hardware >changes that my ISP does.

Sure you can. Obey the TOS set forth by the company you choose to access the group.

>What rule have I broken?<

Dunno.....why have you had so many separate accesses?

>I have used the same ISP for the last at least >6 years now.

That wasn't the question.
See what I mean about the irony of being licensed for that of which you fail to demonstrate a coherent comprehension for....

With several other access sites employed by you.

>Access sites? What are you talking about? >The ISP is the provider of my service, and the >one who grants me access to this newsgroup >via their newsserver. How I get to it, again, is >immaterial.

You would like to think so, but not everyone shares your limited knowledge that you have demonstrated a preponderance for being unable to grasp anything not already retained n your tiny mind.. ..it's as if no new information can be ingrained on your brain,,,almost like it's at full capacity and the result is an overflow of bowel and waste from your mouth every few posts in an attempt to make room for the new info coming in.....

> What, I'm not allowed to express an opinion? >That's too bad for you if that's what you think.

You have demonstrated a preponderance for not knowing what the majority or I think.

>Right......which is why they are so vocal.<

They are so vocal cause you are blackening the eye of hammie radio each time you attempt more bullshit, but go ahead and continue to employ thinking only as you can..after all...you fail to see yourself as the majority do.

>You still haven't learned by your own words:
>Sorry twisty (Ed change),

Apology would be accepted if it were sincere, but as you have clearly demonstrated, you are a liar and a hypocrite. Your "ghost" support don't cut it. And if you didn't feel so alienated and defeated, you wouldn't look to others to validate yourself.

>I'm still waiting to hear from that "majority" that >you seem to think >you represent. But you'll have to bring them >here. I'm not going to Mars anytime soon.

Space shouldnt be that foreign to you, all things considered. Yes, I maintain I represent the majority of cbers, hence my views and words popular enough to appear in print concerning cb.

>It's funny that this so-called "majority" isn't >busting down the walls offering up words of >support for you.

Truth never needs support.

>The screen is quiet on that front. I do see >several detractors though. People, whom, you >are quick to lump into the "trouble posse" >catergory, simply because they challenge your >viewpoint.

Your lies are flowing freely. Again, I have done no such thing. The only posse members I have mentioned are the ones named by "Arron", such as YOURSELF, N3CVJ..... Lelnad C. Scott KC8LDO, Frank Gilliland, and Dogie Adair N8WWM...there are my detractors and YOUR support...the lowest forms of examples that hammie radio has to offer. You ought to choose your friends more carefully, but then again, frolicing with the trouble posse would be just what we woud expect from one who had an illegal hack shop with a sex fiend...and all that talk you done about morals.....you are right, this is becoming fun.

The fact that you
are hammie trolls in a cb group crying about identities is plenty.

>A "troll" is someone who posts an inflamatory >message, designed with the specific intention, >of starting an arguement.

Calling names has always been a forte of yours until I began illustrating how it detracts from any communication skills you claim to possess. Glad you recognize the act as such.

>Countering your "free spirit" approach to illegal >radio practices, hardly fits the definition of >trolling.

"Countering" does not necessitate calling names, lying, or making false attributions and continually attempting (but failing, nonetheless) to put words in anothers post. You have done it consistently.

>If the truth bothers you so much, maybe you >should find a new hobby, where you don't >have to wrestle with your conscience, or try to >convince other people that you really aren't >breaking federal laws.

The fact that my conscience doesn't bother me is why you are entertaining and displaying such feminine,,er,,,problems and behavioral traits.
The second fact that you appear to have dropped out prior to a proper introductory, alone education, concerning civic class and applicable laws of the United States, is trulyour finest moment to date.. It isn't me you need to convince of you and N8's views...it's the rest of the world. Even your own posse members don't agree with you on what constitutes a federal criminal. Maybe ask your daughter to explain it to you.....better yet, go get her,,,,she could carry on a more mature conversation. Maybe you can ask hammie ex-communications lawyer Phil Kane to educate you on such matters so as to avoid leaving so many electronic records attesting to the sterotype of hammies the public at large holds.

>And the fact still remains that I am not the one >hiding behind a phoney name. You want some >credibility,

Never really gave it any thought, as those who take issue with what I say matter the least.

>try using your real name.<

Tell ya' what, just like several others, come on down anytime and we can be properly introduced. This pre-occupation with my identity held by you and Frank borders on lunacy.

You were defeated once asking this, but we can ask again...all those agreeing with Dave's definition of "federal criminal" (IE: Anyone who has ever received a notice of a rule violation from the FCC) speak now or forever hold you peace.
Hokey Dokey, Dave?

>So you still maintain the attitude that it's only >illegal if you're caught?

Never maintained that, Dave. This is another prime example of you lying again...I suppose I should thank you, but when you get on a roll, I need just sit back and watch.....you sink yourself almost as good as Lelnad, but not quite.

>That's a shallow defense.<

So why did you pput it forward? Is that your excuse for running your Davemade?

>Many drug dealers and thieves think the same >way.

Considering your admitted association, personal and professional with a sex fiend, it is of no surprise you are familar with the way this type element of society think.

>And I still don't understand the meaning of the >term "slurp"......

Look at your current header. Quite different from at least 5 or 6 others, and that's just what was sent. there's probably more.

>Maybe my newserver has a dynamic routing. I >don't know. I'm not a pencil-necked internet >geek, so I really don't know the nuances of >each and every routing protocol.

Really? You mean someone was forging you when you were attempting to educate another and bragging on your computer prowess abilities?

>When have I done that?<

Are you denying this, Dave?

>I am denying that I know each and every >nuance of internet protocols. I do have a fairly >good knowlege of computer hardware, and >have built several from parts. I am fairly adept >at Windows NT networking, and related >services, and have a working knowlege of >UNIX. But I still

don't know each and every >nuance of internet protocols. I don't study >message headers looking for suspicious >information. I'm not paranoid.

You also claimed you didn't know what your headers looked like while you were interjecting with your own "spew"s into them.....so your claims are highly suspect at best.

>BTW, if you enter "Dave Hall" in your Google >searches, you're going to find many.

Not in rec.radio.cb there aren't...and there is only one N3CVJ.

>At least I let you know who I am. <

Oh, now you LET me know,,,just like you LET me know you had a hack shop. No Dave, you didn't LET me or allow me anything. You were merely shown that you are no good to hammie radio with your neurotic obsessions conerning personal lives of internet strangers based on their topics of choice.....what a lulu.

>Which is far more than you let on.<

Last house on the left.
Iron gate.

So you advertised radios or sale for THEM? Why, if you were an independent contactor?

>Besides, these were friends of mine. <

Nice friends...didn't you claim one was a sex fiend?

>What he does with his personal time, with >other consenting adults, is no business of >mine.

YOU mentioned it and shared it with us so it clearly illustratesyou have indeed made it your business, just like you make the private lives of innet strangers your business.....a very sad hammie with a severe nose problem.

>His internet "fancy"<

Dave, we really don't need to hear, nor do we care about your defense of your pervert sex friends.

We can think for ourselves, Dave, thanks.

>SOME of us can. I have doubts about you >though.

What you think or guess stimulates all of our comedic traits.
You best showed this with your shared thoughts of my age.
You're a young 'un!

>No more than if I were recommending a >website that sells gear, or a >specific radio brand.

(snicker) Okaaay! You like the brand of sneaker you wear so you will use it as a sig.....hahahhahahaahaahahhahaha..beautiful!

>It would be appropriate if this group were >rec.sneakers

I didn't mind when Dogie had the "T" tattooed on his forehead, and I didn't mind when he made Lelnad and Freank get theirs, but this one of the "T" on your ass has me a bit uneasy.

Sure it is.....but you are here trying to tell us it's what you claim it is and not what we see.....hahhahahahhahaahahhahahahahahhahah...get over it!

>Some people see pink elephants in trees too, >but that doesn't make it true.

Most people don't associate with known sexual deviants either, but that didn't stop you from befriending one and going into business with him and retaining the moniker "friend" when referring to him.

Wrong. You posted the business name and phone number as part of your sig. with no mention of "other" guys anywhere in any of your posts. Is the phone number still valid? Was it your phone number at your house?

>The name of the business, were the initials of >the two guys who >"owned" it.

Again...merely your unsubstantiated claims which have been shown to predominantly be lies by our your own self-contradictions.

> My name is not associated with it anywhere. >And no, the >phone was not mine either. I don't know if they >are still valid. Call >them and see. Ask for Cliff or Wayne.

You don;t know if it's valid but want me to ask for someone by name. Gee Dave, that ranks right there with your backslide when I took you up on your offer to meet your "FCC guy".

>Hmmm... you ask me whether a phone >number that was used by a business 7 years >ago is still valid, and then act surprised when I >don't know?

Not at all. I WAS surprised that you told me who to ask for, especially after sharing with us that one is a sexual deviant. Which one is the perv so I know who not to ask for should I decide to call?

>If you want to know that bad, call it and find >out. It's not my problem.

Sure it is, Dave, you made the statements. If it wasn't a problem, you wouldn't have had the need to snip the part where I said I don't concern myself at all with anything you say anymore. I DID give you the benefit of doubt, but your backslide concerning the FCC guy and your lies coupled with your background
posts and self-contradictions nullified that.

>Should I Email Wayne and let him know to >expect you?

Not if he's the perv.

>Well does freeband DX violate FCC rules? A >yes or no answer is all
that's required.

Pigeonholing doesn't work and I have never allowed it, hence the "Aarons
dogs" humping my leg.

>I'll take that as a "Yes"

Cool.

>The difference was that I was at least >attempting to correct some
>really BAD advice and modification work,

With "better" mods? What makes your mods better?

>By virtue of my education, and my possession >of many pieces of
>commercial grade test equipment.

Here we go...another jewel..hahha..I can't believe the ego of some of
you cryabies that bicth and moan...no wonder we are superior in every
facet. We hit you where it hurts the most, in your false image you have
created of yourself....hahahahhaa!

>The quality of my work, and the satisfaction of >my customers speaks
for itself. Whether or not >you choose to accept this, is of no
>consequence to me.

It must be or you wouldn;t
attempt to so vehemently defend such statements.Now who here is
familarwith your work? What's that? No one? So we have only your WORD
(chuckle) that you are above the other techs in modification
capabilities...OOOOOOOOkaaaaay!

Are you saying you didn't, Dave, sell any illegal radios? A simple yes
or no will do.

>*I* never sold any radios, as part of this >business. Illegal or
otherwise.

And you were NOT involved in any aspect of selling radios at the time,
correct Dave?

>That is correct. Selling was strictly handled by >the other two guys. I
never got any e-mails >from anyone on the internet inquiring about
>anything, so I was totally out of the loop.
>secondly, I was not involved in the sales end.

Hmmm....so those posts alluding otherwise was just to "drum up business"
that you weren't really involved in, didn't make any money at, and did
it as a community service....(ROAR)!

>As a service to the business, which was >operated by personal friends
of mine.

One of which is a sexual deviant. So much for whatever you ever have to say concerning morals.

We see how you rate your friends.....one is a sex fiend and ...what about the other?

>The other is a ham, and a fun guy to be >around. And that's all you need to know.

Actually, I didn;t need to know anything about the other, especially that he was a psycho sex sicko, but it;s great to see you in a sobering moment realizing you offered way too much with that motor mouth of yours that somehow always bites you in the azz...

> A remote car control is effective on only one >channel.

Not true. Get it within a few yards and it can be very effective across the band.

>Not if your receiver has a decent front end. <

This coming from an alleged "tech".....man, when it rains it really poors on your head, huh Dave? We are talking cb. Again, you're wrong. Spread some of that wisdom and experence you claim by education...hahahahhahahahaahahahhahhahahaahahahah!

>I hope you like the taste of shoe leather. >Because you sure stuck you foot in deep on >that one. How strong does a signal have to be >to shut down your receive on all channels? >How strong do you think a 100 mW >transmitter's signal is at 30 feet? I'll tell you, it's >not strong enough to desense a good receiver >front end.

"Good" is relevant.
And the "shoe leather" is applicable ONLY when inserting and substituting YOUR distance instead that of which was actually claimed. See below..then have some crow...you can use Lelnad's bowl...he's currently...um'...disengaged.

>At my location, it's equal to about a +20 db >over S9 signal. I don't start to get receiver >desense until the needle hits +40 db over.

What rig?
Most straight cb's will bleed like stuck hog when such a method is employed within a few yards of an antenna. YOU said 30 feet, the distance of 10 yards.....*I* said a few yards...."ten" is not a few. My claim stands. Now have some crow

Make up your mind. YOU claimed, not long ago, that my dx activities had the potential to splatter across the BAND.............besides assuming I am running extra power,
you can plainly spot another of your self-contradictions.
Splattering the band and interfering with legitimate radio services are not mutually inclusive.

>So are you now claiming that a local can plug >your ears from a 1/2 mile away,

Again, I must resort to asking....why is it, that some of those licensed for communication, such as yourself, suffer the greatest deficiencies in such? The irony is lost on you..which makes it a growing delight by the day. How did you get a half mile from my "few yards?" Your gray matter is really straining in that overdrive.......hahahahhaahah!

>A half mile away is what it would take for a >legal 4 watt radio to equal the signal from a >100 mW transmitter at a few yards. I should >have realized that you would'nt have >understood that.

Nothing to understand. It has nothing to do with my claim. Once again, it is bullshit entered into the equation by yourself in another failed redirect.

>But you haven't answered the question, does >someone a half mile away, plug your ears on >all channels?

Poor side step,,,you have done better.
You made the incorrect statement that it is only good for one channel and I corrected the statement.

>No you countered the statement, but you were >not correct.

Sure I was. You are applying hammie technicalities (hammie rigs) where they don't apply.

>So you are now claiming that CB receivers are >way worse than ham receivers?

The irony........

>Some of your "big radio" brothers may be a bit >upset with you for making that sacriligious >comment.

Then you better get busy on your deliberate misattributions, you're running way behind.

>But more to the point, I have good quality CB >radios as well as ham radios. They don't >desense when a 100 mW signal is in the back >yard either.

This is like your comparison of the dx cycles, right? Innuendo, personal opinion, and personal inexperiences of yours is all there is..I forgot who I was relating with for a second...for a moment, I had a fleeting glimpse that I was dealing with someone of a certain lucidity instead of one whose knowledge ends with his limited personal inexperiences.

>Stay with argueing the semantics of illegal >operation. Technical >discussions are way beyond your abilities.

Then you have much to learn. You and George must share the same drinking water.

>I am always willing to learn. <

Minds are like books, they only function when open.

>I would be interested in your opinions of >modulation techniques.

AS loud as it can go and still maintain FM quality sound.....oh
yea...and with a tinge of echo.

>The pitfalls of phase modulation versus true >frequency modulation.

One at a time.....take your turn. My turn for a question.
Perhaps you would explain your use of Davemade products on illegal
frequencies during the time you were invloved in a hack shop with the
sex perv while maintaining you were breaking no laws?

>How you equalize your audio to produce a flat >response, and which SSB
filter width provides >the best compromise between signal clarity >and
bandwidth performance. How about DSP >algorithms? You want to talk
technical, I'm >ready.....

Really? Ok.....why do you feel the need to call people names who have
done the exact same that you have done, and treat them with such malice?
(technically speaking. of course)
The fact that a length of time matters so greatly to you (IE: time spent
on radio, age of someone) illustrates perfectly the affliction and
tightassed nature you display so arrogantly of "I did it, and I had my
fun..but....now I know better and YOU can't do what I did". Tim had it
right......born-again hammie.

>So, on one hand, you make the claim that I >could have planted the
>device a few yards away without requiring >trespass, in your yard

,
No, I never made that claim at all.

>Uh, yes you did.<

No, I didn't.

>You made the claim that a single channel >remote control transmitter
would blank the >entire band if placed a few yards away from >the
local's antenna.

Yes, I did...note that it says "few" not "10" like you tried but failed
with..

>I countered that that would have required me >to trespass on his yard.

No, that's NOT what you said. Go back and look at it. YOU claimed, to
me, after *I" claimed it could be done by being placed a few YARDS away,
that 'That would require trespass."
You directed it to me, about me. I responded with "Not in my ow yard, it
wouldn;t".
Now, your little game of claiming something that doesn't take place has
you in the meritless box, Dave. I warned you long ago you should have

quit when you were in the wee stages of frying your rep with lies.

>To which you replied "not in my yard". Now >how does one interpret that? You distinctly >implied that I could get within a few yards of >your antenna without tresspassing on your >yard.
>Oh wait, here you go explaining it again:

I claimed the device would be heard across all 40 within a few yards of an antenna....YOU claimed it would involve trespass...I claimed not in my yard, it would not be trespass.

>You talk about MY contradictions?<

Go back and look at it again,, since you are the only one in doubt what was said originally.

>So which is it then? Do you have a small yard >or will I have to tresspass to get to your >antenna?

Obsessive dwelling on my personal life can only be satiated one way.....the invitation stands.

>Do you mount your antenna, on a pole at your >property line?

I may not have an antenna.

>That would certainly not be conducive to radio >DXing. Oh, I get it. You're being clever. You >operate strictly from a mobile eh?

Nah....my beam is back up.

>Unless you want me to plant a device in your >yard.....

Sure.....you can try, but I must warn you in advance.....Florida has laws that differ a bit from Pa.....it would be a shame to tell that little girl of yours that her daddy was eaten by hog dogs.

>Dog's don't scare me.

Hahaha...come on down and pet my dogs.....
you wouldn't even reach the latch on the gate...I'll even video tape it and post it here after I get you on tape making the statement. "I Dave Hall, being of semi-sound mind and body, hereby release Twistedhed from all damages arising from my attempt to pet sir Twist's pups. I do this of my own free will and was not coerced in any way whatsoever. In my last will and testament, I hereby bequeath my worldly possessions of my hammie certification and..."...well, you get the gist of it.

>I've got one of my own,<

I guarantee you don't have anything like this. These ain't pets, Dave..and if dogs don't scare you, you have never been educated on what they are capable of.

>and it's not a poodle. Besides, I'll use your >suggestion, a slingshot.....

You can't even see my beam from the road,,it's above the treeline. You can see it from the bay..........

>This is becoming too much fun. I give you a >snippet of a post that I >made from my "old" account 7 or 8 years ago, >and you magically claim to have been given >information from some "upperclassman".

No Dave,,,that is singular...I used the plural context of "upperclassmen".

You didn't give me anything, Dave. You certainly never mentioned anything about you being a hack shop.

>No, but once you were given the identity of my >former account, you were easily able to let >your fingers walk through Google.

Dave, I'm not interested in your past..only your lies because you direct so many toward me. Get over your preoccupation with internet strangers merely becasue they show you for the hypocrite you are.

>I know all too well, your obsession with >tarnishing my name.

Check all our conversations, Dave. As a matter of fat, you completely ignored how we were first introduced when I mentioned it..........you came at me first, as always, and when you realized you were impotent and up against someone who wouldn't roll over and kiss your smarmy uppity arrogant, hammie azz, you and Lelnad and N8 went wild.

>Calling you a nut for going off on wild >speculative assumptions, was hardly what I >would consider "going wild".

Oh, so you did check the post.
So share with us your inability to attack the topic instead of the poster and how far back these favorite actions of yours have been employed. That was good, now check a bit further down the line and see how many more are identical...all having one thing in common, your inability to communicate manifesting throughout with insults, off topic matters, name calling, and personal inquirys and hazards.
Nicely done.

It has always
been YOU that attacks the person and not the post.....'cause you lack communciation skills.

>It's funny how you accuse so many people <

Not so many...YOU N3CVJ, Dogie N8WWM, Lelnad KC8LDO, and Frank Gilliland.
Just the louses that Arron admitted to causing trouble..

>of the one thing that you seem to lack above >all else. Otherwise you wouldn't put words in >people's mouths, make assumptions that are >not clearly defined, or obfuscate meanings.

Your words are there for anyone's interpretations. The fact that your views are in the minority and you are not adept at conveying your

message with mere words (communication deficit) does not mean your words will be viewed in only the manner you contend after your gaffes.

It has always been you that has drawn first blood with your personal hangups and concerns with identity...if you weren't having such a crisis, you probably wouln't be such a bad guy,,,,but your family is fractured just like your mind, and it's plain to see why she left.

>Who left?

The mother of your child.

>See what I mean about making wild >accusations? You know absulutely nothing >about my family life, and here you go making >assumptions.

I know you're not married and slightly more than I actually cared to.....

>And if I correct you, by refuting your wild >assumption, you'll accuse me of "lieing".

Only if you choose to do so.

>You really do live in a fantasy world.

No, my world is quite real..the fantasy is all yours...which is why you avoided the question concerning just who it is you think believes you?

>Do you think I would give you something, if I >had something to hide?

You didn't give it to me, Dave.

>If you say so, I know better.<

Show it, Dave. Show where you gave me your admitted freebanding, linear use, and hack shop sales.

>I can picture you searching through google for >each and every post >that I ever made, comparing headers, and >cross checking several times, looking for >something to use against me.

Hahhaha....that ego!!!!!

>Is it? How else would you know the headers of >my posts,

MSN displays them. Pretty simple for someone whoself-professes a certain adeptness concerning internet protocol.

>Your problem is that I don't hide what I do/did, >and what I do/did,

Well, you have claimed I hide, then you have claimed I brag. Do I brag that I hide Dave, or do I hide that I brag.......MMMMPH!

>You hide behind a false name. <

The FCC doesn't see it that way. If they did, they would require licensing again.

>Bragging while remaining somewhat >anonymous is nothing to gloat over.

More of your claims and deliberate false innuendos....

>You make way too much noise for someone >who is supposedly not bothered
>by what other people think. You say one thing, >but your actions speak
in a much different >voice.

But,,if I am ANONYMOUS, why would I care? Gee Dave, that Lelnad logic
never has worked.

>Don't you think I knew what you were going to >bring up?

Sure you did....you are afflicted with the "seer" malady.

>One does not have to be a "seer" to see what >is plainly obvious.

Now it's "plainly obvious" that you
predicted me mentioning your hack shop?
Hhaahhahahhahaah!

I need diagram for the power plug on a Demco Ravelle23 CB radio. It is in Sams Photofact CB series CB-15 book. This radio has a 11 pin power connector and I don't know what pins to apply 115 VAC to. I bought this radio this summer as a winter repair project. I would like to apply power to determine if it is worth repairing. Visually it looks like a very nice radio. Thanks for your help.

Jim

doubt
: the meter on the radio itself would be accurate enough. I'd rather trust
a
: dedicated SWR meter.
:
: Tom

It sure is a big difference especially for a 1/2 meg of bandwidth with a wilson 1000, at 2:1 it would be 100 ohms or 25 ohms at 1.2 you figure it out. quite a difference from channel 1 to 40

I doubt you would be the only one out there with a radio, and I wouldn't
listen to the ones on here
that tell you ham radio is dying. It's NOT! Ten Meters is very much
affected by the sunspot cycle,
and right now, it's in one day, out the next. When it IS running, you can
talk just about anywhere
on 10. But if you get your license, I wouldn't stop there; I'd go for the
whole pie so that when 10 is
dead, I could just drop down below the MUF to, say, 20 or 40 Meters and hit
some true DX. There you will find Europe, Asia, S. America, Australia,
British Isles, Canada- you name it--just as
you might on 10.

Equipment cost is quite relative. I know you see those single-band "export"
radios advertised on
here at times for $400+. Now it's just my opinion, but it is WAY too high
considering that you can
pick up a pretty decent all-mode, all-band HF rig for not much more that
that such as the IC706
which, not only gives you HF, but 6 Meters and VHF/UHF as well! In that
case, the 706 is MUCH more company to you than a 10 Meter, single-band rig
because, for the additional expense, you get 2 MORE radios plus a general
coverage receiver and a scanner, too! You can
pick out state patrols and scan just them, the aircraft band and scan it, or
the entire VHF spectrum,
and with the license, the cops' anti-scanner laws are void: hams are exempt
in all states from that.
You should keep your CB because it is not legal to use a ham rig for both,
tho I am sure it goes on.
That ham ticket will open up an entire frontier to you not previously
available to you. Go get it!

Jerry

Subject: Beware of Tom Sevart N2UHC
View: Complete Thread (11 articles)
Original Format
Newsgroups: rec.radio.scanner
Date: 2001-02-22 15:38:04 PST

To anyone who intends to deal with Tom Sevart, please read this message first!

I purchased a Icom R71A, which Tom advertised right here on RecRadioSwap. He advertised that it was in excellent condition and from a non-smoker.

I sent him the money he asked for, he would not ship COD, so he had my money first, which would be fine if he sent what he advertised.

But when the radio arrived, it did not work, all the screws were loose and odd colors. He obviously had been in the radio and there was an obvious problem with it working.

I called him, he told me, oh, I was afraid that might happen. So he knew it had a problem but NEVER disclosed it to me when I was inquiring about purchasing i t.

He told me he would send me back a check and then I would send him back the radio. Ten minutes later, he called and said his wife spent the money and has no money to send me and hung up the phone on me.

Therefore, I'm stuck with TOm's bomb. It cost me $400. and the bum won't fess up to his responsibility.

So, I am posting here a "BEWARE" and will give his info so NO ONE else will have to be ripped off like I was.

Thomas M. Sevart N2UHC
307 Granby
Frontenac, KS 66763-2440
(316) 231-0228

Do yourself a favor, and never deal with this character. He is a disgrace to the Ham radio hobby. His call is N2UHC and should be remembered as a crook.

I will, however, look into other avenues of getting my money back from this thief.

Here is a copy of his ad:

I have an R71A for sale in excellent condition. Coverage is 100 KHZ -
30
MHZ AM/FM/USB/LSB/CW/RTTY. 32 memory channels. Optional FM board
installed
& remote control included. Owner is a non-smoker. I am asking $400
firm.
The receiver can be seen at http://photos.yahoo.com by clicking on
"Radio
Pics." I want to sell this receiver so I can buy an R75. If
interested,
contact me at n2uhc@yahoo.com.

Tom, you are a total and complete LIAR!!! I never threatened you and that's always a good excuse to use when you're a crook!

Furthermore, your ad states you were selling this excellent radio to purchase another rig. Your excuse to me was that your WIFE spent the money.

Get your stories straight!

Forget the nonsense, WHEN WILL YOU HAVE THE MONEY TO RETURN TO ME?

I'll hold the radio until your money order arrives.

It's very easy when you have my money and I have a broken radio, for you to hang up the phone and call it a DONE DEAL!

It's not done by no means!

So when can you send the money? The radio is in the box waiting to be returned to you when I receive my $400.

Waiting to hear from you.....Rich

904. Re: Hey Jerry O

Newsgroup: rec.radio.cb
Date: 2002-11-08 20:15:38 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <PMUy9.86$oN4.66@news.bellsouth.net>
Source record: 143390

Just remember one thing: I did not start the recent threads about "10 Meters". I just joined in. I've even been getting blamed for starting the threads which I did not. It is true, however, that I am NOT pleased with intrusions of unlicensed ops onto the ham bands. It is also true that I am amongst those who are in the midst of a letter writing campaign to get something done about it. No
matter what any of us thinks, this will get the attention it deserves. Unlike that which goes on on the
40 channels and the freeband that, arguable, no one uses (I know of one licensed agency below 1
that DOES because I am licensed for said frequency), this is different in that those intruders are operating well outside their assigned band and are causing interference and denying use to the in-
cumbent users. This is what differentiates between that which goes on on CB and the 10/12 Meter
issue; the fact that interference is generated to KNOWN users; there is NO argument that hams are
assigned 28.000 to 28.700 MHZ. It is a legal fact. Therefore, it is good news to hams to see a ham/Congressman appointed to the powerful Billy Tauzin's Communications committee. As a result of letters that I KNOW have been flying back and forth to him and others? Seems rather
a strong coincidence if not.

You can attempt to attack me with my own words; it doesn't bother me. I meant what I said then
and I still mean it. You have never seen me involved in a battle of profanity or sexual innuendo be-
cause I refuse to stoop to that level. I say what I think, I sign my OWN name, and stand behind it.
Which is more than MANY group posters can say. And your NAME is???

Depending on the current flow thu the vacuum rectifiers and the final B+ voltage, you could get 20-40volts more.

A standard silicon diode drops about 0.7volts. This drop is relatively constant, unlike a tube, which can vary with the current.

I replaced some 5U4's some audio amps and found the B+ went from 450V to 485V. I had to change the filter caps as well, since they started to short and blow the fuse.

MN102,
The advantage was lower replacement cost, less, heat,
and slightly less current draw for tube filaments. I
don't think anyone uses tube rectifier circuits anymore,
just as there are very few tubes used at all in modern
radios.
'Doc

Not a big fan of what goes on HAM bands either :(

80 meters sounds just like CB maybe worse.....

I was going to get my HAM ticket but after lurking about and hearing all
these old guys talk about
there doctors and prescriptions....Then there's the guys on 80m getting
drunk and swearing and all kinds of BS
Used to stay up all night when I was kid talking to my best friend across
the subdivision on CB
Thinking about getting back into to....This time WELL equipped...Part of the
fun is fiddling with the radios and antennas
and there all sorts of cool mods for CB!

I thought it didn't matter if you're a CBer or not, that you could post here anyway?

And yes, I do have a CB. If you read a post I made some time back, I stated I have a Motorola Mocat 40 that I bought at a hamfest for $1. I may just install it in my shack as soon as I get a mike and a power cable wired up for it.

That's why I prefer my antenna analyzer. Gives you a good picture as to how your antenna performs. He needs to check the SWR on each channel to see what the antenna is doing. If he has a 1.2:1 SWR on channel 1 but drops down to 1:1 on channel 20, then up to 2.2:1 on channel 40, I'd say there's a problem there somewhere because it should have a broader bandwidth than that. However, if it is 1.2:1 on channel 1 and steadily increases to 2.2:1 on channel 40, then he needs to shorten the antenna a bit.

You can probably find a hundred ways to do the same thing, but it's
all based on the same misconception that a couple extra watts is
better than a clean signal. Of course there are some people just like
to watch the little needle bounce around...

As many times as it has been mentioned, hearing my callsign on the freeband, and you believing it is me. Well Tim it sure seems like you have just about killed all of your remaining functioning brain cells with drugs to buy that one. Nothing like a few dumb CBers using my call so often on the freeband that sooner or later they will be the ones investigated by the FCC, and busted. In fact I hope it, and others, gets used so much that Hams will have another legitimate issue to bring to the attention of the FCC's enforcement section, hijacking of legal callsigns by unlicensed users. Once the number and types of abuses committed by CBers gets big enough the FCC will act swiftly. The dumb CBers are digging their own grave.

If you're dumb enough to believe its me then denying it is a waste of my time. The logic of the situation along with my stand against pirate operations is enough to convince most intelligent people its not me without having to even ask the question.

>
> >Why are you so sure I'm playing feebander?
>
> >Why don't you just fess up and admit that you do, or did?
>
> because i dont leland,

Like I've said before, coming from a self professed illegal pirate operator, using Ham HF equipment, and now you want people to really believe you when you say you don't? I don't think so Tim. You wrecked your own image by admitting that you don't respect FCC rules - regulations, so jumping on the Ham bands is no different for you than operating on the freeband. Bands, licenses, rules and regulations don't mean a thing to you. You just operate where ever, and when ever you feel like it, freeband, Ham bands, or any place else that strikes your fancy.

> since i have a hf radio and you have a hf radio and neither of us
are licensed
> for hf services i would say you the ham operator would be more
compelled to go
> talk and hang out with the other hams on the hf band alot more than
i would as
> an uninterested cb'er

The big difference Tim is you have admitted to operating out of band, shooting DX on 11m, while I respect my Ham ticket to much to do something that stupid, i.e. operate out of band and outside of my current license privilege level.

I will bet he will never ever see that scenario with a wilson 1000, or probably most any other antenna. Ever see a SWR Plot? As far as the analyzer what is it going to tell you regarding this situation? Will it tell you how to fix it? will it fix it itself? What exactly will the analzer tell you that you don't already know ?

: yeti@REMOVEcet.com <yeti@removecet.com> wrote:

: The equipment authorizations for those amps have expired, or did you
: forget about that little detail?

Maybe for production of new units. It should not require the removal or
replacement or application of exsisting legal equipment.

: No, I said that the license can't be located by the file number and I
: asked for the callsign. Again, what's the callsign, Skippy?

Sorry if you can't look up a valid FCC file number Frankie... that's your
problem. Tell us the callsigns of the mystical broadcast station(s) you
claim to work for..? You share and I'll share...

:> Hard copies are the bottom line frankie...

: And like I said before, I don't have a hard copy. As far as I know you
: are looking at a sheet of toilet paper.

You only seem to verify things on the web Frankie, if IB is not on a web
page somewhere, your still going to cry. Well, it's not on a web page,
but it's clearly printed on the copy of the valid current license I have
here. Go fish frankie...

: <snip>
:>I actually have a lot more background in the area than you could ever hope
:>to achieve Frankie...
: Alright, you asked for it. Time for the list:

: 1. You specifically said that the 6146 was used as a sweep tube, but
: when faced with the challenge of finding the make and model you
: backtracked and said this:

:>No television I've heard of uses the 6146 tube as a sweep tube. There
:>were some older televisions that used the 6146 tube as a horizontal
:>oscillator and or horizontal oscillator amplifier.

Didn't we go through this once with you frankie..?
You seem to have left out a bit and your good at specific sentence cut and
pasting, leaving out the entire text as it suits your rant. Lets go
through this Frankie. I reposted another persons text which included his
statement about the 6146 tube being used as a sweep tube (possibly in the
Heathkit project TVs), had no reason to sweat the claim. The tube would
function in that capacity. Not a big deal or major technical error that I
would sweat.

So you try to be clever and first paste the "no television I've heard of uses the 6146...." which is a later seperate post followup clarifciation statement from the much earlier post text in your second line "There were some older televisions..." sentence. Out of order, out of context cut and paste that you almost got away with.

The orginal post gets you to dance on the sweep tube labels, not big deal which was easily clarified. For some reason, you just love to go back to the same non issue in any combination of text you can constuct... Get on with something more worth while frankie... your banging your bald head into the same non issue wall.

: which demonstrated your ignorance of the subject. You didn't know
: where the 'sweep' came from in 'sweep tube': I had to explain that
: they were named because they were designed specifically for use as
: horizontal deflection amplifiers, i.e, television 'sweep' amplifiers.

Actually you were just trying to impress us with your desire to post a description. Until your dance and sing, no one was getting excited about it, nor had we asked for one. No one including myself claimed original sweep tubes were originally made for any other application. A near drop in replacement 8950 RF Power Tube was not specifially designed for use in any TV circuit. In the real world most people commonly refer describe the 8950 as a sweep tube because the label fits well, although in your anal book world not exactly true.

: 2. You didn't know what the term "low-mu" described; namely, the
: amplification factor of a triode. Not only that, but you used the term
: to describe the triode operation of a sweep tube while saying that it
: wasn't operating as a triode.

I know exactly what low and high mu describe... it has many potential sub topics when applied to RF amplifiers. Your book text posting wanders so much, I/we must be careful to nail you down to the specific issue. You also touted tetrode specs using Transconductance when in fact they also have mu ratings. Because you left it out, are we supposed to jump up and down to say you don't know anything about it... hardly.

In specific to my post, certain tubes operate as low mu in grounded grid amplifiers, some act as higher mu tubes in similar g-grid operation. These are serious issues when designing grounded grid amplifiers with respect to dangerous amounts of G1 (grid 1) current and the various circuit layouts. You ran out of technical steam and didn't indicate you had more than your one book knowlege of the subject, so I just let it stop there.
Applied Grounded Grid Pentodes and Tetrodes Amplifiers have complex sub topics which can be hashed over in seperate threads. I'm not about to launch you into another of your many off topic diversions. If you stick to one specific theme per rant, well go as far into detail as you would care to go. By your many previous examples, you just want to rehash a 6146 sweep tube post label out of context; over and over and over and over... and over.

: 3. To defend your remark that a triode-connected sweep tube wasn't
: operating as a triode, you tossed out the term "reverse screen
: current", totally ignoring the fact that reverse screen current occurs
: because of secondary emission from the plate, a problem which doesn't
: exist in a sweep tube because of the beam deflection plates AND
: because the screen is grounded for operation as a TRIODE, which cannot
: have ANY screen current, forward OR reverse.

Boy, your really cute with the cut and paste. AT NO TIME DID I EVER SAY
REVERSE SCREEN CURRENT APPLIED TO GROUNDED GRID SWEEP TUBE AMPLIFIERS,
TRIODES OR ANYTHING SIMILAR. Nice try on your part though...

You said it doesn't even exist... I called you on your statement to
review basic tetrode amplifier 101 because it does in some classic
tetrode circuits. Now your trying to big time back pedal here.
Now you've looked it up and defined it above to try and save face. How
novel that you are now an expert in reverse screen current when you
clearly posted in one of your 10/31/02 posts "Now THERES a new one!"

: 4. You didn't know where the 'beam' in 'beam tube' came from, but
: instead thought it was synonymous with 'power tube'. In fact, you
: specifically stated that "the 6146 is a beam power tube, which can in
: the generic sense serve as a 'sweep' tube", which propted me to
: explain that the 'beam' tube is a subcategory of 'power' tubes, and
: the 'sweep' tube is an application-specific power tube, be it a beam
: tube or otherwise.

Not true, but again cute assumption on your part... you threw out your
typical batch of book text on beam tubes... talking about grid spacing
and stopped when the book text ended.
Since you quit at grid spacing, but left out space charge and secondary
emission theory... using your mis-information tatics are to now assume
you don't know anything about those subjects. A more serious directly
related issue with beam power tube missing from your post is any
mention of electrode spacing. Electrode spacing is a serious property of
the beam tubes. Somehow you've totally left that out of your posts... but
again, you probably didn't know about it.

: 5. You didn't understand the meaning of 'grid-current distortion', how
: it's created, or even how to read an EpIp graph to determine the
: relative smoothness of a grid current transistion.

Only your assumption... It's becomes a minor issue in actual tube
selection, if the choice is good enough to serve the desired application.
Opinions on "good enough" do vary, the actual judgement call should made
from measurements made on what come out the coax connector.

: 6. You have shown many times that you didn't even know the difference
: between Class AB1 and AB2 operation, the difference being that AB1
: draws no grid current while AB2 does. In fact, while reading through

Quite wrong of course... you jume back and forth from AB1 and AB2 which
most often have different applied circuits. But you like to avoid my
direct questions. In specific, I'm trying to get you to describe how a

traditional AB2 circuits and AB1 circuit are different in application.

: the previous posts, it seems that you were under the impression that

You could directly ask me... but you don't.

: AB1 meant common-cathode while AB2 meant grounded-grid. For example,
: while discussing neutralization, you state that it is "not required
: in a properly designed AB2 amplifier", which is totally disrepsective
: of the fact that an AB2 amplifier can be common-cathode, and therefore
: require neutralization.

Since you don't appear to have much actual experience building rf
amplifiers, let me give you the word...

We are talking Grounded Grid amplifiers which are for the most part,
always AB2 circuits in design and operation. You hint that AB1 operation
is possible, whereas it might be with reduced drive levels... but I know
of no purpose designed conventional grounded grid amplifier running AB1.
Maybe you could give us an example of any purpose AB1 grounded grid
amplifier you know about...? Any..? Traditional AB1 amplifiers are
for the most part common cathode circuit layouts. The original topic is
Sweep Tube amplifiers in grounded grid operation, that is AB2.

: 7. You have the mistaken belief that the 'flyweel effect' of a tank
: circuit is a cure-all for non-linearity in a linear amplifier, when in

There is no cure all for non linearity. An input tank circuit should be
considered a must have in all grounded grid amplifiers. Your happy grid
linearity babble on is not the same linearity issue I address with the
input tank circuit.

: fact it CANNOT reduce or eliminate grid-current distortion. I needed
: to explain that in order to be linear you need at least 180 degrees of
: undistorted conduction time, which you cannot achieve with grid
: current distortion.

Well mr magic amp... what is the conduction angle of an AB2 amplifier..?
Yep, greater than 180 degrees. The big picture here is the grid current
distortion in the topic amplifier is not large enough to prohibit the
Sweep Tube from consideration as a viable choice. Sweep tubes in AB2
grounded grid amplifiers have conduction angles greater than 180 degrees.

: 8. You didn't know that 'grounded' in 'grounded-grid' means a signal
: ground, and not necessarily a DC ground.

Seems to me, I brought that to your attention frankie... you're
again trying to turn a post around again. In specific, I stated there is
more than one way to ground the required elements providing you understand
basic AC and DC load lines. It was clear to me that you don't have
the proper background knowledge when you coughed and wheezed a batch of
poop about my recomendation to include 10 ohm cathode lead resistors in
my Dentron GLA-1000 update text.
First off, you started out with a "grounding the cathode" rant, when I

corrected your goof, you moved on or avoided your orignal mistake to say the resistor addition was stupid.
Well, had you pulled your head out and done the proper homework, you've find the example amplifier linearity improves with the mentioned modification. But since you know feedback, degeneration and load lines so well, you can figure that out later.

: 9. You didn't know what ALC circuits are, calling them "linearity
: detectors" (your own terminology),

Come on now frankie... talk about text twist and dance moves... I referenced an example linearity detector shown in the Galaxy Sweep Tube HF amplifier text posted on the sonic server. I also mentioned its use in Collins amplifiers, though I don't believe that was in one of your threads. ALC circuits can be made using various type of sample circuits. Some alc circuits are not unlike the common linearity circuits found in the Galaxy Text. Regardless of the type, most ALC circuit operation is to little, too late.

: and saying that ALC circuits are
: "bad news" because of their "time constants". Of course I set the

More of the older ALC circuits... some modern tranceivers approach practial responce time constants worth consideration.

: record straight that ALC circuits are basically RF compressors which
: require attack and decay time constants, and are so used in the radios

Which are slow to react... once the distortion is on the air... its to late to do anything about it. ALC detector circuits come in all sizes, shapes and circuit layouts. You are again not specific... The function of a properly connected ALC circuit would be to act as a limiting control. RF compression is not such a good label frankie...

Many Amateurs using ALC are clueless about the actual circuit operation. Before the ALC acts (time constant)... unwanted poop is piped out the coax connector to the antenna.

Depending on the ALC to throttle your tubes back results in much higher levels of initial pre alc action poop. You can hear that poop as buckshot up and down the band...

: you claimed had "linearity detectors". You also claimed that ALC
: circuits are "dated technology" despite their continued and effective
: use in amplifiers and other circuits.

At one time, ALC was thought to work pretty well for the most part. Relying on it for rf compression is poorly applied technology. If you were to look at your signal before the ALC acts... much unwanted poop is generated. Especially in SSB operation with voice compression.

: 10. You continue to claim that sweep tube amps meet or exceed FCC
: specifications, yet you never state those specifications or the
: conditions under which the amplifiers passed, you never post any noise

: figures, and you never make any comparisons to amps that use RF power
: tubes.

Dont have to do it twice. Consult the LA-1000 or GLA-1000 owners manual for details. They are FCC legal amplifiers which is all that matters. The FCC said go and the various mfgrs legally built them. The mid 80's ARRL Handbooks show great examples of sweep tubes in rf amplications. I mentioned the Handbook references more than once, it's a waste of time to post redundant information.

: 11. You clearly do not understand the cause of parasitic oscillations,
: stating that it is due to the nature of a tube, and that the 6146 and
: 4CX250 were 'seriously' prone to VHF parasitics. I needed to explain
: to you that they are caused by resonant conditions within the circuit,
: not the tube itself. I also explained why sweep tubes are NOT immune
: from parasitics because of their poor VHF response as you claimed.

Not true... has a lot to do with the actual tube geometry and the actual circuit. Specific tubes require extra special care in amplifier circuits based on their internal geometry and VHF gain. Some tubes with high VHF gain don't have serious parasitic concerns, hence their placement into hf operation are not as circuit critical. The 8877 is one such animal.

The actual internal constuction of the tube matters very much. You are clearly wrong...

: 12. You didn't realize that if a receiver can hear the background
: noise on a frequency that a pre-amplifier does not improve the
: signal-to-noise ratio at all, and will actually ADD to the noise with
: it's own circuitry.

Actually, my response was about your broad statement that using a fet preamplifier is useless. I don't agree... not everyone has a hot receiver. A switchable low noise fet preamplifier is a very good thing and relatively cheap in cost. Not everyone has your magical hot as a firecracker receiver... in fact some of the Icom 706MKIIG radios I've tried have pretty numb receivers.

: 13. As stated before, you didn't understand why a grounded-grid

You are so bad at making things up out of context Frank.

: amplifier does not require neutralization, citing the reason as 'grid
: screening'. I had to explain that it's not required because the
: amplifier is non-inverting (which you also didn't understand), where

Not the entire case, only part of the master plan frankie... there's a list of grounded grid benefits.

: the voltages on the input and output are in phase, and therefore cause
: no regenerative feedback that would require neutralization (which is
: where the term originates -- the 'neutralization' of regenerative
: feedback!).

You are a piece of work frankie... the vhf circuit which can sometimes support VHF ocillations is mainly determined by the Anode-C and the inductance of the conductors between the Anode and Tune-C. Your in phase statement is bogus at VHF where the parasitics often occur. Your post information is faulty.

: 14. You are under the mistaken impression that grid-to-plate
: capacitance changes depending on whether the amplifier is
: grounded-grid or common-cathode. Of course it doesn't, because it's a
: characteristic of the tube, not of the circuit. I explained that you
: might be confused because the -input- capacitance is different, and
: that's because the two different circuits use different parts of the
: tube for input.

It's no mistake Frankie... look it up. Use the exact text I wrote so you don't twist in some misinformation your so good at doing. If you need some help, I can reference some text for you.

: 15. You stated that "exciter feed through power of the example AB2
: grounded grid amplifier is a big time 'freebie' you don't see in AB1
: circuits", which only reinforces my theory that you really don't
: understand amplifier classes of operation. Grounded-grid amps require
: drive power because the input is the cathode, which must conduct if
: the tube is to work at all. Input power of a grounded-grid amplifier
: is always carried to the plate regardless of class of amplification,
: and regardless of grid-current.

Once again Frankie... how many grounded grid AB1 amplifiers have you seen in use..? Don't modify my text as you go along in your rants to suit your current post needs. The predominant class of grounded grid amplifiers is AB2... exciter power is required and a portion shows up in the output as a freebie. Doesn't get any simpler, but you seen to want to give theory examples of amplifiers no one person is using. Earth to Frank, real world here... wake up..

One last thing... your last statement is not so true... class AB1 operation of grounded grid amplifiers does not consume input power.

Got to go, back later to finish... love ya frankie, keep trying.
skipp

: 16. You claimed that grid-current distortion only occurs in a
: grid-driven circuit. Of course that's not true, as grid-current
: distortion occurs whenever grid current occurs, regardless of whether
: it's grounded-grid or common-cathode.

: 17. You claimed that putting a resistor in series with the cathode of
: a grounded-grid amplifier will improve linearity, when in fact it does
: nothing but reduce the output power and dissipate part of the input
: power. I also pointed out how cathode resistors are commonly used to
: improve the linearity of a common-cathode amplifier, but not for RF
: amplifiers because it would unground the cathode. Such practice is an
: audio technique that you mistakenly applied to an RF application, and
: also to the wrong type of amplifier.

: 18. You stated that voltage equalization networks are "dated
: technology", claiming that almost no amplifiers use them anymore. This
: is not only a slap in the face of good engineering practices, but also
: flows against basic semiconductor theory: Exceed the PIV and the
: rectifier may fail. Regardless, most amplifier manufacturers do not
: use series connected rectifiers, opting instead for a single rectifier
: of the proper voltage rating (which of course doesn't need a voltage
: equalization network because one rectifier is not multiple rectifiers
: in series).

: 19. You were totally unaware that the mic gain is the power control
: for an SSB radio, showing a gross misunderstanding of the principles
: of SSB modulation.

: 20. You claimed that the interelectrode capacitances of a sweep tube
: are "easily dealt with", yet on the Dentron you failed to recognize an
: input capacitor used to compensate for the input capacitance of the
: tube, calling it one leg of a pi tank. In fact, you don't know the
: difference between a pi-tank and an L-pad, frequently using the term
: "pi-L" to denote something as yet unidentified.

: 21. You mentioned one of the drawbacks of running AB1 was dumping
: power into the swamping resistor, which means that you have no idea
: that a swamping resistor is used to reduce grid-current distortion. Of
: course you can't have grid-current distortion in AB1. And you also
: didn't realize that a low-impedance tuned input is far superior to a
: swamping resistor (when running AB2) because of the negligible power
: loss, and because it performs better at maintaining linearity of the
: signal under grid current transistions.

: 22. You haven't explained why grid-current distortion is "not an
: issue" with "most properly designed AB2 grounded grid amplifiers". In
: fact, you haven't even explained once what makes a "properly designed"
: amp. On the contrary, I have explained many times why AB2 IS a problem
: when the amplifier uses sweep tubes.

: 23. Whenever you don't know something you make up vague and
: nonsensical terms like "classic", "linearity detector", "passive gain
: operation", "traditional potentials", "beam power application", or the
: use of the term "low-mu" to designate a triode-connected sweep tube
: that doesn't work like a triode (and you still haven't explained how
: it works if not like a triode).

: Who's the one lacking in RF theory and experience, Skippy? It ain't
: me, that's for DAMN sure!

How do I know if my A 99 antenna is working correctly. Before I use to here a lot of static now I have to turn the volume up all the way to hear anything and lot of stuff use to come in now hardly anything comes in. When I try to use a swr to tune the antenna nothing happen. I use to have a indoor antenna that seem to work better than this one, may the A 99 is working and I just to not know it yet. The only chanel that seems to work is channel 6. Would could be wrong I followed the instructions and I am using rg58 coax. I have a cobra 89xlr that I use whith this A 99 antenna.

Since you have had some success with the indoor antenna, then perhaps when
you installed the cable, you may have broken it in the process.
RG58 is quite prone to accidents.
Or it may have been bad to begin with. Even a bad solder joint has been
known to screw things up.
Try another radio and see what happens.

FYI, an swr meter does not tune the radio.
It merely shows you the relationship between radio and antenna.

I was down there three weeks ago to co-conduct a CLE seminar on amateur radio regulatory issues, particularly tower zoming and permit issues and what the FCC is doing to/for amateur radio, at the ARRL Pacific Division Convention (Pacificon).

I co-conduct that dog-and-pony show twice a year - in Concord, CA at Pacificon in October, and in Seaside, OR at SeaPac, the ARRL Northwestern Division Convention in June. An easy 4 units of CLE for those attorneys who attend it.

(That brings this discussion back to amateur radio policy.....)

And it still is an AM radio, the carrier is reduced, it isn't
suppressed, you can't get dsb just by reducing the carrier. You
have to use a balance modulator to generate the dsb signal.

Matt,
It could be a number of things. If the radio is
'used', it may be that either the SWR meter doesn't
work, or, that the transmitter isn't transmitting.
Same for a new radio, but not as likely. It's also
possible that both antennas have something wrong
with them. Also not too likely, but possible. I
would 'beg or borrow' an SWR/watt meter to see if the
radio is working.
The 'RF' gain control should be all the way 'up'
in any case, then control 'loudness' with the 'volume'
control...
'Doc

Hi there! I have a Cobra 29 Ltd Classic "SE" black face and all. This one has the expander 100 in it(just for your listening pleasure of course) talkback and a supertalk kit. About a 6/10 for looks but an 11/10 for RX/TX

Next I have a a Galaxy DX73V peaked and tweaked. Fun radio with the robot voices and all.

I also have 2 D-104's (chicken chokers), Palamar 225, power supplies(3amp&5amp) Turner +3B, Turner Expander 500, Astatic 575M6 handheld.

If you are interested in any of these, email me at ron_siple@yahoo.com and shoot me an offer as I dont look in here much anymore.

Thanxs
Ron Siple

970. Re: How do I know if my A 99 antenna is working correctly

Newsgroup: rec.radio.cb

From: 'Doc <w5lz@cwis.net>
Message-ID: <3DCCD08D.5F41CB2A@cwis.net>
Source record: 143556

DJ,
If you aren't hearing anything (or much of anything)
on the 'A99', I think it would be safe to say that theres
something wrong. It may be the antenna, feed line, or the
radio. Substitute another antenna to see what happens.
If you hear things better, then I'd say something was wrong
with the 'A99', especially if the radio was working before
using the 'A99'. If you have an ohms meter, you might try
checking the continuity of the feed line, it's possible to
be too 'rough' with RG-58 and have a break in it. If the
only change you have made is the antenna, I'd tend to suspect
that's where the problem is...
'Doc

Damifino, I was responding to the claim above, that the 259 "does nothing
that a good swr meter can't do, it just cost you a little more.", which is
obviously not correct.

>He isn't
> designing antennas,he doesn't need to know the resistive and reactive
> impedance he is tuning a wilson 1000 that should be almost dead nuts on.
If
> he knew the res and react impdedance what will that make you do pull the
> whip out or lower it, same thing that will be done with a swr meter.

If all you care is lowest SWR, then all you need is an swr bridge.
If you care that the antenna is really resonant AND matched impedance, you
need to see that the reactance is near zero while the impedance is near 50
ohms. A dummy load gives a 1-1 match too, but it dosen't radiate very well.

Arcane bureaucratic psycho-babble "rules," neither understood
nor much less obeyed by anyone. Such bureaucratic
psycho-babble serves the sole purpose of justifying the
position of the bureaucrat who composes said "rules." Similar
bureaucratic nonsense accounts for tens of thousands of
overpaid federal "positions" held by bureaucrats who compose
and crank out arcane useless rules by the bushel every year, while
we the taxpayer foot the bill by paying federal taxes to support
such bureaucratic nonsense. Get a clue! The mood is shifting in
the country, as evidenced by last Tuesday's elections. Joe Six
Pack is sick and tired, fed up, pissed off, and pissed on, working
12 hours a day to pay lavish salaries and benefits to federal
bureaucrats whose sole purpose in life is to compose "rules" which
make Joe's life more miserable and more difficult to support his
growing family. I've seen all kinds of shit and abuse heaped on
truck drivers by the Sanhedrin in this NG. Got news for you
"talking heads," as another poster calls you fools, truck drivers ARE
America, and paper-pushing rule-writing federal bureaucrats are
SHIT. That's right, SHIT, not fit to breath the smoke blown out
of the exhaust pipes of an 18-wheeler. Here's my message for
you, FUCK YOU and FUCK the horse you rode in on!!!!!!!!
Get a clue & Get a life.

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Sold as-is.

$40 for all
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

Truckers.
Other delivery drivers.
Taxi drivers.
"Field" workers, who drive between bookings.
"Home workers", who can listen to what they like while working.

Then there are those who may use CB for their work, Truck stops,
CB shops, some taxis use CBs for contact between cars and base, etc.

Also, we must not forget that there are many people who work
nights... plus Milkmen and Postmen who work early mornings, so
can have the rest of the day free.

Yes, he was making assumptions, without stopping to think about it.

Regards,

Peter

But you did LIE about your name Tim. The sound alike excuse just doesn't wash. You just didn't expect to get found out so quick and spanked for it. As a matter of fact your complete home address and where you work has been posted on this news group more than once, and people tend to archive that sort of thing for occasions like the one asking you your REAL name. That way when you lie it comes back to bite you.

Yaesu Vertex 150 2-Meter Ham Radio. This radio is like brand new. Comes with battery, belt clip, antenna, charger, owner's manual, and original box. This radio will receive all VHF police frequencies. Has 199 memory chanels, automatic repeater shifts, manual repeater shifts activation, all keyboard programmable, VFO split mode, receive battery saver setup, TX battery saver, keypad LCD alumination, digital readout, automatic power off feature, CTCSS operation, and many more features.The radio is also MARS/CAP modified for 134-174 MHz receive and transmit.

Make reasonable offer or might trade for something of interest.My interest are 10 meter,scanners,high end RX'ers,guns,and try me ??

Rod,
You're right, I find that very hard to believe. I
guess it just depends on what you call a 'good' SWR.
No matter what your meters may be telling you, I can
not believe that you have anywhere close to a
'50r +/- 0j' input impedance over an 11 Mhz frequency
range. If you did, you might consider selling tickets
to see that 'A99'...
'Doc

I should have said, "...if you WERE interested in the Swan..." -- it's
already sold.

And since you brought up the subject of hiding, why is it that I can
post my real name in a newsgroup that you call my "hideout", yet you
can't post YOUR name in ANY newsgroup? You aren't hiding, are you?

Come to think of it, what makes you crawl out from under your rock
just after Skippy gets exposed for being a hack? Mere coincidence? If
you have plans to pick the remains of Skippy's shattered ego out of
the mud then by all means give it your best try. Otherwise, go back to
freebanding while waving the American flag, you pseudo-patriotic twit.

No, I just think it's strange that someone who doesn't use a CB is so
obsessed with illegal CB operators. Must be OCD or something.

So will a swr meter, but what will the "analyzer" tell you that swr meter won't or even a grid dip meter ? Remember we are checking swr of a mobile antenna here not making stubs, checking coax etc. Ok lets say it tells you that your antenna is 35 ohms, what problem is that, what do you do now? You guys put to much into a Antenna analyzer, they are nice and convient, for certain aspects of antenna work. How did hams ever do it before these analyzers came out?

: But then what do I know, I'm a liar, remember?

True

Yes talk about hypocrites, you are the head hypocrite so I can't call a troll for what he is a troll. You are so hung up on your assumptions of me by passing NG filters, lol if that was really my goal you would still read my posts you have already shown that when I was supposed to be kill filed. Why is it all of a sudden no one is making me read his posts when It is me posting you cry to ISP's and tell us all kinds of excuses of why you still read my posts. Now listen to this this is the funniest part yet

"You don't want to read my posts right?, you claim I should use one screen name, what the hell good would that do , because no matter what screen name I use, or have used it has been proven that you always reply to me or my posts so really what difference what name it is under. You have the choice to not read or reply to me you chose to always reply to me.

Ill give you an example, i don't use kill files, it is called self restraint see I don't reply to those I don't want to such as people like dave and debby and Brainbuster theyere posts show up lk everuone elses. I chose not to read them and If I accidently did I don't respond to them. Perhaps you should try it sometime. Your still pissed of we found you out for who you really are If your worried about the skeletons in your closet be more careful next time where and when you post it usualy comes back to bite you. .

Say the wrong thing and you get your ham call used on "freeband"? Hm. Well, I suppose that's one way of enforcing respect for bootleggers in this NG, Tim. But the few times I have listened there it was all noise; singing, playing music, arguing, sound effects, etc. so I doubt the false callsigns would even be heard.

I propose a band swap. I think that would cure everything.

Give the CBr's full control over 10 meters. Let the Amateur Radio have control over 1 - 40 channels. Seems logical doesn't it? Hams like to talk using the Sun spot activity. And channels 1 through 40 would be perfect for them. Don't you think?

I would like it very much to be able to talk to someone across town for once. But with all the spot activity during the day, I can't. I am lucky to talk two miles if that. I would like to be able to talk 15 miles at least without any problems. Having the options using FM, squelch out the noise. That would be nice...

10 meters is almost identical to 11 meters, as far as propogation. No it
doesn't seem logical at all

And channels 1 through 40
: would be perfect for them. Don't you think?

No I don't, why limit them in your *trade* to channels 1 thru 40 what about
the freeband Cbers certainly use it now.

: I would like it very much to be able to talk to someone across town
: for once.

Get a ham license you can talk on repeaters etc to many locals.

But with all the spot activity during the day, I can't. I
: am lucky to talk two miles if that.

the use of amplifiers on cb also increase the hetrodyne and associated
noise levels 10 fold

I would like to be able to talk
: 15 miles at least without any problems. Having the options using FM,

They are cheap and easy to make all you need is some 10-16 guage wire bout
20 foot will be plenty and some coax, you could also use a device called a
balun but it isnt necassary.

Cris,
There's no practical difference between 10 and 11 meters
as far as propagation is concerned, so there's no benifit
to swapping. If you talk all the rest of the hams in to
swapping, I will too.
'Doc

I don't use a cb but as a ham I am very concerned with illegal cb
operator who operate illegally in the 10 meter band. Anything
wrong with that?

And just how long do you think it would take the cbers to make a sewer pit of communications of 10 meters like they have the 40 channels on 11 meters? Not long. It would not be long before you couldn't talk across town even with all the frequency spread 10 meters provides.

Cris,

You have a number of options. 10 meters is virtually identical to 11 meters. You could try MURS. That is two watts output at 156 or so MHz. You should be able to get 10 or more miles between a base and a mobile and 20 miles or so to another base. You'd be using FM so it would be (except on the extreme fringe) noise free. It also requires no license.

If you don't mind signing a legal callsign (my suspicion is this is the real reason many folks don't want the amateur license - the tests are too easy, Morse isn't required, and amateurs, like any other group, are from all walks of life - they are not all the same), you could probably be ready to pass the no code tech starting from ground zero in a week. That will give you access to repeaters, autopatches, and much more (yes, high-speed television repeaters too). Range from a handheld should be a MINIMUM of 10 miles, likely far more depending upon the whip. Range from the repeater should be another 40 miles or more in any direction. Of course, there is FRS, but, as you know, range is very limited. BTW, with the codeless tech and a 10 meter port on a local repeater system, you can talk worldwide from a handheld.

To sum it up:
1) if you don't want to identify, use MURS
2) if you don't mind identifying, try getting your ticket.

Hello George:

Your getting "tilting" a few degree's and 45 degree's mixed up. A few degree's to even 30 degree's will make a small difference in some cases, depending on ground reflections and a few other things.

I have a test platform that actually rotates the antenna in the elevation plan or angle. It uses a Rotor mounted sideways, with a counter weight. You would be amazed to what elevation angle patterns I see.

Jay in the Mojave

A dipole isn't much more than some wire, and maybe a $15 balun.
They do pretty well, as long as your attic and roof don't have much metal.

The original intent was to tilt the antennas slightly forward, so that at speed, they were vertical. This does have its merits. Nowadays though, it seems to be done by some whom have no clue.

A good price is about 50 cents worth of wire- You can make it yourself! Divide your center operating frequency into 468 and that is the total lentgh. Cut a piece of wire to the calculated lentgh. #12, 14 or 16 wire should be fine. Then cut that wire exactly in half. Solder one half of the wire to the sheild of your coaxial cable, and the other half to the center conductor. Hang the dipole between two trees (It should look like a big T when you are done) and check your SWR. Its the simplest antenna you can make, and almost everyones first home-made antenna. Do a google search and i am sure you can find some pictures. Good luck!

Aaron, you don't exist. Your name is a pseudonym for someone that does exist. Until the time that you choose to use your real name, don't expect to be taken seriously. Don't start the same old song and dance about anonymity that you've used in the past. It wont hold water.

Got it, Dwight?

That's what I'd say, especially if the antenna appears to be intact. I'd try testing the continuity between each end, and checking to make sure there's not a short.

I think that it is correct for Canada, though. If I remember correctly, you
do need a ham license up there to own an amateur transceiver.

> companies, webpages, etc. that I could find a base antenna to buy?

Building one for your attic might be kind of hard unless you have an attic with 9 foot clearance. You could mount it horizontally but you'll lose a few dB since most CBer's use vertical antennas.

Here's an idea for a cut-down version of the 11 meter dipole I posted not too long ago. You could try using two loaded mobile whips configured in a dipole configuration. This still may require a bit of ceiling clearance unless mounted horizontally. It won't work quite as well as a full length half-wave dipole, but would work halfway decently. The horizontal half-wave dipole would probably work better.

You
> guys put to much into a Antenna analyzer, they are nice and convient, for
> certain aspects of antenna work. How did hams ever do it before these
> analyzers came out?

The antenna analyzer allows you to test an antenna without having to have the transmitter putting out a signal. You simply hook it up to the antenna and get a reading. No messing with reading forward power, then flipping a switch and reading reflected power. With the analyzer you just turn a knob and read the SWR. It's much easier, plus allows you to read how an antenna performs on frequencies you're not authorized to transmit on. This is handy for reading the resonance of a SWL antenna outside the ham bands and for scanner antennas.

If you don't like antenna analyzers, don't use them. I, however, find it a useful tool.

Don't pay too much because it's easy & cheap to build one. All you need is
around 17 feet of wire and maybe a connector for the middle.

:
: Tom

I know how to use them , I know how they are used, I own one, as well as a good watt swr meter. this thread was regarding a wilson 1000, and a I believe it may have been you that brought into play the antenna analyzer which in my opinion would tell you nothing about that antenna that a good swr meter would. They have there use and are useful but for his application it is unnecessary and over kill.

True Randy and they used to use fingers and toes, calculators, and pens and pads to do math. But the funny part is doing it the old fashion way still works and is usually cheaper. To each his own I guess and depends on the application.

> > UKers are permitted FM only in that band. DXing on it is illegal.

DXing is LEGAL in the UK.
I already gave the reference to the "RA" website once, where they make it
clear that there is ABSOLUTELY NO DISTANCE LIMIT for CB
communications in the UK.

If you need it again, get it from the radio links page on my site... and
look through their site.

> >Can you tell us what usage that portion of the band is intended for in
> >the UK? (Hint: it's not DXing)

Just talking... any distance.
There is NO UK law against CB DX... it is clearly allowed, and has been
from the beginning (1981).

If you mean frequencies:
27.60125 to 27.99125MHz
and
26.965 to 27.405MHz

Mode: FM only.
It would seem that the possibility of SSB and packet is being looked into.

> > So do us a favor, post a link that describes that country's
> > unlicensed 11 meter DX freeband privileges.

As I said, I already posted a link once... visit the links on my site.
You may find the mistake that "Richard Cranium" has made about the
UK service. But you will have to look for yourself.

Brainbuster.

> and the others neet the transmitter chip replaceing...

audio imput chip?
Do you mean "audio Output", "amplifier" or "audio power" IC?
You may find that some are now "obsolite", so have either
been overpriced or cannot be found.

transmitter chip?
What do you consider to be the "transmitter chip"?
There are plenty of semiconductors in the transmit
section of a CB radio.

> i used to fix hundreds of cb radios back 15 to 20 years ago.

Then I would expect clearer references to components.

> and am starting to buy broken cb radios and other cb gear fix it all and
> then sell it on ebay.....

The words "Buyer beware" come to mind.

> > if you can help me with a website or shop were i can get the parts i
need

You have "fixed" hundreds of CBs, and do not know of Knights CB
shop, or Truck Kings? They are both on the "Net", links can be
found on my site... http://clik.to/brainbuster/

There are also electronic component shops, where CB components
may be stocked. It depends upon where in the UK you are.

> please get back to me by emailing me at shogun1965@lycos.co.uk

It is usual to reply to a news message in the newsgroup, so that many
may benefit from the information.

> or if you need a cb radio power meter mike antenna switch filters
> ect email me as i have lots of bits and bobe

And we all know how important a good "bobe" is.
Never leave home without one.

Regards,

Peter.

> to watch the little needle bounce around...

Controlled carrier modulation does have some advantages. duty cycle, and
reduced current consumption are just 2.

Asymetrical modulation has also resulted in a greater degree of "punch".
But to do it right, requires complex circuits that allow the modulation
peak to exceed 100%, while not allowing the negative trough to cut off
below zero.

The CB implementation of the "swing" mod is not clean. It is not
asymetrical modulation, for while the peak rises to as high as 200%, the
negative trough will cutoff as the still symetrical modulation waveform
tries to go to 200% negative (but it can't). The result of this is a
distorted waveform, and of course, splatter.

One way around this is to "ride" the carrier level along with the
modulation peak. The carrier level changes with modulation, so that
there is always enough carrier to allow the modulation trough to just
hit zero, while the peak rises up. This is more of a controlled carrier
setup. It's a bit cleaner, but it's more complicated, and many people

feel that it doesn't have as much punch (although it still makes the meter jump around).

Why should that piss of the hams? Advertising such an amp, aside from
being illegal, is an opportunity for the hams to get it out of the
hands of a keyclown. You are actually doing them a favor!

If you are planning a horizontal dipole, consider that most CB
antennas are vertical; i.e, your performance isn't going to be as well
as you might expect because of your polarization. A mobile vertical
mounted to a rain gutter will probably work better.

Hello, Lelnad. Haven't seen your temper flare like this since you were squashed on the freeband and recorded when you were trying to jam the freq with your paltry deadkey.....Since the van isn't for sale, does that mean the vanity plate in the pic will remain your call sign of KC8LDO for a while longer or did you already pull it off? Oh yea, almost forgot why I was replying to you.. I ask you to consider the amount of time one is required to sign up for when opening new accounts with an ISP OR access sites to usenet (you may confirm this with each of the following) and also consider their free trial periods such as "Bignet" (pulled when you lost your temper and actually had the temerity and stupidity to tell me I was "dead",) "Mediaone" (pulled for spamming and flooding) and "supernews" pulled for forging...this doesn't even count your newsranger and cotse posts.
It's not like I expect anyone that cares to believe you or me anyway, Lelnad,,,I urge all who give a damn to check for themselves..... the posts and threads in google that coincide with each subsequent complaint, and the incredible odds arrived at by the exact same coincidental timing of your "new" access abilities taking place after each usenet violation..well, the odds of such a thing happening are equal to hitting the lottery or getting struck in the head by lightning,,which, judging by some of your more colorful posts, may indeed have occurred to you. Now listen up for me in dx land and try not to pop!!

Beginner w/ antenna ground question

I (after a year of collecting dust) reinstalled my CB in my jeep. I thought I knew what I was doing, or have never had trouble in the past. I am installing the antenna on a well-insulated tire carrier. So I ran a ground strap. But no reception. I live 200 yards form the intrastate, I should get something. So what I think I am doing wrong, but cant find conformation on the net, I think I have it grounded wrong.

Where do I need to put the insulator (plastic washer), between the coax and the mount or between the antenna and the mount? Or should I toss the insulator.

I want to check the antenna ground before I assume my CB is shot, ten year old Cobra 25 if that matters.

No, he means it's ok for him to
Spam the group with advertisements for
merchandise that is inflammatory towards
numerous people here, but it's not ok
for us to put up links that are of
humorous in nature, kind of hypocritical
isn't it.

You want to use that insulator. What is the antenna mount, a ball mount type, with the 3 holes? Make sure the ball mount and threaded ferule are insulated from the grounding service. Does it have an SO-239, or screw terminals?

no, just a 90 degree "L" bracket but it is mounted to a surface finished in roll-on truck bed liner.

So my ground (2 points) I grounded one of the bolts fixing the bracket to the tire, and a connector in-between the coax and the bracket, then the insulator between the mount and the antenna.

That is really what I need, where dose the insulator go?

I don't think that it would be unnecessary. It's an either-or
situation where you can use the SWR meter or the analyzer. Either one
would work fine.

Yes, but probably best to get it away from the house. Another way you could try it would be to mount it as a sloper, with one end attached at the roof of the house and the other end attached to a pole or tree. Make sure the antenna is at 45 degrees. If you try this, though, you will have some directivity toward the end that is near the ground.

The bed liner may be preventing a good ground. Hard to say without seeing the mount. The insulator must keep the vertical "radiator" from ground potential. It goes inside when putting the mount together. Take an ohm meter and see if you have continuity from the mount to the body. You should not have continuity between the antenna itself and the body!

Don't ground the antenna itself(radiator). Evan......its hard to tell you without seeing which mount you actually have. The mount itself should be grounded. The plastic sleeve prevents the antenna portion from coming in contact with the ground.

> He doesn't need a balun, he can make a choke for free. These new fangled
> hams.

This new fangled ham sees a problem connecting a balanced antenna to an unbalanced feedline, without a balun. Just because people do it, dosen't make it right. A choke is a poor substitute.

Delaware got out clean again, but we lost a wall of a marsh store in Blackford co to a downburst.
The wind blew in the back loading door. The back wall made a pretty good funnel with the loading door at the base, and when the door blew in, the building did a pretty good impression of a blowfish, causing the roof to lift, and the N wall to fold outward.

>hang down, so then it would be verticle?

If your rain gutters are more than 18 feet off the ground and you
don't have aluminum siding, I don't see why not. But I mentioned the
rain gutter because it can work as a ground plane for a mobile
antenna. Come to think of it, the gutter-mounted mobile antenna would
be higher than a dipole hung from the same point, giving it an
advantage there, too. And with a vertical dipole, you need to run the
feedlines out perpendicular to your antenna -- not always an easy
task.

If you want an antenna you can hide, just mount the tallest vertical
you can fit in your attic, and run lots of wires for the ground plane.
If you want an inexpensive outdoor antenna you can build yourself,
check out the plan for the one I built. It cost me less than $20:

> I was lucky,just a few branches down..sigh.

About the spookiest thing I've seen while spotitng, is pieces of leaves,
floating down out of a blue sky. Towers were all around us, but overhead
was clear, and there were these pieces, up to quarter sized or so, some with
twigs still attached, floating down from as high as the eye could see.
Obviously somewhere nearby there were some trees getting hoovered, but
nothing that any of the spotters could see.

Source record: 143734

Thank you for additional confirmation of what I already knew about Ham Radio.

>My favorite place in the whole-wide-world is the Freeband!
Since you are a "Ham", this shows Hams are not much different from Freebanders or CBers. The focus of Ham Radio is to contest.

>Ham radio is not for everyone simply because they cannot learn the
>Morse Code.
Exactly, Ham Radio tends to emphasize Morse code. The have codeless tech so they wont repel everyone. But to get a higher class licence, one must learn Morse code. So you are only a "Technician" class if you did not learn code. Then you are above a Technician if you did? Give me a break.

>. In this day & age, it is obvious that there is no need for
>CW.
Some people get some kind of thrill from it and feel they have to pressure it on others by making it a requirement to the higher level class. All it ends up doing is repelling the technically inclined and rewarding those that learned Morse.

>Old timers swear that it must be kept as a requirement because
>"the Ham bands will go the way of CB".
I have heard this phrase also. If this is the only thing that separates Hams from CB, then Ham Radio is truly pathetic. Besides, couldn't anyone that wanted to learn Morse do so- even a CBer. One can transmit Morse on CB. But who would want to?

>Let's face it. Ham radio has become a "gentlemens' club".
Ham Radio is 95% male. 50% are old.

>Only a
>handful are able to pass the initiations.
Actually, these days ANYONE can pass any license class in one day by simply memorizing the license pool questions. They have "license in a day" classes. After these "classes" where one is told the questions that will be selected to appear on the exam, one takes the test. Almost everyone can pass it in one day.

> Now don't get me wrong, I am
>not saying that Ham radio is a bad thing - after all I'm a Ham too
>(N1"XXX").
Ham Radio is not just about passing the license class and following the rules. You must follow the HAM traditions as well. This makes Ham Radio is a cult. Since you have a Ham license, but do not follow this cult, one can say that you are not a "Ham".

>I am trying to point out that there is an alternative form
>of radio operation

Some sort of Alternate Radio Organization should be formed from "Ham" Radio.
There are other non-"Ham" radio Amateurs.

> In a way, that is true because the Freeband is
>talked-on using Ham lingo such as Q-signs, and yes, even CW.
Get rid of those stupid Q lingo.

>Then there is the spirit of the whole idea of "Pirate Radio" - sort of
>a pioneering spirit if you will. Not many people deviate from the
>norm' any more. With the world getting smaller from the information
>boom, more people tend to conform, than tend to express individualism.
Ham Radio is about conforming to the Ham cult. If you don't believe, you are
not a "true" Ham.

>Being a Freebander can give a certain kind of exhileration comparable
>to getting into a car and breaking speed limits (except, at no risk to
>yourself or others).
No need to do anything illegal. Just get a no code amateur license. There is
plenty of room there without going illegal.

>If you really care about the radio, you should
>explore all that it has to offer. After all, staying on the straight
>is narrow... you've gotta travel off the beaten path once in a
>while...
Hams that are appliance operators, contesters, coders don't participate in the
experimentation aspect. Fine, if that's what you want to do. There are many
operator clubs called xxx Amateur Radio Society. But there are very few clubs
for those interested in rf technology.

I and a few others use Morse code on ch. 14 from time to time. There's even an 11-meter beacon utilizing Morse out of CA. These are all legal and use Part 15 devices to transmit on 27.1250 MHz. You'd be surprised what you can find on the CB. (...and LEGALLY at that!)

thanks for all your help. In the process of reading and looking I found another contributing factor. I don't think it is getting enough juice.

I have it hooked in via cig-lighter-plug, as a temporary make sure it works before you drill holes. And I think that is limiting it. I can get the weather just fine, but little to no reception as a CB and no transmit. So I will wire that in hard, as well as change my antenna up a bit.

And keep you all posted, thanks again you have been very helpfull

Perhaps you didn't understand what I said: the call sign "WB4***"
isn't listed. Sheesh, and you call ME a moron...!

>Do you really think I'd give a juvenile delinquent like you my complete call
>sign? No telling what BOGUS Complaint you might make. Keep trying ,your
>showing your "abundance of intelligence" DUDE.... LOLOL

First off, a violation of 47USC2.815 by an amateur isn't exactly a
"bogus" complaint. Second, you are assuming that I would file such a
complaint, since it's illegal to file a false complaint and can lead
to civil charges of harassment. Of course that's only if they don't
find anything during the investigation, which I think they probably
would in your case since you posted the evidence yourself. Lastly, if
being 40 years old is young enough to be a "juvenile delinquent", then
that would probably qualify you an infant, which seems to correspond
to the way you are acting, "dude".

Personally, I couldn't care less if you are a ham or not. But you
brought it up, so what's your callsign? If you can't be honest about
whether or not you are a ham, how would anyone know that you really
have the amp you are trying to sell? Or if you really own it, that you
are telling the truth about it's condition? That's pretty "bogus",
Joe.

Hey, since you don't care about your name, that's a good name for you:
Bogus Joe!

I can't get to any of the web pages because "Bandwidth has been exceeded,
try again in 2 hours".
Never had this problem anywhere else in the last 5 years on the net.

Doesn't sound like a "good service" to me.
I was only using the site for about 5 minutes and saw 3 or 4 different web
pages.

I don't think I'll hurry back.

Better luck next time.

Paul.

Message-ID: <3DD0605B.3095DA04@optonline.net>
Source record: 143743

Its 2030 and the band is quiet. figured i'd hear something on the 40 but nothing. some guy up in bridgeport yakking but thats it. cb is dead in this area with 10 million people packed in around here....
freeband obviously dies when the sun sinks so its basically a wasteland on 11 meters. no wonder telecomm companies look to see what freqs are available to exploit for their next frontier...cb is a prime area for making money as well as the upper and lower freqs outside the designated 'legal ones'.
eventually its going to happen like it or not. what makes more money (and its sad) selling radio gear and the gov getting the taxes or the gov leasing it to xyz corporation for beaucoup bux?????
besides the 'amateur' bands aren't in better shape as they will shrink as the old white guy fades to oblivion and their political strength fades like an 11 year cycle coming to an end....

i've been baggin' this ng for the better part of 8 years so its not like i'm a newbie......
73, jim kp920...

1158. the "troll" defense

Ok, I have the definition of "troll" nailed down---a troll is a regular joe who goes around and recognizes right-wingers for the freedom-haters they are. Don't believe me? Watch when a keyclown tries to get an anti to admit his right-wing sympathies---"troll, troll, troll". Heh heh, this insult slides right off of me.

Troll & DAMN PROUD OF IT!!!

Ya, what Mopar said. I'm a freedom lover who respects the rule of law.
Strange, eh?

This brings up an interesting question - Are Anti's predominantly left or
right wing? I don't want to hear any crap about somebody being a
"moderate" either. No such thing. I say people lean more on one side than
the other. Nobody is straight down the middle. Those that say they are
are avoiding confrontation.

This should be interesting.

Your looking to decouple the feedline, a choke serves the same purpose.

Yep. And why is it a "poor" substitute? If it works, what's wrong with it? A balun imposes loss, and is limited in wattage by it's components.

If you mean "works" as "i hook it up and it more or less seems to function",
then yeah, I guess it "works".

A dipole antenna is designed to be driven by RF current in opposing phase.
Where does the non-driven side of the choke fed dipole get it's excitation?
Driving the other half twice as hard isn't the same thing.

The focus of Ham Radio is to contest.

Huh? I NEVER contest! I prefer experimenting with electronics,
particularly antennas, to see
what works. That statement is completely inaccurate. Some hams like to
just chat with their
friends on a local VHF repeater. Some like to chase "paper"--that elusive
rare country or station.
Others enjoy building. Others like bouncing signals off the moon or seeing
how far they can DX on
VHF.

So you are only a "Technician" class if you did not learn code.
> Then you are above a Technician if you did? Give me a break.

It has nothing to do with "class"; it simply determines the amount of
privileges one has. Imperfect
tho it is, it is intended to allow one to ease into the hobby a stage at a
time rather than being over-
whelmed, perhaps, with all the possibilities.

>
> >. In this day & age, it is obvious that there is no need for

This ham can take it or leave it. It will go or stay, as the case may be,
next year, or the
year after, etc. etc. I don't really see what the big deal is. I didn't
like CW in the beginning,
but, weighing all the things that awaited me on the other side of the
"barrier", I sucked up my gut
and overcame it. Turned out that, after fooling with it, I became quite
hooked on it as I found that
there is a kind of "music" to it. That was in the days of 5, 13, and 20
WPM. I am somewhat tech-
nically inclined and it didn't repel me. I just decided that fulfilling
that requirement was worth it.
It is hard to tell the non-CW person, but 5 words per minute is P A I N F U
L L Y s l o w. It
takes less than 3 weeks, normally, to master it. Once on the other side, it
is difficult not to ask,
"What's the big deal?"

>
> >Old timers swear that it must be kept as a requirement because
> >"the Ham bands will go the way of CB".
> I have heard this phrase also. If this is the only thing that separates
Hams
> from CB, then Ham Radio is truly pathetic.

Hopefully not to be critical, but there are LOTS of things that separate
Amateur from CB because
there is no line of learning, for lack of a better term, such as tests that
attempt to determine if one
knows what impact HIS operations will have on the radio environment and
others' use of it. Or,
perhaps, the books that are offered by ARRL that provide continued education
in various levels of
electronics, emergency operations, and construction. That situation also
relates to the fact that CB
was never meant to "compete" with Amateur Radio as a hobby. CB Radio was
supposed to be
a utility service for the citizen--sort of the cellphone of the 1950s. If
that premise was truly fol-lowed and enforced, (and I know this is a
controversial statement) CB Radio could actually be
abolished because it no longer fulfills its original intent. No, I am not
advocating that; I am just stating that the two services had/have totally
different purposes, and it really isn't accurate to compare or critize
either one based on the criteria that is indigenous to the other.

Besides, couldn't anyone that wanted

would
> want to?
>
> >Let's face it. Ham radio has become a "gentlemens' club".
> Ham Radio is 95% male. 50% are old.

So can you PROVE that CB radio is not 95% male, or that 50% aren't "old"?
That is a
very broad statement full of prejudice--just like saying all CBers drive
rattly old cars and smoke
cigars. It isn't true. I have logged LOTS of 8-10 Y/O Extras.

There's nothing wrong with that. Most affiliations, whatever they are, tend
to develop certain
ways, speech patterns, words having meaning peculiar to that affiliation.
It is human nature.
What is different about certain Amateur traditions than the familiar, "10-4"
that CBers adopted
as if to associate themselves with law enforcement or rescue organizations?

>

Exactly. I just cannot agree that "freebanding" provides some sort of
thrill that the broad
parameters of Amateur Radio provide without going outside the law for the
sake of that itself.

>

That's outside my own experience. My club "imports" all sorts of
technological topics at
every meeting such as "fox" hunting (to get rid of those who would encroach
onto repeaters
or HF frequencies without license), building small projects, or explaining

how certain electronic
principles work.

Does this seem unlikely to you?
Many antenna designs are poorly done copies of someone else's work, done with no understanding of first principles. A dipole without a balun will function, but it's no longer a dipole really.

> channel 20, but I just turned the knob all the way up.

If the meter was new, I would suggest that the radio is not putting out
the full power that it should. You should easily reach the end of scale
on "CAL".
Are you doing this on AM, with a dead key?

The only other option is a problem with the antenna, or coax connections.
This can sometimes give a meter problems seeing the outgoing power. If
you are sure your coax connections are OK, assume a low output.

> Then my SWRs on channels 1 and 40 respectively were 1.2 and
> 2.2.

Seems more likely that your CB is not putting out the full power.

> So I'm going to play with the antenna tomorrow to see if I
> can get the readings to match better. That CAL was without
> audio. I also used the power meter and
> keyed down it's showing between 2 and 4.

Was that a separate meter... don't rely on the meter on the radio.
If it is a separate meter, and that is 2 on one channel with 4 at the
other end.... then the radio is most likely tuned wrong.

> I called the shop that peaked
> and tuned it and he said it has a Mod kit installed too. I'm not
> really sure what kind of Mod kit it was he put in it, that's not my
> area of expertise,

Can you find out... and let us know. Someone on here will know what it is.

> but I trust the guy, he's really good. He said the
> Mod kit was affecting the reading on the CB's SWR meter, and to test
> it with a separate meter.

They all seem to know what they are doing.
At the first place I ever worked, the Managing Director gave me a piece
of advice about dealing with the customers that I still remember...
"Always sound like you know what you are
doing... even if you don't."

I have seen a TV (rental) engineer walk into a house, tell the customer "it's your aerial, madam"... and walk back out. Ask any TV engineer if slow field flyback (white lines across the top of the screen) can possibly be caused by the antenna!!!!
But, to the customer, he sounded like he knew what he was doing.
It was a rented TV, no money to be made from repairs, just costs... just like guarantee work.

I have also been in a CB shop when the "engineer" was telling a customer that his output was NOT low, he HAD tuned it correct, he has £1000s of test equipment which CANNOT be wrong. He convinced the poor sod.
The truth... he had one old and broken multimeter, one old cheap swr meter, one ancient frequency counter... and tuned the radios on an ANTENNA. All the equipment was old, virtually worthless, and would NOT have been calibrated from when it was new.
Oh, and his "workshop"... a small (6' x 3') cupboard under the stairs (complete with sloping ceiling).

> I'm also not sure if the cheap ass coax I
> had between the meter and transmitter was affecting the SWR.

NO.
Anything between the CB and meter will not affect the "reflected" reading. Large losses will affect the "forward" (CAL) reading but, with a short length like that, only if you have bad connections. If the lead came ready made and new... look elsewhere for the problems.

Can you borrow a "dummy load" from anyone?
If so, plug one into the SWR meter in place of the antenna. If the CB is OK, you will easily set the "CAL" to end scale and the SWR will be close to 1:1.

Regards,

Peter.

Hi Tom.

They can be useful, esp for design work... but a bit of an overkill for a
CBer, who just wants to connect up and talk. He really doesn't need
that much information... just if the antenna is set up right.

He could be better off getting a dummy load and checking the output
on that first. I suspect that the "tune up" was not that good..

Regards,

Peter.

> always have a supply of charged batteries. So that's not a problem.

It also depends upon how much you transmit with it, and how much of the time
is receiving.

Most radios will go up a small amount, but I don't believe that any extra
Watt or two that you may get would make a noticeable difference either to
the battery consumption... or the distance you get.
Even with a homebase setup, an extra Watt or two will go unnoticed.

Also, it is likely to be pointless adding extra power when, with the puny
antennas handhelds have, you will still not receive very far. There is one
further problem... more power output will lead to more heat generated.
Handheld radios usually have limited space, little heat sinking, and
trannies that cannot get rid of heat that well. Good heat dissipation
requires space.

I am NOT against a bit of "tweaking", if it is done correctly, safely, and
will gain something. But I believe that you are chasing something that will
not bring any noticeable gain... and could possibly damage your radio.

If you must tune it up, check out the DXzone site... there are links to all
types of radio sites.
http://www.dxzone.com/
Also, this site has some mods on, but I don't know if that radio will be
included...
http://www.radiomods.co.nz/index.html
Or do a Google search for the radio... the information should be out there
somewhere.
http://www.google.com/

What is it?

The function of a balun is to keep the feedline from radiating by reducing the common-mode, or "antenna" current on it. In the case of coax, this flows on the outside of the coax. Winding the coax into a coil makes a broadly resonant circuit which performs this choking action.

Really? I've never contested. In fact, in my opinion, contesting brings
out the worst on-air manners as they all pile on top of each other
looking for those all-important points. Not unlike certain CB channels.

>
> >Ham radio is not for everyone simply because they cannot learn the
> >Morse Code.
> Exactly, Ham Radio tends to emphasize Morse code.

Some old timers emphasize morse code. The old "I did it so everyone else
must too" attitude. There are a great many hams today, that don't care
for CW, and happily operate on VHF and higher, utilizing more modern
modes, as well as HF rag chewers.

> Since you have a Ham license, but do not follow this cult, one can say that you
> are not a "Ham".

More stereotyping, due to the "CW prejudice". Ham radio is what you make
of it, If you don't like the "stuffed shirts" associate with other
people. Believe me, there are many people who don't act the way the
stuffed shirts do. Most of us hang out off of the beaten trail. We use
mostly 2 and 6 meter SSB, 220 and 6m FM, and an occasional romp on 10
meters.

> >Then there is the spirit of the whole idea of "Pirate Radio" - sort of

I HATE contests. I'd much rather have a long, liesurely ragchew than try to see how many different stations I can work, with the only information being exchanged is callsign, RST, and possibly your state. Contests also fill up frequencies that could otherwise be used for ragchews, so one has to go to the WARC bands for that.

Tom

Message-ID: <17016-3DD10912-366@storefull-2311.public.lawson.webtv.net>
Source record: 143674

Everyone has been witness to Dave Hall's admitted intentional disrespect toward amp users and behavior unbecoming a hammie.....I think (but what do I know?) it's time to return things to their original owner, such as the hypocrisy Dave sets forth. I always knew he was lying hammie playing both sides of the coin.....

--
I know you didn't ask, but since I own an M-200, and ran tests on it, my findings are that the amp is capable of about 400 watts on the Bird (at 13.8V) full bore drive on SSB (30 watts), which will easily push it into compression. That's why I use this to determine the absolute "big number". With this in mind, I would not be running it with a 350 watt carrier, as it leaves only 50 watts left over for modulation swing. At that point, the amp cannot reproduce an acceptable signal, without severe distortion. I run my M-200 at about 50 watts dead key, which will allow for the proper 4:1 modulation power ratio. You could probably push the carrier level to close to 100 watts before the distortion becomes too objectionable, but you are losing in modulation power, and will show a backward swing on the RMS Bird.

That's one function of a balun.
Another is to convert an unbalanced signal into a balanced signal.
Arguably, this is it's primary purpose since the name is "BA:Lanced to
UNbalanced" transformer.

We have added another "soundbyte" to http://newcastlescan.tripod.com

This soundbyte is of a pursuit in the Lake Macquarie suburb of Dora Creek.
The offender has hit a power pole.

the file is titled chasecrash and is found in the Tuscanblue section of our
soundbytes page.

Please sign our guest book

You know, I used to think you were some pencil-necked internet geek, but after this, it's clear to me that you don't have the slightest clue how message routing works, or what goes on with the various servers that make up a news service, or what things can be stored in your newsreader settings. But oh, that's right, you don't have a "real" computer, just a webTV wannabe. Maybe that's just as well, as it seems that you wouldn't be able to set a real computer up properly anyway.......

>You know, I used to think you were some >pencil-necked internet geek,

Nah....you're thinking has always been skewered.
I don't have the time or patience to such things.

>but after this, it's clear to me that you don't >have the slightest clue how message routing >works,

Never claimed I did.
Nevertheless, it has nothing to do with you inserting lines into your headers, such as you have done, and denying you even know what they look like. As usual..your own words....

> or what goes on with the various servers that >make up a news service,

Make up your mind. You claimed YOU didn't know how your ISP accessed servers, now you are claiming *I* don't know.
No matter, the only thing that is consistent on all your posts are lies.

>or what things can be stored in your >newsreader settings.

Stored? STORED?
No, Dave, the "spew radio" was INSERTED by yourself. To claim you don't know what your headers look like and to watch you now flail your arms about trying to clean it up by claiming it was "stored" is hugely entertaining. It may indeed have been "stored", but you still had to insert it. The claim you didn't know what your headers look liked was another lie you were caught in again...deal with it and move on, or continue to attack my person and character instead of the integrity of the message like all have come to expect from you when you have no point to make other than to share the anger you feel when your lies are questioned.

>But oh, that's right, you don't have a "real" >computer,

And we are all certain of how my webtv is solely responsible and to blame for you lying about headers and morals concerning those using amps and freebanding.

>just a webTV wannabe. <

Whose access has never changed. You can not claim the same. Well, you can, matter of fact, you DID, but it too, was shown to be,..
alas,,,another lie.

>Maybe that's just as well, as it seems that you >wouldn't be able to set a real computer up >properly anyway......

You sobbing pathetically about webtv isn't taking the spotlight off your hypocrisy and
lies concerning so many things, but attacking everything about a person except the message and truth of their post is just about what is expected of you. Not only do you consistently reinforce John Q. Public's image of hammie radio operators, you seem hell bent on preserving it.

It will, but it's probably better to use a direct connection to the battery.

> It's either the radio,or antenna.

I agree, it wouldn't kill his receive unless the jack isn't putting out
enough current for some reason.

He says he can receive WX stations but not CB. Could be the antenna's
shorted and he's picking up the stronger WX station through the short. Or,
the antenna could be hooked up right and there's not any CB activity. But
he should be receiving static during the night and skip during the day.

The Wx stations are on a totally different band, and different receiver.
(they are FM as well)
You could slope-detect the FM on an AM rx, but I'd bet they use a separate
receiver.

CB rx could be fried.
There could be a feedline or antenna problem that has a lot of loss at 27
MHz, but not so much at 164 MHz.

Also be aware, the NWS transmitters are pretty powerful, because the spec
for nws receivers allows them to be pretty "deaf". Keeps the receivers cheap
to make.

I honestly don't know if people are going to be willing en-masse to pay for satellite radio like they do satellite or cable TV. In fact, we're cutting back our cable TV a bit because there's never anything decent to watch whenever we do watch TV. Personally I'd be happy with the three off-air stations we receive locally. I just don't know if the general public is willing to pay around $300 for a receiver and then $10 a month for subscription fees.

The reason I don't think people will be willing to pay for radio too is that people don't listen to the radio like they watch TV. Most people spend time in front of the TV set, but only listen to the radio while in the car or need some background noise. Those who listen to talk shows can already pick them up on local AM stations. However, I think satellite radio is good for people who travel a lot (truckers, salesmen, etc.) and get bored with local radio or can't find decent stations to listen to.

Only time will tell if this venture pays off. Right now, XM is still a few years away from turning a profit.

Personally, as far as pay radio is concerned, I'll give it a pass. I've got plenty of other radios to keep me occupied.

I seriously doubt that the FCC will take away the CB frequencies and sell them off to the highest bidder.

Mainly because there are probably millions of CB's in use out there, and the CBer's are not going to give them up. The FCC can't enforce the rules for the CB band as it is now, so they won't bother trying to if they allocate the freqs for something else.

What I stated sometime back was the fact that the general populace often has
a "certain" image of
CB ops--particularly when that public has had their TV paralyzed by
interference. We both know
that is not true, nor it is true that ham radio is filled with 50% "old".
Let's face it: we ALL get old.
I got my ticket in my late 30s. Why is it that age is the last hold-out of
discrimination considering it
is something that will eventually be the fate of all of us?

Joe, read your post again. V e r y c a r e f u l l y. You might learn something. WB4 does not necessarily imply any particular area. Also, WB4 does not imply any particular class of license. When I had WB2OSP, I could have been a technician (coded, of course), general, or extra. Since then, one could have moved anywhere (at least in the lower 48) and kept that callsign. There are WB8*** callsigns in the greater Rochester, NY area (likely others too; I just happen to talk to WB8JPX upon occasion over the 444.850 repeater). Now tell us again about that "abundance of intelligence" ....

Regards,
Jim

Yes, I wouldn't suggest anyone going out and buying a $200-some analyzer
just for one application, but if he knows someone who owns one he could
possibly borrow it.

> He could be better off getting a dummy load and checking the output
> on that first. I suspect that the "tune up" was not that good..

You're probably right. However, the antenna analyzer would tell you in an
instant whether or not the problem lies with the antenna.

His best bet is to connect his power meter between the radio and a 50 Ohm
dummy load and see what the forward power says.

Tom

If he can't find one, he could build one from two 5W 100-Ohm resistors wired in parallel between the coax shield and center conductor. Should be able to handle the power out of a stock CB.

Yes, I know all about powerful. I used to live about a mile & a half from a local WX transmitter and it used to cause really bad intermod and images, even down on the HF band. I had really bad intermod on my scanner from it until I put a high-pass filter inside it. For some reason, the VHF WX station was mixing with shortwave signals and producing images in the scanner. I forget how far down the HF band the transmitter put images. The only solution to that was to move.

Yea..I know what he said. I was more taking issue with the generalization concerning dxers he made.

>Hey, want to place some bets (for a friendly >beer just in case a bunch of us **ever** get >together)?

Some of us already have. I like the idea of a summer weekend somewhere in the Carolinas...maybe Tennessee or even Va.......all rec.radio.whatevers could attend.

>My gut feeling is there is more in common >than not between cbers and amateurs.

Yea, as so many are already aware, many hammies enjoy the freeband and many freebanders are hammies..some just are a bit more honest about it than others.
Same for cbers (many are hammies) and the same for hammies (many are cbers).

>There are loonies on both sides (and both >sides are quick to point out the faults of the >other). The bet? To the nearest year the >incessant flames finally die out (eternity, >anyone?).

There is already a pool for this. It's called the rec.radio.cb death pool,..the only difference being you get to select an actual person (a regualr among the group) instead of a year and your name goes on a block corresponding with your selection. There was even a webpage on geocities last year,,,I thought it was posted here..I'll see if I can find it again. Good thing is, only the person running the pool knows who you select (unless you tell someone your choice) and so far, that integrity has not been compromised. When certain folks die off, the flames will cease. New trolls will eventually take their place, but must find new avenues to explore. An analogy that can be drawn from the behavior of such folks, can also be compared to the service so many feel they must defend, (almost as if someone were putting it down).....it's old and stale.
Then again, as you note...loonies all around...but it's all in good fun. When it stops being fun.....the situation will rectify itself.

I get the same sort of problem from a 10kW FM broadcaster about 2 miles
away, but I knock him out with a stub filter. Properly tuned, you'll get
40dB attenuation.

And how is a ground plane not sort of like a dipole? Hmmm, come to think of
it, a quarter wave is just that. The counterpoise is the other half of the
dipole.

Why should we pay for it? Get the damn advertisers on board just like land
based radio. Doesn't seem that far fetched, does it?

I'll go on record (along with you, perhaps) as saying that it is long past due for both cbers and hams to stop stereotyping each other. As far as being old ... it sure beats the alternative ;)
73 from Rochester, NY

>That's one reason I'm in here.
>I enjoy the discussion, as long as we can stay >away from the blatantly illegal.

That is what moderated groups are for...tailored a bit more to those who choose limitations on their speech or seek a sanitized version, however slight it may be. Talk to Frank..he feels the same way..claimed he was starting an all legal rec.radio.cb group about a year and a half ago. Went as far as annointing himself the great exalted garn and moderator of his new group and asked for followers. As you see, he's still with us.
What is blatantly illegal in the US is not always illegal in other areas of the world. We must remember this is not solely an American group..it's worldwide.

> "moderate" either. No such thing.

Ditto. I can't imagine any anti's agreeing with me that things like
walking naked in public, saying "fuck" on TV, & DUI sans accidents
should be LEGAL (& I don't want to hear any of that "lobby for it,
then" jive), & I can imagine quite a bit... Maybe a place like Iraq
would be an anti's idea of paradise, where unlicensed radio ops face
the firing squad. Hell, I'll be glad to help 'em pack.

I guess the root of the problem is that anti's are mostly just
law-boys who get a kick out of making "law" into just another fake
religion & using it to play judge-jury-&-executioner to people they
don't like... which means damn near everybody who doesn't agree with
their straitlaced views of how they think the world ought to be.

Guy

P.S. That "do not feed the troll" stuff doesn't work... we trolls fix
our own meals & don't need any handouts. Damn things're probably
poisoned, anyway.

mellow my razorback friend. its not inconceivable as its already happened with other frequency allocations. the brits are also thinking along the same lines as recent posts in uk.rec.radio.cb mention the same thing. face it, is cb as popular as it was in the '70s? not. what's to stop the gov from squeezing the underused freq's for a monetary gain? maybe the money gained will stop another tax reduction for the rich.....73, jim kp920....

I've got a batch of CB synthesizer crystals that I'm about to throw. From stock to off-band, pll and regular. I'm cleaning house. I also have many Ham Rig, scanner and walkie crystal for off-band services. All are in small parts cabinets and fairly organized. I'm looking for $200.00 for the batch and I'll pay the shipping. There are hundreds overall. I also have a B&K2040 and and B&K1040 to enhance any CB repair bench. I'm looking for $250.00 for the pair and there are manuals along.

But it is contiguous. That's the only advantage, and they should make the best of that fact. I can listen to CD's without commercials. If they want users to pay for commercial free airtime, that's fine, but they wont make it if they don't offer commercial included airtime also.

No.

You have either an open, a short, or an inadequate groundplane.

Check for opens or a short between one end of the coax and the
mount. If all is well there, make sure the mount is electrically
connected to a fairly large piece of metal.

>Its high all around but higher at 40. I tried everything including
>repositioning the K-40.

1. If we can assume that the antenna and coax are fine, and......

2. The SWR ratio increases with an increase of frequency, then.......

The antenna sees to much capacitance to ground. This can occur if
the antenna is not free and clear of nearby metal objects. An example
would be an antenna mounted on the rear bumper of a van. A quick
fix would be to shorten the antenna. This shortening would increase
the capacitive reactance while it decreases the inductive reactance.
The end effect in this shortening is bringing the antenna up to a
higher frequency resonance.

HOWEVER a K-40 antenna has a capacitor included internally for
matching purposes. The capacitor can be fried if the antenna was
subject to high doses of power. I believe the effect of a fried
capacitor on a K-40 would be to have a K-40 that was resonant
much higher in frequency than normal, so I don't believe this OPEN
capacitor scenario is your problem. I wonder if a partially fried
capacitor can increase its capacity and force the antenna to become
a lower frequency resonant antenna like the one that you apparently
have?

From: Lou <tech@dp.net>
Message-ID: <aqsopuvmf1@news.dp.net>
Source record: 143794

Hi,

It's been a good while since I've fooled with much less seen a Browning set of any make... My memory of some of them even fails me now. My question...

MARK IV and MARK IV-A

Unless I am mistaken, they were basically the same, but with some slight difference - thus the A suffix. IF I am correct, what was that difference? If I'm wrong, then what were the "differences"? Does anyone have any schematics, etc for the Mark IV - A?

Please reply directly as I don't always get to read the newsgroups.

Thanks.....

Lou/Tech@DP.NET

Dave, Twisted has never figured out how the headers work nor how message routing is done. Don't waste your time trying either, he wont believe you. Over the past year or two several people have pointed out to him how far off the mark he was when accusing people of various things related to forging messages on the group and it didn't do any good.

BING!

It's possible the antenna itself is bad as well, is there another antenna around that you can try on this mount?

What's the mount mounted to? Sometimes hatches and such aren't very well grounded at RF, you might need to install a grounding strap or two.

Another HYPOCRITE.
I thought you blocked me... your filter still doesn't work.

Anyway, if you can let go of your anger long enough to think straight, you will realise that I was just posting correct information about CB rules. Someone posted incorrect information, so I have posted the correct facts.

What is it about those facts that upsets you?

They are totally ON TOPIC, not an argument... just facts. I thought you was keen on legal information being posted here.

I know, I said what CAN be done... not what cannot. Too positive... huh.

Brainbuster.

Read it again.
I was replying to the "comments", not to Aaron himself... but to
the WHOLE GROUP.

Are you really that stupid, you cannot understand?
Let me put this in simple language for you...

I read a post from RICHARD CRANIUM.
In that post I saw incorrect information.
I had a choice...
Ignore it and let everyone believe the
false information,
or
Post the correct information.

This is a NEWSGROUP, so, I posted the correct information.
Quite simple really.

> is your name landshark,

Do you have a problem reading?
Look at the name at the bottom of my posts. If you still
need an answer to that question... go back to school.

> if you really wanted him blocked you would not tak to him

Can you not get your head around the difference between e-mail
and newsgroups?

This is a PUBLIC forum. Messages posted here are PUBLIC,
for anyone reading them.
If I was sending a message to Aagent Aaron, it would be by e-mail.

You can whine, squirm and seethe all you like... but I will
post messages whenever I wish to.
If that doesn't suit you... then block me - I don't keep changing

my header.

Brainbuster.

FMRNYCER,
From the sound of your original post, and the later
one about the SWR on ch-40, it certainly sounds like the
'whip' is too long. One thing you might want to check
before cutting the whip, you do not want the butt end of
the whip to extend down into the coils of the base loading
device. That does 'bad' things. Using the full length of
the metal ferrule at the top of the 'base' is okay though.
I'd also cut in short 'bites' rather than large 'chunks'.
'Doc

AM Modulation - VR13
SSB Power (ALC) - VR4 VR5
AM Power - VR14
RF Power Meter - VR8
S Meter - VR10
Squelch - VR12

The TRC-480 used a Sanyo LC7113 chip that could be modified by changing the loop mixing crystal but not really worth the effort. It also shared the design with the Realistic TRC-459.

A friend of mine had a Mark 4-A and I remember it being LED readout and the mark 4 was standard. I don't know if that was the only difference or not but it is a start.

The word I have heard is that it is already in the works for a wide-band satellite down link. That is all they will have to do is ban the sale of new ones and sit back for 10 years. Then ban the use for another 3 to 5 years and track down the offenders and seize the equipment. It will take about 20 years to clean up the 11 meter band but they can do it and most likely will unless CBers can prove that they have a useful reason, not available in any other part of the spectrum for taking up that much space.

> good.

The more he posts, the more obvious it becomes, that he's off the rails. There are certain lines in a header where you can insert your own message. That's configurable in most newreaders. It's no big secret. Yet Twisty seems to think that it's significant, that I can put "Spew Radio Inc." in my organization line. In fact it has probably been there since I installed this newsreader (And changing newsreaders is akin, in Twisty's mind, to changing "access"). I can change it on every message I leave along with other lines, if I were so inclined. But what does that prove? I'm still using the same ISP, no matter what strange demons are slithering through his little mind.

If he would spend more time thinking about what he posts and concentrating on comprending what other people say, rather than looking for elephants under his bed, he'd be way better off.

That's why I'm not going to bother responding to him anymore, it's pointless. He still doesn't get it, the joke's on him, but there is only so much fiddle playing someone can do, before you get tired of hearing the same old song and dance routine.

If he wants to keep searching google for every post that I've ever made, and thereby validating, for the world to see, his obsession with me, more power to him. I've said nothing that I regret. I debate on principle, which is why he never understood the difference between how someone personally feels about something, and what the law says.

The fact that I've owned and operated equipment illegally on CB in the past, in no way changes what he does NOW in the eyes of the law.

> ps - Democrats tax the rich and give to the poor....

.....and the lazy, the unmotivated, and illegal aliens.....

> Republicans tax the poor and give to big business (and the wealthy).

I'm not going to let that slide. Where in recent history can you find
any tax legislation where the poor were singled out exclusively to be
taxed, where the proceeds go to those who already have plenty of money?

It's faulty logic, if for no other reason than the poor and middle class
make up the majority of the consumers in this country. Take away their
buying power, and the economy crumbles, and those "rich" business exec's
stock options go into the toilet.

And don't give me that democratic BS that tax cuts only benefit the
rich. Sure, if you only put in $1000, and you get 1% back, it will work
out in a dollar amount to less than if you put in $100,000 and get back
1%. But it's all relative. The rich paid more into it in the first
place, so why should they not expect to get more back out? The richest
5% of the people pay in over 50% of the taxes, simply due to their large
taxable income. That $300 (or $600) tax check we got back last year will
mean a lot more to a person who makes $15,000 a year, then to a person
who makes $150,000 a year. So why would you think that these tax cuts
favor the rich? The bottom line is that this country is supposed to be
the land of opportunity. Yet there are many of us who chastize those who
have worked hard, and have become rich, and even demand that they
forfeit a larger percentage of the "spoils" of their labor to prop up
those of us who chose to be lazy and are unwilling to advance beyond
manual labor jobs. It's not the fault of the rich guy that the poor guy
is poor, so why should he be punished for it? Propping up the poor, only
breeds continued dependance on government and its "gimme" programs.
There's an old saying; "Give a man a fish, and he eats for a day, teach

a man to fish, and he will eat for a lifetime". Instead of giving the poor money, they should be investing in education.

> Neither party seems to actually be inclined to reduce government.

The republican congress took a pretty good stab at it in 1995, when they took over majority control. This effort, called the "contract with America" was largely responsible for the so-called budget surplus that Clinton tried to take credit for.

Sends a message that moral character and civilized behavior are not
important in our society.

> & DUI sans accidents should be LEGAL

Driving under the influence impares judgement and reduces reaction time.
The "accident" is just a matter or time. Many innocent people have been
killed by drunks who didn't even realize that they had impared control.
Those who exercise such blatent irresponsibility and disregard for the
well being and safety of others should, at the very least, have their
driving privileges revoked.

> I guess the root of the problem is that anti's are mostly just

As opposed to guys like you who think that they should be allowed to do
whatever they want, whenever they want, and to whomever they want, and
the hell with other people's rights?

That's a great way to run a civilized society........

Just be careful not to use wirewound resistors (The kind you most likely
will find in that power rating, the square ceramic type), as the winding
of the wire ads inductance to the equation, and will result in a high
SWR reading.

I usually use 10 470 ohm, two watt carbon resistors in parallel. That's
more than enough for a CB.

>Dave, Twisted has never figured out how the >headers work nor how message routing is >done.

Never claimed I did. Really don't need the routing process if y'all would behave yourselves. Nevertheless, Dave Hall claimed he didn't know how the routing process worked, either. Suddenly your arrogance is showing....guess you're still upset over all those coincidences pointed out when you lost your funny access sites to this group at the same time you broke the TOS for Supernews, bignet, cotse, idt, etc.....you guys look well together,,,both y'all's words have bitten ya' in the azz....

>Don't waste your time trying either, he wont >believe you.

Of course he won't be believed,,,..he, as you, are a confirmed liar. Besides, Lelnad logic has been exposed....one can not rewrite the rules of logic to conform to your personal flawed exemplary examples of nonsensicals......

"So "common sense" is nothing more than a belief held by a large group of people, and has little or nothing to do with the true nature of things at times."

>--
>Leland C. Scott
>KC8LDO

Yea....? You're threat to the group concerning Dogie spamming us if I didn't go away was nullified..hence you're often being referred to as "impotent". Of course, you are always free to post from the email addys you claim weren't pulled....take your pick..any two out of the bunch that you claimed weren't pulled from you. Shouldn't be too hard for a compooter gradjate like yerself, eh?

So "common sense" is nothing more than a belief held by a large group of people, and has little or nothing to do with the true nature of things at times.
--
Leland C. Scott
KC8LD0

NCI Member

And the crowning moment of all, from "Arron"..a neatly wrapped serving of your nocoded (save for Dave Hall, N3CVJ who merely mimes you and Dogie) empty heads on a platter. Nice to see the "parish of twisted" supporting each other so vigorously......

"If you got rid of me, you'd still have Sparky, Leland, George, Doug, Dave Hall, and many others to contend with. -A "

But let's not forget, "getting rid" of people originated with you and Frank and Dogie...blackmailing the group if certain people didn't hush up or go away you would spam and flood us...your death threat....Dogies threats of violence....your quote of shooting freebanders (would you start with DAVE HALL, N3CVJ self-confessed freebander and illegal amp user, or does he get a pass 'cause he is a hammie?)..etc....

>I'm still using the same ISP, no matter what >strange demons are slithering through his little >mind.

Demons? Hahah..is that like Lelnads saucer people?

>If he would spend more time thinking about >what he posts and concentrating on >comprending what other people say, rather >than looking for elephants under his bed, he'd >be way better off.
>That's why I'm not going to bother responding >to him anymore, it's pointless.

Really, it's not. Your behavior has been indicative of everything I have claimed of you.
Your past posts prove you a liar, hypocrite, federal lawbreaker, character of extremely low moral, and your associates and friends..man,,,I don't even wanna go there.....

>He still doesn't get it, the joke's on him, but >there is only so much fiddle playing someone >can do, before you get tired of hearing the >same old song and dance routine.

Yea, catching in you in so many lies and setting you up with your own words can get tiring with someone who can't see the forest through the tress.

> ouIf he wants to keep searching google for >every post that I've ever made,

Not every post you ever made, Dave.
The three that I posted serve nicely and are quite adequate at showing the real you.

>and thereby validating, for the world to see, >his obsession with me, more power to him.

It's never been an obsession Dave, and unlike you, It's never been personal. Lie, and it will be pointed it out.

>I've said nothing that I regret. I debate on >principle,

You've said alot of things Dave, and many many of them are self-contradictory.

> which is why he never understood the >difference between how someone personally >feels about something, and what the law says.

Awwww...I hate to break it to you...but your feelings have no place concerning the law. Never did.

>The fact that I've owned and operated >equipment illegally on CB in the past, in no >way changes what he does NOW in the eyes >of the law.

What I do shouldn't concern you. This was never about me. Each of your posts you sink further by attacking me. The irony of one licensed for communication suffering the greatest deficit in such is manifesting again.
Besides, you claimed you were but a child, a young man, you even claimed it was over 15 years ago that you were "enlightened".
As always, your posts shop you lied.
WHAT you lied about, is irrelevant. The fact remains,,you are a habitual liar. Is it surprising you felt the need to share with us the status concerning your sex fiend friend you had a cb hack shop with? I guess it is, when one stops to consider Leland's homosexuality evidenced by his redundant inquiries directed toward me concerning my underwear..it is of little wonder you guys hit it off so well and support (hhahaha) each other.

The high swr is a result of the antenna being mounted to close to
the body of the van, at least 2/3 of the whip must extend above the body of
the vehicle.
The antenna is getting a reflection from the body and running the swr too
high, a different mounting location is in order such as the mirror bracket.
this is how i set up my wifes van and it works beautiful.
Secondly the K40 is a coil loaded antenna, Francis hot-rods are cut to
resonate on the CB band and will give you a near perfect match when mounted
properly with the correct length of coax.

Also, do not attempt to read the swr with the linear turned on, this will
give a false reading because the linear will drive up the swr by itself.
Actually the antenna should be tuned using a MFJ analyser and dont
pay attention to the swr once the system is buttoned up unless it's
extremely high which would indicate a different problem altogether.
Use enough coax to reach from the radio to the amp. and enough to reach from
the amp. to the antenna unless you are using a Francis.
Note: Coax length does not change swr, but it can change the meter
reading....we have hashed out the whole coax length thing before so lets
leave it alone..if ya really want to learn about it search Google for the
posts.

Subject: Bill Clinton's Role in 9/11 revealed

On Election Day Americans repudiated Bill and Hillary Clinton -- thinking
Americans realize that Bill Clinton was MORE RESPONSIBLE for 9-11 than the
current recession than George Bush

The Media Won't Reveal Bill Clinton's Role in 9-11 . . .
..but NewsMax has released a sensational new book edited by Christopher
Ruddy
and Carl Limbacher that blows the lid off of the media cover-up.

Find out about the best selling "Catastrophe: Clinton's Role in America's

Worst Disaster"

You can even find out how to get this book FREE by clicking here:
http://track.offerservice.net/track.php?c_uid=120412609&c_lid=3967

"Catastrophe" begins on January 20, 1993 when William Jefferson Clinton took
the oath of office as the 42nd president of the United States of America.
Clinton swore to "preserve, protect, and defend the Constitution of the
United
States" from enemies both foreign and domestic.

During the next eight years, Bill Clinton would preside over the most
corrupt
administration in American history and would go on to become only the second
president in American history to be impeached.

When Bill Clinton took office, American supremacy on the world stage had
never
been so great and unchallenged. Our military was without equal. The economy
was beginning a record boom.

Soon after Bill Clinton left office, Americans began to discover his bitter
legacy.

Even as Clinton was leaving Washington, the American economy had begun to
move
into a serious recession.

And America's belief in invulnerability was shattered on September 11, 2001, when 19 Arab hijackers slammed civilian jets into the World Trade Center and the Pentagon.

As "Catastrophe: Clinton's Role in America's Worst Disaster" demonstrates, the
events of September 11 not only were predictable after eight years of Clinton,
but they also could have been prevented.

"Catastrophe" exposes what really happened during the Clinton years, and how Bill Clinton and his administration systematically undermined America's national security by emasculating the U.S. military and the nation's intelligence agencies.

Bill Clinton made America vulnerable to attack.

"Catastrophe" offers many new revelations about Clinton's role in 9-11 ... click here:
http://track.offerservice.net/track.php?c_uid=120412609&c_lid=3967

Here are just some of the revelations from Catastrophe:

** Clinton's own admission that he could have extradited Osama bin Laden from
Sudan - but he didn't because he felt bin Laden was not a threat! If you don't
believe this, read his verbatim comments from our exclusive tape recording!

** A senior CIA officer goes on record to reveal that Bill Clinton helped Saddam Hussein by allowing him to illegally sell oil - and make billions to stay in power.

** Clinton adviser Dick Morris says that Clinton was warned about the terrorist bombings against American troops at the Khobar Towers - and he ignored the warning!

** The FBI and CIA could have easily foiled the 9-11 attacks - but were negligent as two known terrorists gained entry into the U.S. with the CIA's full knowledge. They would later participate in the 9-11 attacks.

** FBI agent Coleen Rowley says the FBI could have prevented 9-11, but refused
to get a search warrant on one of the 9-11 terrorists.

** NewsMax broke the story that Bill Clinton tied the hands of the CIA and FBI
Hear from agents on the inside who broke the story on Newsmax and reveal what
really happened.

** Bill Clinton refused to require driver's licenses to expire at the time of
expiring visas. If he had done this, one of the 9-11 terrorists would have been arrested or deported.

** The 1996 Clinton-Gore airline safety commission set the stage for 9-11.

** Why Clinton's adviser Dick Morris says Bill Clinton's affair with Monica Lewinksy helped Osama bin Laden survive and plot 9-11.

** Read Bill Clinton's shocking statements about America's guilt in 9-11 - he even blamed America for 9-11 and cited our treatment of the Indians and Muslims during the Crusades!

** A secret 1994 terrorism report warned of suicidal hijackings - and Bill Clinton ignored it.

Find out more about "Catastrophe" and its revelations, click here:

Nothing wrong with economy when it works well. The Dentron GLA-1000
family of amplifiers made FCC legal spec as sold stock. We do not directly
compare them to high priced power tubes.

First off, the Dentron shipped with D50 type tubes in place, not the 6LQ6
which is one of a few possible drop in replacements at reduced ratings. The
original D50 tubes were spec for the amplifier.

While the Svetlana Bulletin is a start, it is not complete and should require
a rewrite. Much of the text information is dated or not so good. I directly
address many of the missing issues in my revised Dentron GLA1000
text on the htpp://sonic.ucdavis.edu server Amateur Radio Page.

Svetlana has as track record of problems, some business, some technical.
Hence we do not see them nearly as active in the US. Those issues are
for another time...

Notice the Svetlana data sheet says the EL-509 and the 6kg6 are
interchangeable. The 6kg6 was designed as a horizontal sweep tube,
the EL-509 has listed rf applications, yet they are the same basic
tube. Also notice how they use the mentioned tube in a grounded
grid linear rf amplifier.

It just depends on how you look at the end result

Then it's not a dipole anymore.

There's an interesting evolution, if you compare dipole, "ground plane", Discone, and horn antennas. Not a whole lot of difference between any two steps, but they are all different antennas.

>power increase.

That's right. All you're reading is the ratio of forward to reflected
voltage, and that ratio only changes with power if something is going wrong.
Like arcing in the matching coil, for instance.
Or maybe the SWR meter is hosed. It dosen't change with power on my Bird.

>Actually the antenna should be tuned using a >MFJ analyser and dont pay
attention to the >swr once the system is buttoned up unless it's
>extremely high which would indicate a >different problem altogether.

If you were using a tuner, this would be right, because the tuner would
present a conjugate match.
If not, you'll want to tune the antenna for the best radiated power, which
might not present the lowest SWR.

Hams shouldn't get angry about your post, especially when you can pick up a 3-500Z amp such as the Drake L4 for only 500 or 600 dollars. This amp, of course, covers all of the amateur bands. I am not sure why folks seem to think that the ham community has a problem with CB folks. We were once exclusively on the CB freqs, and many of us still are (me included).
You will probably have to do something about that price, if you really want to sell it!

Pete KE9OA

Good for you Pete! But you haven't been on this group
for very long I guess. There are certain troll like individuals
that have taken it upon themselves to be enforcers for the
FCC here. As such they constantly complain that if you
put up an ad like this "here" it is the wrong forum and as such
you are obviously trying to sell it to cb'ers. Also some of these self
proclaimed vigilantes are hams with a chip on their shoulder and some that
don't even use a cb or are even ham operators whine about these things. So,
most Hams aren't
even concerned with the CB bands, but in this group you
will find a large majority of hams, wannabe hams, that have
nothing better to do than "Troll" while some Hams here are
only concerned with "their spectrum " of activity.

Just watch what kind of responses this post will get,
you'll see what I mean.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Honestly?

A K-40 mounted this way is not much of an improvement over a dummy
load. A shorter antenna magnetically mounted on the roof would
actually work better.

As far as a DX-400 ? I am not familiar with this but I wouldn't put
more than 200 watts through a K-40

P.S. Your K-40 is probably not fried. It takes a continuous key up
of power to heat the capacitor up enough for it to pop apart.

I only tune the antenna to the center of the bandwidth which in this case
would be 27.205Mhz. and let the swr fall where it may, if nothing else
was wrong the swr would be lowest at this point if the transceiver was
tuned to 27.205Mhz. and remain relatively flat at either end of the band.
His problem is not antenna length but rather antenna location, i believe we
agree here.
I'm sure your familiar with SWR versus Power Loss and the fact that
SWR is directly related to Impedance, having said that we know that
(The Source will not deliver maximum Power to the the Load until the
Impedance of the Load mathes the Impedance of the Source).
also known as the Conjugate match (courtesy of Mr. VanHorn)

Frank, ... or sparky, What ever news group ID your using this week. You probably win the contest for shear bulk poop posting in so many threads. So lets go through some of your book theory rants here and deal with them in the real world. I posted a quite lengthy reply once before, but somehow it went poof. So I'm willing to give it another go. After this follow up, I plan to limit my replies to you as you must be on your pooter all day long to type in your mistakes..

: "yeti@REMOVEcet.com" wrote: (a lot of babble)

> In <aqe9ru$bg8$1@woodrow.ucdavis.edu>, Skipp

>
> The equipment authorizations for those amps have expired, or did you
> forget about that little detail?

No detail required... authorizations for new hardware construction maybe. As originally certified for the applied service, type accepted equipment legally installed and operated should be just fine... and legal to remain in service. The responsibility for legal operation is the duty of the licensee. Until I hear otherwise from the FCC, I'll continue to call it as I see it.

> <snip>
> >I have an actual FCC Radio Service: IB License license in my hand, against
> >my better judgement, I posted the actual FCC file number in that thread

> >it doesn't exist or is not possible.
>
> No, I said that the license can't be located by the file number and I
> asked for the callsign. Again, what's the callsign, Skippy?

Well Frankie I was reluctant to give out the file number, I'm certainly not going to post the call sign on a news group. I'm able to look up files on the FCC pages, I found yours... Forget trusting the web for the final word, the paperwork matters. I have the truth in hard copy and I'm fine

with it.

> > Hard copies are the bottom line
> >frankie...
>
> And like I said before, I don't have a hard copy. As far as I know you
> are looking at a sheet of toilet paper.

So you would then look at the FCC web page and pronounce me a liar because you can't find the magic IB number online; despite the many times I've mentioned
that the FCC interchanges IB with the IG designation on their web page. Nothing
will ever make you happy. If I posted a copy of an actual FCC License somewhere,
you'd claim it was altered. So forget about it Frank.. I have the truth in hard copy here and nothing will ever make you happy about it. Radio Service IB is alive and well and currently licensed.

> <snip>
> >I actually have a lot more background in the area than you could ever hope

>
> >No television I've heard of uses the 6146 tube as a sweep tube. There
> >were some older televisions that used the 6146 tube as a horizontal
> >oscillator and or horizontal oscillator amplifier.

Pretty good cut and paste from two different posts. You failed to mention the second sentence was from a much earlier post and it's original complete context. In that thread I re-posted someone else's previous text and had no reason to doubt his statement that the 6146 was used in a Heathkit Project TV. Why not, the tube would work just peachy in the application. No one gets hurt, no real bad information gets out the door. The point it proves to me is that one should never assume blanket statements from others without the proper homework first..

You however mentioned in more than one post, that the grid of an rf amplifier tube can be tied to the plate for triode mode operation. A big, big, big boo-boo. The result of your posts would cause harm to the tube and possible harm to the circuit and the operator as the amplifier melts down big time.

> which demonstrated your ignorance of the subject. You didn't know

> where the 'sweep' came from in 'sweep tube': I had to explain that

> they were named because they were designed specifically for use as
> horizontal deflection amplifiers, i.e, television 'sweep' amplifiers.
>

Sure I do... but you like reading your own news group theory posts so
you can feel good about yourself... I don't choose to write a book chapter
history so you can play with formal name labels. A hard line label
history adds little to technical details.

>
> 2. You didn't know what the term "low-mu" described; namely, the
> amplification factor of a triode. Not only that, but you used the term
> to describe the triode operation of a sweep tube while saying that it
> wasn't operating as a triode.

Again, just because I or others don't choose to jump through your name
all list, doesn't prove anything. You jumped back and forth from cathode
driven to grid driven circuits so much, I had a hard time trying to figure
out what point you were trying to make. When I called you on it, you
danced and sang the "conventional" and "classic" label blues. It's quite
clear to most experienced amplifier people that AB1 and AB2 g-grid
amplifier circuits are for the most part, built along two different circuit
layouts.

You claimed that triode amplification factor was listed in your book
as "u" and that tetrode/pentodes were rated in transconductance Gm.
Some how you failed to mention triodes also have transconductance, so
now we can say that "you didn't know it". Get off the "you didn't know
it" because "you didn't mention it" nit pick... you waste a lot of time.

>
> 3. To defend your remark that a triode-connected sweep tube wasn't
> operating as a triode, you tossed out the term "reverse screen
> current", totally ignoring the fact that reverse screen current occurs
> because of secondary emission from the plate, a problem which doesn't
> exist in a sweep tube because of the beam deflection plates AND
> because the screen is grounded for operation as a TRIODE, which cannot
> have ANY screen current, forward OR reverse.

Pretty good try at turning things around Frankie... but again no cigar. At
no time did I ever associate reverse screen current with triode operation.
You do a pretty good job of making this stuff up as you go along..
By the way, when I mentioned for you to personally relax and "hold your
reverse screen current", you claimed it didn't exist. Didn't you write
something along the lines of "now there's a new one"..?

It appears to us that at that time, you appeared to know nothing about
reverse screen current in tetrodes. In follow up posts, I mentioned that
you might go research reverse screen current. At no time did I ever mention
reverse screen current in triodes or sweep tube circuits Frankie...
cute but no cigar.

> 4. You didn't know where the 'beam' in 'beam tube' came from, but
> instead thought it was synonymous with 'power tube'. In fact, you
> specifically stated that "the 6146 is a beam power tube, which can in
> the generic sense serve as a 'sweep' tube", which propted me to
> explain that the 'beam' tube is a subcategory of 'power' tubes, and
> the 'sweep' tube is an application-specific power tube, be it a beam
> tube or otherwise.

Not quite, but your kind of hard to follow sometimes as your posts tend
to wander off the main topic quite a bit. When talking specific about rf
amplifiers, I do tack on the entire proper label of beam power tube. No
foul should be called.

If you ever update your electronics back ground to include current technology,

you'd understand the Sweep Tube Label can be applied to a family or group of
similar tubes.

The 6KG6 was probably designed for horizontal deflection "sweep" circuits, a
drop in EL-509 direct replacement was never designed for TV circuits, but
has direct rf amplifier applications. I have no problem calling the EL-509
a Sweep Tube as it walks and talks the part very well. In short, they
directly
interchange or are considered the same tube.

Multiple examples of Sweep Type Tubes or the easier named (by most
people) Sweep Tubes never designed or applied to Horizontal "TV" or
deflection circuits exist. Go ahead and stick your head in the sand over a
dated formal label. Most of the rest of the world has no problem using the
Sweep Tube as a generic type label, it fits very well.

>
> 5. You didn't understand the meaning of 'grid-current distortion', how
> it's created, or even how to read an EpIp graph to determine the
> relative smoothness of a grid current transistion.
>

You just love to see your own writing Frankie... Actually, you want to
play up the distortion value to say sweep tubes are unusable in linear
rf amplifiers. I claim they are quite usable and the distortion is enough
to disqualify sweep tubes in the application. The big picture is what
goes out the pipe (antenna connector). Many an FCC legal sweep
to amplifier made it to the market through the years.

> 6. You have shown many times that you didn't even know the difference
> between Class AB1 and AB2 operation, the difference being that AB1
> draws no grid current while AB2 does. In fact, while reading through
> the previous posts, it seems that you were under the impression that
> AB1 meant common-cathode while AB2 meant grounded-grid. For example,
> while discussing neutralization, you state that it is "not required
> in a properly designed AB2 amplifier", which is totally disrepsective
> of the fact that an AB2 amplifier can be common-cathode, and therefore
> require neutralization.

Man you are long winded... Not quite Frankie... I was trying to nail you down a few times to see if you knew the major differences in AB1 and AB2 circuit layouts and their specific operational considerations. But you danced and sang more than you provided specific examples.

In the real amplifier world Frankie... AB1 is common cathode circuit layouts and AB2 is a grounded grid circuit. AB2 is also possible in common cathode circuits, but we almost never see AB1 operation in grounded grid circuits.

Don't play around with parts of sentences Frankie... I try to be clear and include the term, well built "AB2 Grounded Grid" circuits should not require neutralization. The issue is to include grounded grid which you conveniently left off.

> 7. You have the mistaken belief that the 'flyweel effect' of a tank
> circuit is a cure-all for non-linearity in a linear amplifier, when in
> fact it CANNOT reduce or eliminate grid-current distortion. I needed
> to explain that in order to be linear you need at least 180 degrees of
> undistorted conduction time, which you cannot achieve with grid
> current distortion.

Wow, you are a piece of work frankie... somehow you're going to find a text where I say "cure-all"..? I don't think so. Actually to detail out the issue, the input tank circuit flywheel helps reduce "half cycle loading", with resultant IMD benefit. One must always keep in mind that the drive is actually applied across the cathode and grid. Inclusion of a AB2 cathode tuned input tank circuit, Q of 2 is almost a must to achieve good IMD performance. In your verbose analysis of that KLV brand amplifier.... you called the tuned input coil a choke or shunt. You can't even call them when you see them Frankie'boy.

I explained to you that the conduction angle for AB* operation is about 210 degrees standard to be called "AB mode". The amount of distortion present does not disqualify Sweep Type Tubes and many Sweep Tubes from linear applications, nor does the distortion prevent the conduction angle from reaching ~210 degrees. Plain fact, jack...

> 8. You didn't know that 'grounded' in 'grounded-grid' means a signal
> ground, and not necessarily a DC ground.

Sure I do, but you never bothered to mention ac or dc paths until I pointed it out. There are different types of grounded grid circuit layouts. Some only play well with specific geometry types of tubes as built. You don't appear to know the difference between them without looking at a book.

> 9. You didn't know what ALC circuits are, calling them "linearity
> detectors" (your own terminology), and saying that ALC circuits are
> "bad news" because of their "time constants". Of course I set the

Nice try Frankie (or Sparky) , I referred to the Galaxy Sweep Tube linearity circuit and possibly the Collins Linearity circuit and the fact that some ALC circuits are built along similar circuit layouts. No big deal really, but

ALC circuits are for the most part, not great poop prevention circuits, nor
should they be relied upon. Due to time constants and delays, the ALC
loop reacts after the poop has left the building.

> record straight that ALC circuits are basically RF compressors which
> require attack and decay time constants, and are so used in the radios
> you claimed had "linearity detectors". You also claimed that ALC
> circuits are "dated technology" despite their continued and effective
> use in amplifiers and other circuits.

It's poor operating practice to assume the ALC loop will react fast
enough. Couple the ALC action delay time with any amount of speech
processing and that much more extra dB's of poop are already out the
door before the circuit reacts. For a measurable amount of time, the
amplifier is overdriven resulting in crap production. ALC is dated
technology, modern radios have power level controls which still can't be
trusted without testing. One recent generation of Japan made HF radios
is know to output very large rf spikes. A review of that topic thread
can be found at the www.contesting.com achives. You are just
plain out of touch with the real world.

>
> 10. You continue to claim that sweep tube amps meet or exceed FCC
> specifications, yet you never state those specifications or the
> conditions under which the amplifiers passed, you never post any noise
> figures, and you never make any comparisons to amps that use RF power
> tubes.

I don't compare them to specific RF power designed tubes, in amplifiers
for the most part. The proof was in the many FCC legal Amateur Amplifiers
produced and sold throughout the years. I ran across some notes the
other day from a four hole sweep tube amplifier I tested some years ago
which in the Amateur application had spurious products better than 32 decibels

below peak power of a two tone test signal. The even order products
were dealt with higher Q tuned circuits, the odd order products were not
a significant problem. T'was a good sweep tube circuit...

> 11. You clearly do not understand the cause of parasitic oscillations,
> stating that it is due to the nature of a tube, and that the 6146 and
> 4CX250 were 'seriously' prone to VHF parasitics. I needed to explain
> to you that they are caused by resonant conditions within the circuit,
> not the tube itself. I also explained why sweep tubes are NOT immune
> from parasitics because of their poor VHF response as you claimed.

You clearly need to get a new book Frankie... Parasitic issues are
both a function of the tube construction and the circuit. There are well
known histories of grounded grid amplifiers which have horrible parasitic
problems based directly on both the applied tube's VHF gain and adjacent
circuit vhf paths. Tubes like the 8877 are actually engineered and
constructed to avoid vhf parasitic problems.

The 6146 and 4cx250 family of tubes require serious parasitic prevention
"circuit practices" (as do many others). Other tubes (8877) in rf circuits

don' have nearly the parasitic baggage concerns of the 6146/4cx250b by
design.

No tube is immune to parasitic... but the sweep tube in grounded grid
circuit will rarely, if ever "go there" in a well designed and built circuit.

> 12. You didn't realize that if a receiver can hear the background
> noise on a frequency that a pre-amplifier does not improve the
> signal-to-noise ratio at all, and will actually ADD to the noise with
> it's own circuitry.

So now you qualify your earlier statements by adding in "background noise".
Let's move past your diversion BS to state the facts. Not everyone has
a hot HF radio receiver, some of the newer generation radios are in fact
pretty
numb (I've measure a few Icom 706MkIIG radios, they are numb as heck
on the lower HF bands compared to other radios). Low noise fet preamps
are easy to make and apply; plus they are also low in parts cost.

I would be willing to say that many of the radios would benefit from the
inclusion of a simple auto tr switched low noise receive preamplifier in
the amplifier. So it couldn't hurt to go for it.. You've got to also hear
them to actually work'em
Companies like Sinclair, Telewave, Angle Linear, ARR sell thousands
of fet preamps. Most all the weak signal group members I know run new
radios, fet preamps and large amplifiers, and they use the whole package.

> 13. As stated before, you didn't understand why a grounded-grid
> amplifier does not require neutralization, citing the reason as 'grid
> screening'. I had to explain that it's not required because the
> amplifier is non-inverting (which you also didn't understand), where
> the voltages on the input and output are in phase, and therefore cause
> no regenerative feedback that would require neutralization (which is
> where the term originates -- the 'neutralization' of regenerative
> feedback!).

Here is where you really fall short Frankie... Go back and do the home
work. HF and MF frequency amplifiers have two resonance's IN THE
ANODE CIRCUIT, the VHF resonance is formed by the Anode-C, the
Anode leads, the dc blocker caps reactance, and the tune-C.

Grounded grid circuits benefit from shielding. You also failed to
mention electrode spacing in any of your posts so we just state that
" you don't understand it".

The non inverting nature of the layout at HF/MF a whole different
animal vs when your talking VHF stability response. You above
statement clearly indicate you have little actual knowledge or experience
in the subject. Hit the books Frankie, you fell flat on your face this
time.

> 14. You are under the mistaken impression that grid-to-plate
> capacitance changes depending on whether the amplifier is

> grounded-grid or common-cathode. Of course it doesn't, because it's a
> characteristic of the tube, not of the circuit. I explained that you
> might be confused because the -input- capacitance is different, and
> that's because the two different circuits use different parts of the
> tube for input.

Not... we are still talking grounded grid AB2 amplifiers. I try like heck to have you stay on a specific circuit... all you have to do Frankie is give us a clue as to what part of the book your reading from when you type it in...

Another trip and fall for you Frankie.. Let me state it again for you.

The Grounded Grid Amplifier have or include the advantages:

The output and input capacitance's of a stage are reduced to approximately one half the value which would be obtained if the same tubes were operated as a conventional neutralized amplifiers.

The feedback capacitance within the stage is the plate to cathode capacitance which is ordinarily very less than the grid to plate capacitance. Hence neutralization is ordinarily not required in the the HF region.

The tendency toward parasitic oscillation is greatly reduced since the shielding effect of the grid(s) are effective over a broad range of frequencies.

> 15. You stated that "exciter feed through power of the example AB2
> grounded grid amplifier is a big time 'freebie' you don't see in AB1
> circuits", which only reinforces my theory that you really don't
> understand amplifier classes of operation. Grounded-grid amps require
> drive power because the input is the cathode, which must conduct if
> the tube is to work at all. Input power of a grounded-grid amplifier
> is always carried to the plate regardless of class of amplification,
> and regardless of grid-current.

You try and make some type of point from the wrong direction Frank. Let's be clear about this, not how you like to read into things. Feedthrough power is a benefit of the grounded grid rf amplifier operating condition.

Actually he label is a bit mis leading (but you knew that of course)... the drive power appears in the g-grid plate load circuit after being converted to a varying dc plate potential effectively in series with the main HV power supply.

HERE'S THE BIG ONE FOR YOU FRANKIE...! CHECK IT OUT.

The converted drive power serves a useful function in linear service because It Swamps Out The Undesirable Effects of Nonlinear Grid Loading

.... and presents a reasonably constant load to the exciter.

Ta'da..! Frankie...! and how would you like your crow served today...?

> 16. You claimed that grid-current distortion only occurs in a
> grid-driven circuit. Of course that's not true, as grid-current
> distortion occurs whenever grid current occurs, regardless of whether
> it's grounded-grid or common-cathode.

See the above for more crow Frank... perhaps some wine with your bird..?

> 17. You claimed that putting a resistor in series with the cathode of
> a grounded-grid amplifier will improve linearity, when in fact it does
> nothing but reduce the output power and dissipate part of the input
> power. I also pointed out how cathode resistors are commonly used to
> improve the linearity of a common-cathode amplifier, but not for RF
> amplifiers because it would unground the cathode. Such practice is an
> audio technique that you mistakenly applied to an RF application, and
> also to the wrong type of amplifier.

You are wrong crow breath... at least in this post you have properly
written the statement as "resistor in series with the cathode". Now
